DEAR SIR: Referring to your notation on our letter of the 11th inst., requesting that you make a report on Force & Steel, a new building material firm starting in business in Trenton, to the effect that we are represented by J. B. Richardson & Son exclusively.

If you are satisfied to let this concern do business in Trenton and know nothing about them, we are not, and we must insist that you find out all details connected with their business, what brand they are handling, and advise us of same. While it is not our intention to solicit their business at this time, we must be fortified with this information.

Yours very truly, Allentown Office, by —— ——.

Security Cement & Lime Co.

Baltimore, Md., February 26, 1918.

Mr. John K. Barbour, Hagerstown, Md.

DEAR MR. BARBOUR: John Kelly seems anxious for security to go in on the Davision contract, and thought he might put it in cotton. He said Tidewater, as well as Atlas, is keen for it and he thought we ought to make him a special price which after considerable parleying I did. I made him a price of $2.18 in cotton and $1.93 in paper. Understand that the first shipment would not go off until the 8th of March, and this would require 10,000 barrels. The balance, 20,000 to go later. I think we have no chance whatever to get this business, but Mr. Kelly will let you know as soon as he gets anything definite and then you can confirm in writing.

Very truly yours, Loring E. Cover, President.

The Addison

Middlebury, Vt., Mar. 28, 1918.

E. H. Button, Brandon, Vt.:

As you remember that Mr. Button called up last Friday the 22d and claimed that he had covered a local contractor on work to the extent of 3 cars at the old price. We told him that he could have but one car at the old price, and that I would explain when I saw him.

His attitude is this, he is a director in the Bank where the work is to be done, and he will surely sell the cement. Our quotation dated Mch. 21 arrived the 22d and the Edison Co. who quote him regularly did not quote him until Mch. 23, which quo. did not arrive until the 25th, and that were he an Edison account instead of an Iron Clad dealer, he could have had time to be covered at the old price of 2.40 between the time that our quo. reached him and Monday the 25th when the Edison quo. arrived. I enclose the Edison quo. in question. I told Button that you would let him know direct just what your decision was.

Button seems quite positive in his statements and gave me the impression that we were in danger of losing his business. He is about the only dealer in town.

Donahue.

Important Change in Bag Terms

Effective May 1, 1918

Some dealers in and users of cement are not returning our bags but are using them for other purposes and in some cases are selling them. New bags are very hard to get and the present price is about 27c each. If we are to continue in business our bags must be returned. Therefore on and after this date the following regulation will be effective on all shipments:

When cement is shipped in cloth sacks, the cloth sacks containing the cement are not sold, but remain the property of the Cement Company. The purchaser agrees to return all of said sacks to the Cement Company within ninety (90) days from date of shipment of cement by Cement Company.

A rebate of ten cents (10c) for each sack returned will be allowed by the Cement Company from the invoice price of the cement when the sacks are returned, within said time, to the Cement Company in good condition, freight prepaid, subject to the Cement Company's count and inspection.

[fol. 2480½] Included in the price for cement is a charge for the use of the sacks. All sacks not returned as above shall be considered as bought by the purchaser and shall be paid for at the rate of fifteen cents (15c) each additional; payment to be due one hundred days from date of shipment of cement by Cement Company. Purchaser also agrees to pay fifteen cents (15c) each additional for returned sacks which have been wet or otherwise abused and rendered unserviceable.

The dealer should by all means arrange to protect himself as far as his own customers are concerned, either by charging 25c each for the bags or by holding his trade to the terms shown above.

August 22, 1917.

Mr. R. A. Pruden:

It would appear from an examination of the daily report sheets, that the other companies doing business in territories east of Pitts-

burgh are beating us out on new contracts. The indications are that there is going to be very little winter business, and we are especially anxious to get contracts upon which we can furnish cement between now and April 1st next. We therefore urge that you give special attention to such work.

In an attempt to make up an estimate of the probable shipments by months during January, February and March, we would appreciate your sending an estimate of the probable shipments into your territory during that period.

Yours very truly, Frank H. Smith, Sales Manager.

[fol. 2481½] DEF'TS' EX. No. D-424

The Atlas Portland Cement Co.

New York

For the Attention of D. H. MacFarland.

New York, July 26, 1917.

In line with our conversation of this morning and yesterday—I believe it would be good business for us to offer a substantial premium to the district making the best showing in securing business during August, September and October—especially business which will augment our shipments during these months.

I believe that the award of this premium should be based on two factors—

1st. The percentage of trade business in proportion to the trade in same territory in previous years, and in proportion to the general trade business in the territory where it is possible to get a line on this condition. For instance, if all our districts are off 50% except one, on their trade business, and if conditions in that territory [fol. 2482] are similar as near as we can determine, to the other districts, and yet the trade business is only 20% off, the difference would undoubtedly be due to superior activity on the part of the district making that good showing.

2nd. The largest percentage of contracts placed in the territory covered by each district, giving special consideration to contracts which will be active before the first of November.

A committee should be appointed in the general office to determine the award of the premium, and various factors should be taken into consideration by this committee in connection with the specific work orders reported to the two associations—East and West; whether or not orders placed with competitors are over-estimated or bona fide, and to what extent; also to what extent orders placed with us have been influenced by conditions removed from the control of the district office; also orders placed with our competitors where our dis-

trict office had no chance to secure the business. (This last classification should be small in total).

My suggestion would be to have the premium announced immediately to district managers, and tell them the general outline under which we are working; also tell them that the prize will be awarded in a lump to the district, to be divided up by the district manager according to his best judgment. I believe we should also incorporate in our announcement to the district managers the fact that we expect to get our money back; in other words, we want this prize to stimulate more than enough business to reimburse us for the actual money expended.

[fol. 2482½] It might be advisable to offer two premiums; that is, one on trade business and the other on specific work, and in view of the rather dissimilar conditions between Eastern territory and Western territory, I think we should offer two sets of premiums—one for territory west of Ohio, and one for territory east of and including Ohio. This is not in accordance with our present organization, but I believe that the conditions in the Ohio district are more nearly typical of those in the East than they are of those in the West, although in view of the building-up process we have been undergoing in Ohio, we might feel it necessary to handicap the Ohio district by some arbitrary figure.

I have no suggestion to make regarding the amount of the premium except that it should be large enough to really stimulate activity clear down the line through the district organization without being exorbitant or extravagrant from our standpoint; in other words, each salesman and individual in the district organization should feel that his share of the premium, if he earned it, would be well worth working for.

I have a definite thing in mind in putting the division of the premium up to the district manager. If the district manager is the right sort, I think he will divide the premium up so as to exclude himself from the division. If he does this without any suggestion on our part, I think it will be up to us to give him a special personal premium. If he is inclined to be grasping, he will take his personal premium.

LGM-MH.

[fol. 2483] DEF'TS' EX. NO. D-425

July 31, 1917.

C. A. Kimball, L. G. McConnell:

Just before the President left on his trip to the Front, he discussed the necessity for making every special effort to get our shipments for the balance of the shipping season, that is, the months of August, September and October, pushed just as hard as possible so that the gain we made early in the year will not be offset by a loss for the balance of the season.

You know that in the month of June we just got over the line by being a little better than June of last year. July will be from 6%

to 10% less in total shipments than July last year. This, despite the fact that our contract bookings both East and West were very much heavier than last year, which you will see means that dealers' warehouse trade has fallen off tremendously.

Now, as an extra incentive for the special push for the next three months, the President has authorized me to say to you that he is willing to put up a cash bonus for the best percentage increase of shipments as compared with the percentage of shipments each District has borne to the total shipments for the fiscal year to date. One prize for the best Eastern District, and one prize for the best Western Dis-
[fol. 2483½] trict. The main factor in determining the bonus winning will be the amount of new business taken that actually moves during the three months, and the surest way to win will be to get the maximum in dealers' immediate shipment, or fifteen-day orders. In making the award we will consider the present business actually on our books in relation to the perecentage it bears to the total bookings.

This amount of money to be divided by the winning District among the men who helped make the District the winning one, and will be an amount in addition to any regular bonuses that we may determine the different men have earned by their year's performances.

I wish you would send a copy of this letter to each of the District Managers, and let them start right away in the competition.

Yours very truly, —— ——. DHM/MK.

Nazareth Cement Company

Philadelphia Sales Office

Date: 6/6/18.
Subject: Wright & Collins.

To Mr. S. J. Fehnel:

Kindly change the price on our order #8233 to $2.77 delivered. For your information, this one cent difference on our orders for

Mr. Watkins territory is to meet the competition of the other mills who are quoting on the Universal basis. The Universal rate is 48¢, plus 4¢ increase, 40¢ for bags, and $1.85 Universal base makes a delivered price of $2.77 or 1¢ less than our price. When our order #8233 was put in, we had not discovered this fact.

F. M. Hoover.

[fol. 2485] DEF'TS' EX. No. D-428

New York, July 9th, 1918.

Mr. Geo. J. Bickel.

DEAR SIR: I want you to pay particular attention to obtaining new dealers and as much open-market business as possible. In looking over the list of territories I find that your territory January 1st to May 31st only shows 9,000 barrels of open-business. Five other territories show over 10,000 barrels running from 14,000 barrels to 21,000 barrels. The real test of a salesman is the number of new dealers he obtains and the amount of open-business he puts on the books.

Very truly yours, Vulcanite Portland Cement Co. —— ——,
Manager of Sales. AM.

[fol. 2485½] DEF'TS' EX. No. D-429

Alpha Portland Cement Company

Change in Bag Terms

On May 1, 1918, this Company sent you a circular calling attention to revised bag terms. There were two reasons for making these revised terms. The first was that there had sprung up throughout the country a number of dealers in second-hand bags, who were offering more for bags than the so-called redemption value fixed by the cement manufacturers; the second reason was that bags were not being returned to us promptly and consequently replacement cost was excessive.

We are pleased to note that the users of our product are cooperating with us very efficiently and bags are now being returned in goodly numbers.

We do not wish to impose a burden on dealers handling our product in competition with those manufacturers who do not make a sufficient charge for replacing bags which are not returned. We, therefore, withdraw that portion of our circular which provided for an additional payment of fifteen cents for bags not returned within ninety days, and will not collect this charge on any shipments of Alpha Cement made since the first of May, 1918.

Alpha Portland Cement Company.

Easton, Pa., July 15, 1918.

[fol. 2486] DEF'TS' EX. No. D-430

The Atlas Portland Cement Co.

New York

For the Attention of Mr. Holman.

New York, January 25, 1919.

When the daily reports of the Protective Association come in we analyze them by districts—that is, we check out the total number of contracts place- in territory covered by each District, and the number of Atlas contracts secured in the territory.

I see this analysis every day or two and keep right after the District managers on the basis of these analytical figures. I also of course, write the District Managers regarding specific orders as they go to our competitors, with a view to making it very hard for them to lose an order. I am attaching some files of last summer which will show you the method of operation in the correspondence between here and the District Offices.

I do not think that we can go into much more detail on this check-up without running into the danger of putting a premium on [fol. 2486½] alibies, which I do not want to do. I do not want to put the sales staff too much on the defensive nor to encourage them to spend too much time or thought on the contracts that have already gone, except on the basis of correcting our methods of solicitation of business. We try not to have anyone on the staff whose intentions are not of the best—that is, we do not want to have any salesmen or district managers who are not doing everything in their power to secure business, and my idea of the check-up of the orders is always to direct their energy, time and attention to securing business which has not been placed, rather than a backward look toward orders which have already gone.

L. G. McConnell. LGM/WH.

[fol. 2487] DEF'TS' EX. No. D-431

Lehigh Portland Cement Co.

Buffalo, N. Y.

March 27, 1918.

Mr. B. L. Swett, Eastern Sales Mgr. Lehigh Portland Cement Co., Allentown, Pa.

DEAR SIR: I have just been talking to A. E. Dye, Forestville, N. Y., and was informed that he purchased a car of Universal Portland Cement yesterday at the $1.50 mill base. Evidently the Universal Company have not changed their price, as I have not seen any of their quotations so far quoting the $1.90 price. For your infor-

mation, J. E. Van Dusen, Gowanda, N. Y., has also bought a car of Universal at the old price and you no doubt are familiar enough with the Gowanda situation to know how strong he is for Lehigh. This for your information.

Yours very truly, L. E. Browning.

[fol. 2487½] DEF'TS' EX. No. D-435

Lehigh Portland Cement Co.

Sales Department, Official Communication

NOTE.—Answers to these questions must be mailed to me Saturday of each week. This is to keep in close touch with conditions in the field.

B. L. Swett, Eastern Sales Manager.

Week ending Saturday, April 6th, 1918. Salesman: Browning. Office: Allentown.

1. What information regarding competitors or quotations did you get during the week?
I am sending Alpha quotation four cents below our price in Wellsville, N. Y. I have already reported numerous cases where Universal have taken business on the $1.50 basis several days after the price had advanced.

2. What special inducement of any nature are competitors offering in your territory?
The above.

3. State what disadvantages, if any, caused by the actions of this company you are laboring under in meeting competition.
Number one.

4. Give names of competitors' salesmen that you have met during the week and information dropped by them.
Bickel, Vulcanite.

[fol. 2488] 5. Give the complete history of any complaints that you may have on competitors' brands of cement.
No complaints.

6. Are your customers satisfied with our deliveries, packages, handling of complaints sent to us, tracing of cars when requested by them, etc.? If not satisfied give names of dissatisfied customers and state reason of dissatisfaction.
Yes.

7. What suggestions have you for improving our methods of handling business in your territory?
None.

8. Do you know of any contemplated work in your territory that is not followed up by inquiry?
I do not.

9. What is your opinion as to the outlook for business in your territory during the next thirty days?
Business has been very good for the past two weeks, but most of them have their spring orders in, and the next thirty days will see a lull in order taking.

10. What seems to be the opinion of the trade on our advertising? How can we improve it?
I called on three County farm bureaus this week, all of whom are interested in our advertising, and these Bureaus certainly can do us a lot of good with the large farmer membership which they have, and they would be very much pleased if we considered *do* a little advertising in their monthly papers to the farmers.

[fol. 2490½] DEF'TS' EX. No. D-438

Apr. 20, 1920.

Mr. E. P. Alker, H. C. Merritt:

We are in receipt of your letter of Apr. 19th and note what you say in regard to Mr. Fanelli. We have written him today asking him when we may expect payment for car of cement which he obtained from the Fireproof Construction Co.

We would like very much to know where you got your information from that the Atlas Cement Co. are shipping cement over the N. Y. N. H. & H. R. R.

In regard to price of cement to dealers f. o. b. Yonkers, Mount Vernon, White Plains, Tuckahoe, New Rochelle and Port Chester, please refer to our notice of April 7th in which we stated that we had increased our price to $2.00 Lehigh Valley Base and $2.10 Hudson Base. Lighterage rates from Hudson, Alsen and Catskill, N. Y. to water delivery points in Greater New York will be 30¢ per bbl. You will note however that this increase is 5¢ per barrel more than the price quoted by the Lehigh or Atlas Companies. We have therefore decided to meet the prices quoted by Lehigh & Atlas to those dealers with whom we have been doing business.

Also note that were all rail rates to Lehigh Valley points adjacent to the water make a less price the rail rates will govern. This will apply to some points on the Hudson River and Staten Island.

Yours very truly, —— ——, Sales Manager. EPA:MC.

For the sake of brevity and economy, we have discontinued the use of such phrases as "Dear Sir," "Yours very truly," etc., in our correspondence with the company's representatives.

[fol. 2493½] DEF'TS' EX. No. D-443

November 3rd, 1919.

Mr. Frank L. Leach, c/o Hotel Bond, Hartford, Conn.

DEAR LEACH: I would keep in touch with Bradlee on the Hartford Rubber job, because he is keeping after Mr. Foss in Boston. I can not do anything from here, but he can be of material help to you from the Boston end.

I do not think you can do anything with the Aberthaw Company, because from the best reports I can get, they have closed for their season's requirements with the Portland Stoneware Company, I think.

Now in regard to the Connecticut State Highway work, I am not prepared to go to the $2.92 price, but probably will know more about this shortly. We, of course, wish to meet competition, and I guess in order to do so, we will have to sell them at the $2.92 price. You mention that the war tax is exempt. Do you mean by this that the Government is refunding this war tax, or just how is it done?

Tell Mr. Jackson the next time you see him that I was very glad to hear from him and that I shall be very glad to see him on my next trip to New England.

Yours very truly, Charles H. Cox.

Lehigh Portland Cement Co.

Sales Department, Official Communication

NOTE.—Answers to these questions must be mailed to me Saturday of each week. This is to keep in close touch with conditions in the field.

B. L. Swett, Eastern Sales Manager.

Week ending Saturday, April 20, 1918. Salesman: Browning. Office: Allentown.

1. What information regarding competitors or quotations did you get during the week?

Saw two quotations quoting five cents per barrel above our price. Edison and Hercules.

2. What special inducement of any nature are competitors offering in your territory?
None.

3. State what disadvantages, if any, caused by the actions of this company you are laboring under in meeting competition.
None.

4. Give names of competitors' salesmen that you have met during the week and information dropped by them.
Did not meet any.

[fol. 2494½] 5. Give the complete history of any complaints that you may have on competitors' brands of cement.
No complaints.

6. Are your customers satisfied with our deliveries, packages, handling of complaints sent to us, tracing of cars when requested by them, etc.? If not satisfied give names of dissatisfied customers and state reason of dissatisfaction.
Yes.

7. What suggestions have you for improving our methods of handling business in your territory?
None.

8. Do you know of any contemplated work in your territory that is not followed up by inquiry?
I do not.

9. What is your opinion as to the outlook for business in your territory during the next thirty days?
This week was exceptionally good in view of the low priced cement in so many warehouses. Got 12 cars on the high price, with one new town lined up.

10. What seems to be the opinion of the trade on our advertising? How can we improve it?
No unusual comments this week.
Remarks: ——.

Yours very truly, Browning, Salesman.

The Commodore

Pershing Square, New York

Oct. 3/19.

Mr. Chas. H. Cox, Sales Mgr. Phœnix Portland Cement Co., Phila., Pa.

DEAR MR. COX:

* * * * * * *

I had a long talk with Mr. Saunders at the Capitol today He showed me a straight quotation of 2.92 from the Edison Co. signed by Bruff from this Boston Office. Also showed me one from the Windsor Cement Co. same price on Dragon & Alsen. Also had one from the Lines Co. Meriden on Allentown, these were all made for cement F. O. B. Thomaston, Ct. Now Lehigh quoted 2.94 same [fol. 2495½] as we did, and owing to a mixup they had with Lehigh they are going to give them 5M bbls. or half of this order, and Edison gets the rest, and he states that is all they will get.

* * * * * * *

I am

Yours truly, Frank L. Leach.

[fol. 2496] DEF'TS' EX. NO. D-446

Phœnix Portland Cement Co.

Philadelphia, Pa.

Oct. 14, 1919.

Attention Mr. Cox

GENTLEMEN: In my conversation with Mr. Masserman today he told me that another cement company had offered him cement at a less price than 2.92.

At the present time he would not state who it was but I believe it to be the Edison Co. as he is giving them little business at the present time and they feel rather upset about it, so he told me.

Yours very truly, Preston E. Bradlee.

Oct. 17, 1919.

Mr. Preston E. Bradlee, 3 Strathmore Road, Brookline, Mass.

DEAR BRADLEE: I have your note of the 14th about Masserman buying below $2.92; keep me in touch with the situation.

I congratulate you on getting Phillin Brothers at Clinton, Mass., as I am sure this will be a good account for us.

Yours very truly, Charles H. Cox, General Sales Manager.

CK.

[fol. 2497] DEF'TS' EX. No. D-448

Mr. Horner

January 6, 1920.

Mr. F. M. Hoover, Philadelphia, Pa.

Referring to correspondence we have had with you in regard to Warren Brothers Company's work in Pennsylvania, wish to advise that we had a long session with them yesterday. They finally decided they would rather pay the full consumers' price and deal with us direct than through any country dealer at a cut price. They offered us 40,000 bbls. to be shipped to Delmont in Westmoreland County, 26,000 bbls. for Clearfield County and 18,000 for Elk County.

As we would have to absorb about 28¢ a barrel to meet competition at Delmont we passed this up, and understand they will probably place it with the Alpha Company.

The other two jobs we accepted, and will handle direct with them, although when they get around to ordering out shipments, if they want to place them direct with the mill or with your office of course we will so arrange.

As we understand it you are not fussy what you do with the Hyde-Murphy Company at Ridgway, and as they have not landed the business suppose you will have no trouble with them.

[fol. 2497½] Before accepting this business I telephoned to the "Boss," and he has O. K. the above, and hope it fits in with your views all right.

As I wrote you a while ago I except to be in your vicinity, and will probably drop in on you either next Saturday or Monday.

In regard to work that the Warren Brothers have around Swathmore, which we have had up with you, wish to advise that they closed this with some local dealer in your section, who offered them 14¢ per barrel as a cash discount. In other words all the dealer gets is 1¢ per barrel, unless he is getting something from the mill.

Very truly yours, John W. Ramsay.

[fol. 2498] DEF'TS' EX. No. D-449

Knickerbocker Portland Cement Company

Boston, Mass., July 30, 1919.

Mr. W. M. Floring, Sales Manager Knickerbocker Portland Cement Company, Inc., 30 East 42nd Street, N. Y., N. Y.

DEAR SIR: For your information would advise that the Portland Stone Ware Company told Mr. Daniels and myself this morning that when the Atlas Portland Cement Company went to Portland to close the order on the American Company job, they told Mr. Hersey of Winslow & Company, Inc., that the Turner Construction Company had 5¢ per barrel lower price which they would have to meet. They asked Winslow & Company to make a 5¢ per barrel cut which they in turn refused to do. The Atlas Company however, went to Chase & Company, another dealer in Portland, and got them to take the business on this basis.

[fol. 2498½] I cannot understand why the Atlas Company went to Winslow & Company to see if they would take the business, as Chase & Company have always been Atlas dealers. The only reason for this must be that Chase & Company do not push Atlas.

Very truly yours, Knickerbocker Portland Cement Company, Inc. J. W. Stinson, Local Manager.

[fol. 2499] DEF'TS' EX. No. D-450

May 9th, 1919.

Mr. Preston E. Bradlee, 3 Strathmore Road, Brookline, Mass.

DEAR BRADLEE: The State Board of Public Roads, Providence, R. I., will receive bids on May 16th for road work on Waterman Avenue, E. Providence, R. I., 18,000 square yards, also Mendon Road Town of Lincoln, Providence County, R. I., 7,000 square yards.

I note that the Aberthaw Construction Company bought cement from the Portland Stoneware Company at a cheaper price than he could buy Phœnix. Do you know what cement Cleveland is buying below the market? Please try to get as definite information about this as you can.

I also note that Waldo Brothers *is* selling Bath Cement, and that they quoted a lower price than the Mass. Lime & Cement Company was able to quote. Do you think they are buying Bath below the market?

Yours very truly, Charles H. Cox.

[fol. 2499½] DEF'TS' EX. No. D-451

Sales Department, Official Communication

NOTE.—Answers to these questions must be mailed to me Saturday of each week. This is to keep in close touch with conditions in the field.

B. L. Swett, Eastern Sales Manager.

Week ending Saturday 8-24-18. 191-. Salesman: F. L. Leach. Office: Boston.

1. What information regarding competitors or quotations did you get during the week?

Mr. Kellog, our New Haven dealer states he understands that the Knickerbocker Company are making a cent better price than we are on the New Haven price delivered.

2. What special inducement of any nature are competitors offering in your territory?

——.

3. State what disadvantages, if any, caused by the actions of this company you are laboring under in meeting competition.

——.

[fol. 2500] 4. Give names of competitors' salesmen that you have met during the week and information dropped by them.

——.

5. Give the complete History of any complaints that you may have on competitors' brands of cement.

——.

6. Are your customers satisfied with our deliveries, packages, handling of complaints sent to us, tracing of cars when requested by them, etc.? If not satisfied give names of dissatisfied customers and state reason of dissatisfaction.

Yes.

7. What suggestions have you for improving our methods of handling business in your territory?

——.

8. Do you know of any contemplated work in your territory that is not followed up by inquiry?

——.

9. What is your opinion as to the outlook for business in your territory during the next thirty days?

Fairly good under the present conditions. Most of the dealers seem to be pretty well stocked at the present.

10. What seems to be the opinion of the trade on our advertising? How can we improve it?
Very good.

Remarks.

Yours very truly, F. L. Leach, Salesman.

[fol. 2500½] DEF'TS' EX. No. D-452

Mar. 22, 1918.

Saratoga Coal Co., Saratoga Springs, N. Y.

Attention E. E. Hayden, Secretary

GENTLEMEN: We acknowledge receipt of your esteemed order of the 21st for one smal carload of Iron Clad Portland Cement in cotton, to be shipped the Saratoga Milling & Grain Co., at once.

Kindly accept our thanks for this order.

Fortunately we had placed in our yard this morning a 50,000# capacity car, which is probably the first car of this size we have had in several weeks. We are, therefore, loading this car to capacity and trust the arrangement will meet with your approval.

We would also call your attention to the fact that yesterday, March 21st, the price of cement advanced 40¢ per barrel. However, as your order was mailed before receiving our new quotation at the advanced price, we are under these circumstances billing same to you at the lower figure.

Yours truly, Glens Falls Portland Cement Co., —— ——,
2nd Vice President. GFB,JR-CMH.

[fol. 2507½] DEF'TS' EX. NO. D-461

Lehigh Portland Cement Co.

Allentown, Pa.

October 5th, 1918.

To Lehigh Customers:

Attached is a copy of a statement issued by the War Industries Board which appeared in the official United States Bulletin of September 27th, 1918, and outlines the present conditions under which deliveries of cement and other building materials may be made.

The following information may help to make the situation clear:

Work for which cement may be delivered without any sort of special permit.

Repairs or extensions to existing building involving a cost not exceeding $2,500.00.

New construction for farm purposes, involving a cost not exceeding $1,000.00.

Roadways, buildings, and other structures for railroads under the control or operation of the United States Railroad Administration.

Those directly connected with mines producing coal, metals and ferro-alloy minerals.

Buildings or constructions started and partly completed.

[fol. 2508] Streets, pavements and roadways now substantially under way may receive deliveries of materials up to November 1st, 1918.

* * * * * * *

All construction work other than the above can be done only under special Government approval, the classes of work and approval necessary being as follows:

First. Direct Government work for the various Government Departments shown in the attached statement requires approval of the War Industries Board at Washington. Application for such approval should be made through the nearest Regional Representative of the Resources and Conversion Section of the War Industries Board. If the work is approved, a license is issued and shipments of materials can be made only upon receipt of the license number, which must also be shown on the monthly reports of deliveries.

Second. All road work (including highways, street, culvert and bridge construction) requires approval of the United States High-

ways Council, application for such approval to be first made to the State Highway Department and through them to the Highways Council. The number of the Highways Council permit must be given for each shipment of material and must also be shown on the monthly delivery report of the manufacturer and dealer.

Third. All Non-War construction requires approval of the Non-[fol. 2508½] War Construction Division of the War Industries Board, application to be made through the local representative of the Council of National Defense. If the work is approved a license is issued. The license number is required on each shipment of material and must also be shown on the monthly delivery reports of manufacturers and dealers.

The present arrangement requires approval on practically all new construction work, even on construction which comes under an essential classification. The Government is establishing local representation of the proper authorities throughout the country so that when any operation is shown to be essential the issuing of approval will be promptly acted upon.

We hope that you will call upon us for any information or cooperation we may be able to give you in connection with any construction work in your territory.

Yours truly, Lehigh Portland Cement Company.

[fol. 2509] From Official U. S. Bulletin Dated September 27, 1918

"B. M. Baruch, chairman of the War Industries Board, authorizes the following:

A new regulation controlling non-war construction for the period of the war adopted by the War Industries Board authorizes new construction for farm purposes without permit where the aggregate cost involved does not exceed $1,000.

Exceptions to General Rule

The exceptions from the general regulation laid down by the priorities division of the War Industries Board that all non-war construction shall be done on special permit include:

Structures, roads, and other construction projects falling within the following classification: Undertakings, cleared and approved by the War Industries Board, directly by or under contract with the War Department or the Navy Department, Shipping Board, Emergency Fleet Corporation, the Bureau of Industrial Housing and Transportation of the Department of Labor, or the United States Housing Corporation.

Repairs or Extensions

Repairs of or extensions to existing buildings involving in the aggregate a cost not exceeding $2,500 and new construction for farm purposes involving in the aggregate a cost not exceeding $1,000.

[fol. 2509½] Roadways, buildings, and other structures undertaken by or under contract with the Railroad Administration or a railroad operated by such administration.

Those directly connected with mines producing coal, metals and ferroalloy minerals.

Public highway improvements and street pavements when expressly approved in writing by the United States Highway Council.

No building projects not falling within one of the foregoing classes shall be undertaken without a permit in writing issued by or under authority of the Chief of the Non-War Construction Section of the Priorities Division of the War Industries Board. A local representative of the Council of National Defense will report to the War Industries Board on each proposed project requiring permits.

While it is not the policy of the Government, says the War Industries Board, to interfere unnecessarily with any legitimate business, industry, or construction project it must be borne in mind that there is an imperative and constantly increasing demand for labor, material, and capital for the production and distribution of direct and indirect war needs, to satisfy which much non-war construction must be deferred. Manufacturers and dealers may continue to supply materials for buildings or constructioin started and partly completed."

[fol. 2510] DEF'TS' EX. No. D-462

Nazareth Cement Company

Inter-Departmental Correspondence, Boston Office

Date: October 15th, 1918.
Subject: ——.

To Mr. J. A. Horner, Nazareth, Pa.:

For your information, about a week ago Stone & Webster of this City were awarded a foundation contract for Lever Brothers of Cambridge, Mass., and the Purchasing Agent told me that he had bought a brand of Cement from a dealer at much below the market price and explained that the dealer told him that the reason why he was able to do this was that he had a contract that would not require all the Cement, and Stone & Webster gave him the business.

As near as I can find out, the Winslow Company of Portland, Maine, who own the Portland Stone Ware Company of this City have a blanket contract with the Hercules people and this is where the Cement came from. As you probably know, the Palmer Lime & Cement Company of New York are distributors for the Hercules brand of Cement in New England.

All of the above for your information.

Very truly yours, John W. Ramsay. JWR-D.

[fol. 2510½] DEF'TS' EX. NO. D-463

Nazareth Cement Company

Inter-Departmental Correspondence, Nazareth Sales Office

Date: Mar. 27th, 1919.
Subject: Field, Barker & Underwood.

To F. M. Hoover, Sales Mgr., Philadelphia Office:

Mr. Horner does not want to see them start using other than "Nazareth" cement and if someone really quoted them a better price for the Hilton Village work we must take care of them in some way so as not to lose their business.

Yours truly, —— ——.

Telegram

Nazareth Cement Company

Nazareth, Pa., April 10, 1919.

John W. Ramsay, 161 Devonshire St., Boston, Mass.:

You can protect customers on decline in price on both new and old contracts for shipments 1919 only.

J. A. Horner.

[fol. 2511½] DEF'TS' EX. NO. D-465

Pennsylvania Cement Company

Philadelphia, Pa., 1/8/1919.

Mr. H. A. Moore, Pennsylvania Cement Company, Philadelphia, Penna.

DEAR SIR: I have your letter of the 6th instant, and note contents.

You recall that some time since, we went over the different contracts, of where they were not drawing cement, and I gave you the situation at that time, that the reason the jobs were not going ahead was the fault of high cost of labor, and shortage of being able to secure same. In these cases, I asked you to take up with New York regarding J. E. Rhoads, Geo. Krause Hardware Co., Casper Oermann, Litzenberger Hardware Co. and D. K. Lockhard, and it may be necessary to have these contracts carried over until next year (1919), as all of the above men had explained to me that if the work did not [fol. 2512] go ahead in 1918, or that the Government would not let them proceed, it would surely go ahead in 1919.

You know we have a couple coverings up at Milton. These jobs will go ahead. I have not found any of the Cement Companies that have cancelled up on any jobs that were held up last year.

I know absolutely that Vulcanite and Atlas have not. I learned something today, and that is, that one Company went so far last year, when they covered on jobs both here in town and in Lebanon, as to guarantee the dealer against freight advances, and these people are, and have been getting cement right along at the old price, and also at the old freight rate.

We do not want to cancel any of these contracts outside of Lancaster.

Yours truly, MacAllister.

[fol. 2512½] DEF'TS' EX. No. D-466

The Allentown Portland Cement Co.

Boston, Mass.

June 7, 1919.

R. L. Cope, Mgr. of Sales, Allentown Portland Cement Co., Allentown, Pa.

DEAR SIR: Replying to yours of the 5th, in regard to Marshall Spring. We hope that you will find some way out of this that will leave Spring happy, as he certainly is being catered to by inches by the Atlas and Knickerbocker Companys. In fact, he told the writer that the treatment he was getting from Allentown could not compare at all favorably with the fine treatment he had received from other companys, so I believe it is just a question of making up your mind how far you want to go and whether he is right or wrong, in order to get some of his business.

I do feel, and in fact he told me, that he will give you some business; what percentage of this business he will give me he did not say, but think I can get my share.

T. Stewart & Sons Company were low bidders Wednesday on a bridge job that requires between fifty and sixty thousand barrels of cement. You can imagine how many cement people are in town at this time regarding this job. Think we have better than an equal chance.

Yours very truly, Allentown Portland Cement Co. W. J. Grosvenor.

[fol. 2513] DEF'TS' EX. NO. D-467

Lehigh Portland Cement Co.

Reference: Thos. P. Brennan's Sons, Jersey City.

New York, August 1st, 1919.

Lehigh Portland Cement Co., Allentown, Pa.

GENTLEMEN: I have personally investigated this matter and also have Mr. Burke and Mr. Stickle's reports. They are not dealers and do not carry any stock of building materials. They are general contractors and truckmen. I also discussed this matter with J. P. Hall and Washburn Bros., of Jersey City who claim the Pennsylvania people have simply made them a dealer to sell this particular contract.

Yours very truly, F. W. Douglas, Manager New Jersey District.

[fol. 2513½] DEF'TS' EX. NO. D-468

August 7, 1919.

Mr. Preston E. Bradlee, Brookline, Mass.

DEAR BRADLEE: I have no doubt but that Mr. Parker has received some low prices on cement for his various road jobs. The dealers are cutting the differential invariably. The only thing we could do would be to get Mr. Parker to ask for Phœnix from the dealer he expects to supply him. I realize that this is difficult to do, but just at this time we do not care to pursue any other course. The situation with the road contracts is very unsatisfactory. I do not believe that 5% of the work has gone at the full contractor's price. The cement companies themselves, or at least some of them, either encourage the dealer to cut his differential or actually engineer the operation themselves.

I am sorry that we are up against this condition. The only thing that you can do is to play with the dealer. Perhaps, at some later time we will take other action, but just now, we cannot.

Yours very truly, Charles H. Cox.

[fol. 2514] DEF'TS' EX. NO. D-469

New York City, Sept. 16, 1919.

Mr. Abbott, Mr. Feeks, Mr. Lovejoy, Mr. O'Brien, Mr. Steer, Mr. Stinson, Mr. Swallow, Mr. Tomes:

We wish to call your attention to the fact that we are in a position to make immediate shipment on receipt of order.

We have made loading arrangements at our plant so that we can

load from nine to ten thousand barrels per day; and at present we are not experiencing any difficulty in securing the necessary empty cars in which to load this amount.

We wish you would make it a point to impress upon all dealers and others upon whom you call, that we can make immediate shipment. We know that the Lehigh Valley district has been suffering for some time from a lack of empties, and we believe it would be a good opportunity for us to step in and secure some orders on the guarantee of prompt shipment.

Very truly yours, —— ——, Sales Department. WMF:CMB.

Lehigh Portland Cement Co.

Sales Department, Official Communication

NOTE.—Answers to these questions must be mailed to me Saturday of each week. This is to keep in close touch with conditions in the field.

B. L. Swett, Eastern Sales Manager.

Week ending Saturday, June 28, 1919. Salesman: J. E. Fraser. Office: Allentown, Pa.

1. What information regarding competitors or quotations did you get during the week?

The Jiant man offered to sell the Berkeley Lumber Co., Martinsburg, ten cents under present prices.

2. What special inducement of any nature are competitors offering in your territory?

None other than the above.

3. State what disadvantages, if any, caused by the actions of this company you are laboring under in meeting competition.

None.

4. Give names of competitors' salesmen that you have met during the week and information dropped by them.

None.

5. Give the complete History of any complaints that you may have on competitors' brands of cement.

None.

6. Are your customers satisfied with our deliveries, packages, handling of complaints sent to us, tracing of cars when requested by them, etc.? If not satisfied give names of dissatisfied customers and state reason of dissatisfaction.

[fol. 2515] Our deliveries have been punk for some time.

7. What suggestions have you for improving our methods of handling business in your territory?

Ship cement from Newcasel to all points along the Ohio River. And the upper territory on the B. & O. R. R.

8. Do you know of any contemplated work in your territory that is not followed up by inquiry?

None.

9. What is your opinion as to the outlook for business in your territory during the next thirty days?

Good.

10. What seems to be the opinion of the trade on our advertising? How can we improve it?

The dealers think our adv. is great.

Remarks.

Yours very truly, J. Fraser, Salesman.

To our customers:

Herewith you will find Circular No. 8 of the War Industries Board, Priorities Division, to which your attention is directed. We also enclose Circular No. 4 of the War Industries Board, Priorities Division, showing rules and regulations governing Priority in Production. These Circulars are self-explanatory, and in accordance with Circular No. 8, we have signed the pledge referred to, and enclose a copy of the pledge required from the dealer who sells our product.

Will you please sign the pledge of co-operation as required and file it with us in order that we may ship promptly, and without question, orders you may place with us for cement for re-sale purposes? In due season form for report called for in pledge will be sent you. Please keep a record of your sales from September 1st, so that we may be able to fill out blanks when received.

We know you will accept the small inconvenience entailed by these regulations in a spirit of loyal co-operation with our Government in the prosecution of the war.

Lehigh Portland Cement Company.

[fol. 2516½] DEF'TS' EX. NO. D-472

Lehigh Portland Cement Co.

Allentown, Pa.

November 25th, 1918.

To Lehigh Customers:

All construction restrictions removed

The following is taken from an announcement of the War Industries Board:

"All remaining restrictions on non-war construction throughout the United States are officially removed.

Formal notice to this effect has been telegraphed to the Chairmen of all the State Councils of Defense.

The action taken permits all building operations of whatever character, held up in the interest of the war program to proceed. No further permits will be required from the War Industries Board or the State Councils, through whom control over the situation in each State was maintained."

This ruling removes all restrictions from construction work of every kind or size. Dealer pledges formerly required under the restriction orders are automatically cancelled. Reports of the purposes for which materials have been furnished may be discontinued. [fol. 2517] The prompt action of the War Industries Board emphasizes the National importance of the construction industry and the leading part which it must take in the work of reconstruction now beginning.

Construction work postponed during the past two years can and should now go ahead, providing employment for a large percentage of our men as they return from France or are released from war industries, and at the same time providing the manufacturing and housing facilities so urgently needed for the years of industrial expansion before us.

In such efforts the building industry has an opportunity for National service of the utmost importance.

Lehigh Portland Cement Company.

March 4th, 1919.

Building Prospects

Building conditions have shown great improvement during the past few weeks. There are many reasons why there should be heavy

building activity and demand for building materials in the very near future.

In the first place, there is a shortage of dwellings, stores and other buildings in the country, due to the fact that the building programme fell far behind during the last three years. Such buildings can no longer be postponed.

Labor will be plentiful. The country owes it to each one of its returning soldiers to provide him with employment, which is another reason why necessary buildings will go ahead.

War conditions show the necessity for good roads as it was never shown before. Not only will the extensive state road programmes go through, but the need for better maintenance of present roads is recognized, which means that there will be an increased demand for road materials.

Considerable cement has been moving out of dealers' warehouses during the mild weather of the past several months, with the result [fol. 2518] that stocks are lower than ever before. It seems probable that the mild weather will continue, and we believe it will be to your advantage to provide now for the early spring trade.

The same reliable Lehigh service that stood the test of two years of war is at your command today. May we book your order?

Lehigh Portland Cement Company. B. L. Swett, Eastern Sales Manager.

May 31st, 1918.

Return Empty Lehigh Cement Bags Now

The cloth cement sack situation is serious, and we are taking this means of telling our customers frankly of the existing conditions.

The demand for cotton for urgently needed war supplies makes it almost impossible to purchase new cotton sacks. This demand is so urgent that it is a patriotic duty to conserve cotton to the utmost.

By using to the fullest efficiency all sacks now in the hands of the trade, consumers and dealers in building materials can be of very real assistance to the Government in the present crisis.

Only by the united effort of every user of cement can an acute sack shortage be avoided. Delay in returning empty sacks or improper disposal of them to others than our dealers or ourselves will cause serious interference with future shipments.

Railroad embargoes prevent the return of sacks from many points. It is hoped to overcome this by having one day each week fixed as a day on which the railroads will accept sack shipments; meanwhile if an embargo exists at your station, please write us particulars as to [fol. 2519½] the number of bundles you have ready and the railroad conditions existing, and we will try to assist in having the sacks moved.

With this letter is enclosed a return post card, and we will appreciate it if you will be good enough to mail this card to us promptly, stating the approximate number of empty sacks you have on hand. We are anxious for this information to assist in planning ahead so as to continue making prompt Lehigh cement shipments, and will be grateful for your co-operation in supplying the figures requested.

We are anxious to handle the sack situation so as to cause our customers a minimum of inconvenience, and feel that we can rely upon receiving the close co-operation which will enable us to meet and successfully overcome the present serious conditions.

Yours truly, Lehigh Portland Cement Company.

Lehigh Portland Cement Co.

Allentown, Pa.

November 16th, 1918.

Lehigh Dealers:

The War Industries Board has taken the first steps toward modifying the War-Time restrictions on deliveries of building materials.

These steps are shown in the attached extract from Priorities Division Circular No. 57, issued November 11, 1918. We call your attention to the following important modifications:

Highways, road and street work may now go ahead with no restrictions, provided funds are available.

Buildings connected with the production of food, as noted in Clause 8 of the Circular, are now under no restrictions whatever, regardless of the total cost involved.

There are no restrictions on Farm construction, regardless of the cost involved.

New buildings of any character, involving cost not exceeding $10,000, require no permit whatever.

New buildings of any character, involving total cost of over $10,000

and less than $25,000 now require written authority from only the State Council of Defense or its duly authorized representative, instead [fol. 2520½] of a special permit from Washington as heretofore.

These important changes allow greatly widened opportunities for building material sales and it seems certain that within the near future the building material industry will be again on an entirely normal basis. We hope that you are already experiencing the benefits of the new rulings.

The building material dealers of the United States, who have so loyally co-operated with the Government during the War emergency, may well feel that theirs has been a substantial aid in winning the war. It is now their opportunity to play an equally important part in the great era of reconstruction upon which the world is entering.

Yours truly, Lehigh Portland Cement Company.

Extract from Circular Dated November 11, 1918

War Industries Board, Priorities Division

Circular No. 57

All of the rules, regulations, restrictions and directions embodied in orders and circulars issued by the Priorities Division of the War Industries Board are continued in effect subject to the following modifications:

Section First. Section 5 of Revised Circular No. 21, issued by this [fol. 2521] Division as of date October 15, 1918, dealing with nonwar construction, is hereby amended so as hereafter to read as follows:

"Sec. 5. Construction projects not requiring permits or licenses from Non-War Construction Section.—Construction projects falling within the following classifications are hereby approved, and no permits or licenses will be required therefor from the Non-War Construction Section:

"(1) Construction projects approved in writing by the Facilities Division of the War Industries Board.

"(2) All farm and ranch buildings, structures, or improvements.

"(3) All buildings, structures, roadways, plant facilities, or other construction projects of every nature whatsoever, undertaken by the United States Railroad Administration, or by any rail or water transportation company, organization, or utility (whether or not under the direction of such administration) or by the American Railway Express Company, or by the owner or operator of any telegraph or telephone line.

"(4) The construction, maintenance, improvement, or development, by Federal, State, or municipal authorities of highways, roads, boulevards, bridges, streets, parks, and playgrounds.

"(5) The construction, extension, improvement, maintenance, or repair of any public utility, including water-supply systems, sewer systems, light and power facilities, and street and interurban railways.

"(6) The construction, extension, or repairs of all irrigation and drainage projects.

"(7) Construction projects connected with the extension, expansion, or development of mines of every character whatsoever or [fol. 2521½] connected with the production and refining of mineral oils and of natural gas.

"(8) The construction, alterations, or extensions of, or repairs or additions to, plants engaged principally in producing, milling, refining, preserving, refrigerating, or storing foods and feeds.

"(9) The construction of new, or the alterations or extensions of existing, school-houses, churches, hospitals, and Federal, State, or municipal buildings, involving in the aggregate a cost not exceeding twenty-five thousand dollars ($25,000).

"(10) The construction of new buildings or structures not embraced in any of the foregoing classifications, or the repairs or additions to, or alterations or extensions of existing buildings and structures, in either case involving in the aggregate a cost not exceeding ten thousand dollars ($10,000).

"(11) The construction of new buildings or structures not embraced in any of the foregoing classifications, or the repairs or additions to, or alterations or extensions of, existing buildings or structures, in either case involving in the aggregate a cost not exceeding twenty-five thousand dollars ($25,000), when approved in writing by the State Council of Defense or its duly authorized representative.

"(12) Buildings begun prior to September 3, 1918, where a substantial portion of the building has already been constructed."

Lehigh Portland Cement Co.

Allentown, Pa.

August 5th, 1919.

Have you ever checked over your list of customers and noticed how many you have sold purely on Service?

Most cement users have limited storage and depend on the dealer to keep them supplied. When a last minute, rush order has exhausted your stock, you in turn, must depend on the manufacturer for service and he should be able to give it, not only in special cases, but always.

A glance at the attached sketch shows you why Lehigh Service has proven itself one of the dealers' most valuable assets. Lehigh service means that your orders will be shipped from the mill nearest you and that your car will be loaded within 24 hours after we have the order. Not only this, but our Traffic Department will tell you just about when the car should reach you and see that it does reach you.

Prompt service is one of the Lehigh features but there are others equally valuable. Return the card and we will gladly give you details.

Yours truly, Lehigh Portland Cement Company. ——— ———, Eastern Sales Manager. BLS/C.

Prosperity and the Building Material Dealer

The Peace Treaty is signed and all indications point an era of prosperity right ahead of us.

Tremendous strides have been made during the past six months in bringing conditions back to normal, and the country is ready to go ahead.

The new activity is especially strong in the building field, which labored during the war under the most severe handicaps and restrictions. The time is now at hand when the building material dealer will reap the reward of his patient and self-sacrificing war effort.

In the Saturday Evening Post and other national magazines, there is now appearing the greatest Portland Cement advertising campaign ever undertaken. It pays due tribute of recognition to the work and service of the building material dealer. It is bringing Lehigh, the National Cement, before millions of readers and creating new business for the thousands of dealers through whom Lehigh is distributed to the Nation.

Do you want to share in the results of this campaign? Let us tell you why Lehigh is the cement which means increased business and profts for you.

Yours very truly, B. L. Swett, Eastern Sales Manager. BLS/B.

Knickerbocker Portland Cement Company

New York City

Subject: Sacks.

January 8, 1920.

Mr. A. D. Naylor, Treasurer Knickerbocker Portland Cement Co., Inc., New York City, N. Y.

DEAR SIR: Acknowledging your letter of the 7th inst., regarding sack rejections, this certainly looks like liberality on the part of our Company.

In this connection I might advise that yesterday we closed a 15,000 barrel order to be used by the Evatt Construction Company at the Plant of the National Calf Skin Company, Peabody, Mass. (This is another Swift Company's interest.) The order is coming through the C. H. Spring Company. When we were given this order Mr. Evatt spoke about the treatment he had received from the Nazareth Cement Company to the effect that they had never made any bag rejection. I merely mention this matter to confirm your stand that the trade generally gives a great deal of consideration to these minor sack rejections, and although we may not have complaints nevertheless it helps to hold a good customer.

Very truly yours, Knickerbocker Portland Cement Co., Inc.,
J. W. Stinson, Local Manager.

[fol. 2526] DEF'TS' EX. No. D-481

January 10, 1920.

Mr. Floring, Mt. Stinson:

GENTLEMEN: In the statement of contracts secured for the year 1919, by the eastern cement manufacturers, the Knickerbocker Company is the lowest on the list with only 97 contracts, calling for 395,000 barrels. The figures of the other reporting companies are as follows:

Company	New contracts	
	No. to date	Bbls. to date
Allentown	245	673,643
Alpha	900	2,309,140
Atlas	1,509	4,337,269
Bath	194	701,947
Coplay	345	823,589
Dexter	189	432,878
Edison	461	1,636,952
Giant	196	969,816
Hercules	260	592,516
Knickerbocker	97	395,562
Lawrence	405	1,291,211
Lehigh	1,161	2,703,600
Nazareth	307	951,401
Penn Allen	171	487,349
Pennsylvania	290	1,168,547
Phœnix	133	479,700
Vulcanite	373	1,008,416
Total	7,236	20,963,736

[fol. 2526½] This certainly is not a very good showing for this company and our record for this year must show a decided improve-

ment. I trust that each salesman will do his part to insure reaching the goal desired for this year. Please instruct the Salesmen to treat the above information as strictly confidential.

Yours truly, —— ——, Treasurer. ADN:GH.

Pennsylvania Cement Co.

Inter-Office Letter from Mr. G. M. Clukas, Boston Office

November 4, 1920.

To Mr. E. P. Alker:

In talking over present prices with some of the dealers in Boston and this vicinity I find that a number of the companies are basing their price on the customary differential on Hudson River cements.

With the increase of 40% over the old rate at some delivery points in this territory our price is from 2c. to 10. per bbl. higher by following your instructions of Oct. 15th to base price on $2.50 mill base plus the Lehigh Valley rate, as for instance, our price in Boston is $4.32 per bbl. and the other companies are quoting $4.27 per bbl.

While my instructions are not to take any new business without authority from the New York office I felt that I ought to call this to your attention.

Very truly yours, Geo. M. Clukas.

[fol. 2527½] DEF'TS' EX. NO. D-483

Nov. 4, 1920.

Mr. E. P. Alker, Mr. S. G. Taylor:

In regard to quoting on Hudson Base it has been called to our attention that the Atlas, Lehigh, and Alpha companies are quoting in Syracuse at $4.13 per bbl. instead of $4.17. As we do not wish to lose any of our customers we will meet this price, using the Hudson Base in figuring same.

Yours very truly, —— ——, Sales Manager. EPA MC.

[fol. 2528½] DEF'TS' EX. NO. D-485

Syracuse, N. Y., October 24, 1920.

Mr. A. D. Naylor, President Knickerbocker Portland Cement Co., Inc.

DEAR SIR: For your information kindly be advised that the following Cement Companies have their salesmen out securing business for next year and in some cases are taking orders for immediate shipment, the Universal Company I understand are selling the Syracuse Wall Plaster Co. for immediate shipment at the price of $3.67 per bbl. F. O. B. Syracuse, while our price figures *oor* is $4.15 per bbl. F. O. B. Syracuse. The Atlas, Phœnix, Lehigh, Pennsylvania I understand are taking business for next year.

In connection with the above, wish to advise that the State Highway will have a letting on Friday, October 20, and I am advised that the estimated prices on cement *are* given the contractors are based on the present price and will be for Spring delivery. This would be very good business as all indications point to a reduction in the price of cement next year.

Yours very truly, B. F. Abbott.

[fol. 2529] DEF'TS' EX. NO. D-486

October 23, 1920.

Mr. Preston E. Bradlee, 3 Strathmore Road, Brookline, Mass.

DEAR BRADLEE: It seems that some of the cement companies are going to put in their contracts a clause protecting against decline,

and I have no doubt that we will be obliged to follow suit, so do not lose any contracts because of this.

Keep after the Biltmore Hotel proposition in Providence.

Yours very truly, —— ——, General Sales Manager.
CHC-M.

[fol. 2529½] DEF'TS' EX. NO. D-487

September 20, 1920.

Mr. Preston E. Bradlee, Brookline, Mass.

DEAR BRADLEE: We have a contract with George L. Gage Company, dated August 8th and expiring June 1st of this year, extended to September 15th, 1920, covering 2,000 barrels of cement for the construction of walls and other improvements along canal, Essex County, owner and contractor. We have shipped two cars on this contract and have on hand shipping instructions for a number of others. I have an idea that this work has not been going ahead and that all the cement which Gage has ordered against this contract is not intended for use in that work. I may be wrong, but I am suspicious. Will you please go to Lawrence and investigate this matter carefully?

The transportation conditions are much better, and we are able to get practically all the cars we want. On this basis we will be able to give our customers some sort of service, and as I wrote before you may accept orders with the understanding that shipment will be made within a week or ten days, if possible. Don't place yourself in the position though of soliciting business, because we are not yet far enough caught up to do that, but it does seem likely that if we have current orders on hand, most of these will be shipped.

[fol. 2530] Edison and Bath are both charging $4.50 at the mill. Will you please make a careful canvas of the situation, advising me how the customers take this, and also advising whether they are selling much cement on that basis.

I am enclosing an expense check for $75.00, which you will now need.

Best regards for yourself.

Yours very truly, Charles H. Cox.

No.

9. What is your opinion as to the outlook for business in your territory during the next thirty days?
Good.

10. What seems to be the opinion of the trade on our advertising? How can we improve it?
Remarks: ——.

Yours very truly, C. S. Wheat, Salesman.

[fol. 2534½] DEF'TS' EX. No. D-491

August 27, 1920.

Mr. H. C. Merritt, Tuckahoe, N. Y.

DEAR SIR: We are in receipt of your letter of August 26, and note that Wilkins & Adams Co. advised you that they are receiving 10c per bbl. discount from some company. This is very true, but the price which they are paying for cement is 25c per bbl. higher than our price, in other words, the other company are quoting on a basis of $2.50 mill base allowing 10c per bbl. discount, whereas we did not raise our price, and are still quoting on the $2.25 mill base. Also note what you say in regarding shipments, due, and will endeavor to get you something out *therehem* next week.

Yours very truly, Pennsylvania Cement Company.—— ——,
Treasurer. EPA/RJ.

June 3rd, 1920.

You Can Help

With every desire to serve our dealers, it is but fair to give you absolute facts and to suggest how you can help us to help you.

Our supply of coal is uncertain—its costs has been increasing daily. Just when this condition will be corrected, we don't know.

Labor is costly. You know that it is most inefficient.

It is practically impossible to buy new bags at any price. And, most of you know the difficulty to secure box cars.

This combination of unsettled conditions makes it practically impossible to definitely state when shipments can be made and our costs at the time shipment is made. Therefore, in fairness to you we

can accept orders only from our regular dealers for one carload only of Security at a time, at the price prevailing at time of shipment, [fol. 2535½] which shipment will be made at the earliest possible date, consistent with fair play to all Security dealers.

Please do not order a barrel more of Security than you actually need for your regular trade—Be sure to return every empty bag just as soon as it is empty and please try to tell us as far ahead as possible your minimum requirements.

With this cooperation from you, we will do our best to serve you during this trying period.

Security Cement & Lime Co.

[fol. 2536] DEF'TS' EX. NO. D-493

Carolina Building Supply Company

Wilson, N. C.

Personal.

September 10, 1920.

Mr. S. N. Peters, General Sales Manager Giant Portland Cement Co., Philadelphia, Pa.

DEAR SIR: When your Mr. Barnes was in to see us a few days ago, at the time of letting of contract for paving for the city of Wilson, the writer called his attention to the fact that Lehigh Portland Cement Co., and other cement manufacturers, were allowing their dealers .10c per barrel off for cash within ten days from date of [fol. 2536½] invoice instead of the old .5c per barrel discount, and asked him why it was that the Giant Co., was not doing the same thing and he suggested that we write and call this matter to your attention. Hence this letter to you on this subject. It does seem to us that when other companies are allowing this discount (.10c per barrel) that the Giant Company would do likewise.

We would like for you to take this matter under consideration, and advise if you will not in the future allow us a discount of .10c per barrel off for cash within ten days from date of invoice. If you people knew how tight money matters are down this way now you would not hesitate to grant this request, and further, if tobacco and cotton continues to go down, we want need much cement a little later on. The situation in Eastern North Carolina is anything but bright. Doubtless you are aware of the fact that the farmers are being offered less for their crops than it actually cost- them to market it.

With kind personal regards from the writer, we are,

Yours very truly, Carolina Building Supply Co., per F. B. Ward, Manager.

[fol. 2537] DEF'TS' EX. NO. D-494

Copy to Mr. A. J. Barnes.

Sept. 13th, 1920.

Carolina Building Supply Co., Wilson, North Carolina.

GENTLEMEN: I have Mr. Ward's letter September 10th in reference to cash discount of ten cents per barrel. It is true that some of the companies are allowing discount of 10c per bbl., but in view of the fact we are selling so little cement at the high price and all of our sales are at a loss due to the abnormal condition we have not seen our way clear to increase the cash discount from 5c to 10c per barrel. Of course later on we hope that conditions will be normal and we will then change the discount provided the other companies continue allowing 10c, as we would not expect our customers to pay us more for cement than they could get same elsewhere under normal conditions.

We have not had much objection in regards to the discount, but the few letters we have received we explained conditions as above and our customers seemed to take the stand that our position is reasonable, and are perfectly willing to continue on the old basis for the present.

I am very sorry to note the last paragraph of your letter as I am afraid conditions you mention will have a bad effect on business in [fol. 2537½] the future, but so far as this year is concerned we do not have to worry as unfortunately we have more cement under contract than we can possibly ship, and if the coal situation does not ease up next year the less cement we ship the better.

With kindest personal regards, I remain,

Yours very truly, —— ——, General Sales Manager.

SNP/F.

Date: December 3, 1920.

Subject: ——.

John W. Ramsay, Sales Mgr., Boston Office:

Have your letter of the 2d in reference to the new prices and note you have sent out new quotations equalizing the Hudson River freight rates. Yesterday we sent you a letter giving the different bases and wish to call your attention to the Universal base, which is $2.05 and 25c below our Lehigh Valley base. Don't forget to figure this when you are quoting prices for it is just possible that in some cases the Universal price will be lower than even the Hudson River. Use the lowest price, whether Universal or Hudson River, for we will have to do this in order to compete with other companies and get the business. Merely thought we would call your attention to this for heretofore the Universal did not figure in *in* your territory but now that the difference in base prices is so great it is just possible that in some cases the Universal price might be lower.

Yours truly, —— ——.

[fol. 2539] DEF'TS' EX. NO. D-497

November 18, 1920.

DEAR MR. FEEKS: I have your report of the 16th on your call to W. N. Potter & Sons of Greenfield, Mass.

You report a statement made by Mr. Potter that we can look for a good share of his business on an equal basis. Was there any explanation made to you of what this equal basis meant? You, not being familiar with the Potter Company business, would naturally take the statement as given to you, but in previous years, we fully believe that this Company has had an inside price from one or more of our competitors. Taking this fact into consideration, the statement of an equal basis does not look a bit good to me and possibly Mr. Potter made the statement, bearing in mind the prices he had had from other Companies.

If he made any explanation of this statement, would appreciate your sending it to me.

Yours very truly, —— ——, Sales Department. WMF/C.

[fol. 2540] DEF'TS' EX. No. D-499

Alpha Portland Cement Co.

Weekly Letter

Philadelphia, Pa., June 19, 1920.

MR. DYER: A number of our dealers called at the office this week and pleaded with us to take their orders for cement as they are entirely out, while others called for information as to when shipment will be made of the orders that they have in.

Received several inquiries for cement this week, and several dealers whom we have not sold for some time called and wanted to place orders with us, and from the conversation we had with them, they have had orders in with *are* competitors for over a month and longer, and they have no idea when shipment will be made of same.

The Philadelphia dealers are up against it for cement. The Newton Supply Company, sent two trucks to the Works yesterday for cement, leaving Philadelphia four o'clock in the morning, and if you can do anything to ship a few cars in here to the dealers, it will certainly be appreciated.

We hope that you will be able to clean up some of our old orders during the next week.

Yours truly, Geo. P. James.

[fol. 2540½] DEF'TS' EX. No. D-500

Pennsylvania Cement Co.

Inter-Office Letter from Philadelphia Office

To Mr. E. P. Alker.
Subject: U. S. Engr.
Address: 813 Commercial Trust Bldg.
Date: January 27th, 1921.
Reference: Quotations issued.

Below are the prices quoted the U. S. Engineer, War Department, on 675 barrels cement for Delaware City, Del., bids for which were opened yesterday at 12 o'clock noon.

Alpha Cement Co., $3.89 dealer's price.

Giant Cement Co., $3.72 new dealer's price less 2¢ per bbl. war tax.

Lehigh Cement Co., $3.74 New dealer's base.

Defrain Sand Co., $4.12 Dealer's base plus 20¢ differential, & 3¢ bin test.

W. C. Clark & Son, $4.19 Dealer's base plus 30¢ differential.

Penna. Cement Co., $3.99 Dealer's base plus 10¢ differential.

[fol. 2541] David France Co., $4.09 Dealer's base plus 20¢ differential.

Dexter Cement Co., $3.89 Dealer's Base.
Atlas Cement Co., $3.89 Dealer's Base.
Chas. Warner Co., $3.99 Dealer's base plus 10¢ differential.

The Giant Cement Company's bid was based on the fact that the Government does not pay any war tax, and they consequently deducted 2¢ per barrel.

Yours very truly, H. A. Moore, District Sales Manager.

Security Cement & Lime Co.

Inter-Departmental Correspondence

Subject: ——.

2/3/21.

To Mr. H. S. Rayner.

DEAR HARRY: Thank you for the Atlas price at Westminster.

As written you last night—effective at once all our quotations are to be based on $1.80 bulk, Universal plus Universal freight rate—10¢ per bbl. discount for payment in 10 days—25¢ cloth bags and 25¢ over the bulk price for paper bags.

This means that our delivered cloth price and the delivered Universal cloth price are identical but we allow 10c discount for payment in 10 days while the Universal allow only 5¢ discount for payment in 10 days.

H. B. Warner.

Inter-Departmental Correspondence

Subject: ——.

2nd February, 1921.

To Mr. H. B. Warner, Sales Manager:

Replying to your request over telephone today, the best information I can get at this time is that Atlas are quoting $3.48 in Baltimore less 10¢. I have been unable to get in touch with Meredith-Healey Lumber Company, Annapolis, Md. Will visit them personally tomorrow morning and try to get a look at quotations they have both from Lehigh Valley and Universal.

I am enclosing a quotation sent to Smith & Reifsnider, Westminster, Md., by the Atlas Portland Cement Co. I note they are making a price at that place of $3.48, less 10¢.

We are holding the quotations of the 1st which were received this morning.

Rayner.

[fol. 2542½] DEF'TS' EX. No. D-503

The Lawrence Cement Company

Feb. 1, 1921.

To the Salesmen:

You will be interested in knowing that notwithstanding adverse conditions, we have been able to ship approximately 38,000 barrels of Dragon cement this month, January. This is an average of about 1,500 barrels for each working day of the month. We are very anxious for the month of February to ship at least 2,000 barrels daily, and would be very pleased to see the total shipments for the month of February exceeding 50,000 barrels. We are counting on you to use every effort to supply us with daily orders to meet this quota that we are aiming at.

Yours very truly, F. H., Sales Mgr. rap-mh.

Mr. Grover, Mr. Potter, Mr. Vollmer, Mr. Wyckoff, Mr. Maloney, Mr. Sminck, Mr. Larimer, Mr. Miller, Mr. Sperry, Mr. Danner, Mr. Airey.

[fol. 2543] DEF'TS' EX. No. D-504

Feb. 16, 1921.

To the Salesmen:

Our shipments for the first half of February total 21,235 barrels. This is slightly under our goal of 50,000 barrels for the month. We have no doubt, however, that with splendid weather conditions and low stocks in the hands of dealers, we will be able to make up the difference in the second half of the month.

Yours very truly, —— ——, Sales Mgr. rap-mh.

Sminck, Potter, Wyckoff, Grover, Philadelphia office, Siegfried office, Airey, Maloney.

[fol. 2543½] DEFT'S' EX. No. D-505

March 1, 1921.

To the Salesmen:

We are very gratified that the efforts of our salesmen have enabled us to make shipments during the month of February of 49,000 barrels. This is the largest February we have had since 1916, and we express our appreciation for the effort that has given us such a good volume of shipments to report to Mr. Smith upon his return.

Yours very truly, R. A. P. rap-mh.

Mr. W. L. Sperry, Mr. W. P. Airey, Mr. Danner, Mr. Vollmer, Mr. Grover, Mr. Maloney, Mr. Potter, Mr. Wyckoff, Mr. J. F. Miller, Mr. C. S. Sminck.

Nazareth Cement Company

Inter-Departmental Correspondence, Nazareth Sales Office

Date: March 8, 1921.
Subject: ——.

To John W. Ramsay, Sales Mgr., Boston Office:

In reference to the Waterbury, Conn. price of $3.76 and our price of $3.77, Mr. Horner does not want you to quote the $3.76 price but thinks we had better adhere to the $3.77 price as per book. However, if you find and have evidence to prove that one of the larger companies is quoting $3.76 you can meet that price rather than lose the business.

Yours truly, —— ——.

[fol. 2547] DEF'TS' EX. NO. D-510

Form No. 33

March 28, 1921.

Bert W. Kessel, Philadelphia Office; Messrs. Child, Crowley, Ives, Jochim and Morris:

Price

Effective today, the price of cloth bags has been reduced from 25¢ to 10¢ each, there being no change in the price of paper bags nor in the various mill bases.

Get in touch with every contractor who has a job, and, no doubt, you will be able to close up some business on this new basis.

Please acknowledge receipt of this change.

BWK-L.

[fol. 2547½] DEF'TS' EX. NO. D-511

March 26, 1921.

Mr. Preston E. Bradlee, Boston, Mass.

DEAR BRADLEE: I have read over your report outlining conditions with the Mass. Lime & Cement Co. Just at this time we do not believe that it would be policy for us to meet this competition, even tho we would be able to ship them 5,000 barrels immediately. I will be glad to know if you can find out which of the cement companies propose to do this. Later we may wish to do something for the Mass. Lime & Cement Company, but just now it does not seem advisable. You need not intimate to Harry that we even contemplate doing anything for him at any time, because it is not at all certain that we will, but if some of our competitors continue to give

them an advantage in price, we may be forced to do something to meet it. For the present we will do nothing, and you may thank Harry and at the same time express your regrets.

Yours very truly, Charles H. Cox.

[fol. 2548] DEF'TS' EX. NO. D-512

May 2, 1921.

DEAR MR. NAYLOR: Referring to yours of April 27th regarding contract placed with the Lehigh Company by the American Clay & Cement Corporation, for approximately 12,000 barrels on New York State Highway No. 8030, the delivery point for this work is Machias, New York, at this point the Universal rate governs and it would be necessary for us to take a freight absorption of seven cents per barrel, which would make the job net us $1.73 with the discount in. As this net was so low advised Mr. Denniston that we would not care to ship this work.

Very truly yours, —— ——, Assistant to President. WMF: HD.

[fol. 2548½] DEF'TS' EX. NO. D-513

May 2, 1921.

To Salesmen:

I am sure that you will be pleased to know that our shipments for April were 150,050 barrels of Dragon cement. You will recall that we set a mark of 150M barrels, and it is certainly gratifying to the management to know that this mark was reached. It is important, particularly in the early months of the year, that we get as heavy shipments as possible, and I will personally appreciate anything that you may do to secure another 150,000 barrels for May. Single carload lots at market are desirable, as well as contract offers. The disturbing feature about the present situation is not in the movement at the moment, so much as it is the absence of contracts for future delivery, and the management would appreciate your further activities along those lines.

Again expressing appreciation for your efforts during April, I am,

Yours very truly, Smith, Sales Manager.

To Mr. Pruden, Mr. Miller, Mr. Demler, Mr. Wyckoff, Mr. Grover, Mr. Sminck, Mr. Potter, Mr. Vollmer, Mr. Larimer, Mr. Danner, Mr. Cumberland, Mr. Airey, Mr. Maloney.

[fol. 2549] DEF'TS' EX. NO. D-514

Glens Falls Portland Cement Co.

Boston, Mass., April 28, 1921.

George F. Bayle, Pres. Glens Falls Portland Cement Co., Glens Falls, N. Y.

DEAR SIR: For your information beg to advise a week or ten days ago the Turner Construction Co. asked for prices on 30,000 barrels of Cement for shipments to Andover, Massachusetts; work for the American Woolen Company.

I followed these people very closely as well as our Lawrence dealer, B. L. McDonald, but we were not successful in getting this contract and it appears that the Pennsylvania Portland Cement Company secured same.

Talking the situation over with the Turner Construction Company, they state that they had a considerable lower price from the Pennsylvania people and for that reason placed the order with them.

[fol. 2549½] It appears on several contracts of any size which have been awarded recently there has been some kind of a cut made by the manufacturer. Then there seems to be a persistent rumor in the market that the present Cement base price would soon be lower.

We have at this time in Boston and vicinity two large jobs coming along; one calling for 15,000 barrels, the other calling for 25,000 barrels.

I am quoting them at the present market price but if certain manufacturers continue to cut prices no doubt the above work will go for less money.

I am perfectly willing and prefer to sell Cement on the market but would like your opinion as to any idea what the future market price may be.

Very truly yours, C. E. Tileston.

[fol. 2550] DEF'TS' EX. NO. D-515

Apr. 29, 1921.

Mr. C. E. Tileston, 18 Tremont St., Boston, Mass.

DEAR SIR: I have your favor of the 28th inst. regarding the 30,000 bbls. purchased by the Turner Construction Co. for the American Woolen Company's job.

I am satisfied from what you wrote us some time ago, and from information obtained in New York City, that some of the Companies have been selling cement on what they call a "replacement value." In other words, at prices which were made on contracts taken early last year. I presume on the theory that as they were unable to complete these contracts during 1920 they want to be "good fellows" and make good now.

We have always had some Companies in the business who are looking for excuses to make lower prices, and I expect that we always will have some of that tribe to contend with.

We feel that if we are to make any lower prices we should make them to everyone, and treat all alike, and this will be our policy.

Regarding the rumors of lower prices to be made in the near future, [fol. 2550½] we have heard these from several quarters, and have investigated them, but cannot find any reason for believing that this will happen. From what I can learn, I do not now expect that any further reduction will be made. However, with the clause in our contract it seems that the dealer or contractor is fully protected in the event of a further decline.

It is getting rather late, and we are anxious to close some good contracts, and if there is anything in sight that you can get, I hope you will do your utmost to secure it.

Yours truly, —— ——, President. GFB:MLC.

[fol. 2551] DEF'TS' EX. NO. D-516

June 9, 1921.

Mr. J. W. Stinson, Manager Knickerbocker Portland Cement Company, Inc., Boston, Mass.

DEAR MR. STINSON: The shipments into your territory for the first five months of this year show a decrease of 42,924 barrels as compared with the same period in 1920.

While I realize that conditions have been unusual in the Boston district this year, a Herculean effort must be made by yourself and the salesmen to improve the shipments for the balance of this year. I sincerely hope that an improvement can be shown at an early date.

Very truly yours, A. D. Naylor, President.

Copy to Mr. Floring.

[fol. 2551½] DEF'TS' EX. NO. D517A

Allentown Portland Cement Company

Trade Practices Exhibit

Summary of the Files of Invoices, Correspondence and Quotations and the Ledgers and Other Documentary Evidence of Allentown Portland Cement Company Showing the Trade Practices of the Company

No. 1

Practice as to Time Limit for Acceptance of Trade Quotations

In 1910 this company's trade quotations were for acceptance in a time limited on the quotation from "Promptly" to 40 days. The time

for acceptance was gradually lessened; and in 1915 was from five to fifteen days. Since the beginning of 1916 the quotations have been for immediate acceptance.

[fol. 2552] No. 2

Practice as to Time of Shipment of Trade Orders as Specified in Quotation

1910 to 1915 inclusive the time of shipment limited in trade quotations varied, usually being thirty days. Since the beginning of 1916 quotations have been for shipment within fifteen days from the date of the order.

No. 3

Practice as to Quantity Limit in Trade Quotations

Prior to 1916 this company's trade quotations have no expressed limit on quantity. Since 1916 its quotations have been limited to one carload unless otherwise agreed.

No. 4

Practice as to Cash Discount

This company allowed a cash discount of 1c. per bbl., for payment within ten days from the date of the invoice, from the start of the plant in 1910 until the latter part of January, 1914. From January, 1914, to January, 1916, it allowed a cash discount of two cents a barrel. From January, 1916, to July 13th, 1920, it allowed a cash discount of five cents a barrel. Since the latter date it has allowed a cash discount of ten cents a barrel.

[fol. 2552½] This company has adhered quite rigidly to the time limitation and has seldom allowed a discount where payment was not made within ten days. There has been no change in its practice in this regard since 1910.

No. 5

Practice as to Selling Cement at a Price Including Packages

This company's practice has always been to quote at a price for cement including the package. The only requests to quote cement separate from the package have been from the United States Government.

No. 6

Practice as to Dating of Invoices

This company has always dated its invoices on the day of shipment.

No. 7

Practice as to Assuming Responsibility for Loss or Damage in Transit

This company's early contracts of sale and quotations were at a price f. o. b. destination, without specific reference to damage in transit. From 1914 until some time in 1916 its contracts expressly [fol. 2553] recognized liability of the company for loss or damage in transit. Since the latter part of 1916 the company's contracts and quotations have expressly disclaimed liability for loss in transit.

No. 8

Practice as to Orders Entered for Shipment on a Certain Date

From the spring of 1916 until the spring of 1921 this company's quotations contained a clause that orders entered for shipment on a specific date would be shipped on that date unless sooner ordered out by the purchaser. Such a clause did not appear in the company's earlier quotations, nor in those issued since early in 1921.

No. 9

Practice as to Making Specific Job Quotations in Advance of the Time Bids are to be Opened.

This company has never limited its specific job quotations with reference to the time that bids are to be received and has always made specific job quotations on request.

[fol. 2553½] No. 10

Practice as to Time Limit for Acceptance of Specific Job Quotations

From 1913 to 1916 inclusive this company's quotations on specific jobs were in special letters on each job, and the time for acceptance was usually limited to fifteen days from the date of the quotation. Since 1916 the company has used a printed form of quotation on specific jobs that time of acceptance is limited to five days from the date of the award of the contract, and in any event to a period sometimes fifteen days and sometimes thirty days from the date of the quotation. From 1916 to 1920 most of the quotations were for acceptance within thirty days. Since 1920 they have been for acceptance within fifteen days.

No. 11

Practice as to Requiring Execution of Formal Contract After Specific Job Quotation has been Accepted

Prior to 1916 this company required the execution of a formal contract after a specific job quotation had been accepted. Since 1916 the company has not required the execution of a separate formal contract, and the acceptance of the quotation, which is made in duplicate, is the only contract which has been required since 1916.

[fol. 2554]

No. 12

Practice as to Requiring a Written Contract Between Dealer and Consumer Before Entering into a Specific Job Contract with the Dealer

Since 1916 this company's specific job quotation sheets require that a written contract be entered into between the dealer and the consumer, and the filing of such contract with the company. The company has no record of ever having enforced this clause.

No. 13

Practice as to Entering into a Specific Job Contract with the Dealer, Before He Had Sold the Cement to the Consumer

This company has no knowledge of ever having entered into a contract with a dealer for a specific work contract in which the dealer had not sold the cement to his customer.

No. 14

Practice as to Declining to Enter into Specific Job Contracts Before the Construction Work was Ready to Proceed

This company has never declined to make a specific job contract because the plans for the construction work had not been drawn or [fol. 2554½] because the time of completion of the construction work had not been estimated or because the bids or proposals for the construction work had not been asked for.

No. 15

Practice as to Minimum Quantity to be Sold under a Specific Job Contract

This company has never made specific job contracts for less than one carload.

No. 16

Practice as to Permissible Variations in Quantity on Specific Job Contracts

Prior to 1916 this company's specific job contracts were sometimes for a fixed quantity without allowable variation and sometimes for a fixed quantity with a variation of ten or fifteen per cent., more or less. From 1916 until the early part of 1921 the specific job contracts have been limited to the actual quantity needed, but not to exceed 110 per cent. of the amount stated in the contract. Since 1921 they have been for a named quantity, with no allowable variation.

No. 17

[fol. 2555] Practice as to Inserting in Specific Job Contracts a Limitation on Maximum Shipment Per Month

Since 1916 this company's specific job quotations have contained a blank space for a provision limiting the maximum amount of shipments that may be called for in any one month; it has not, however, been customary to fill in this clause except in the case of large contracts.

No. 18

Practice as to Requiring a Signed Monthly Report From the Dealer Holding a Specific Job Contract, Showing His Deliveries on the Specific Job

This company's contracts have never required a signed monthly report from the dealer showing his deliveries on the specific job.

No. 19

Practice as to Making Blanket Contracts

This company made blanket contracts until January 1st, 1919. It has made none since that time.

No 20

[fol. 2555½] Practice as to Selling Railroads

Prior to 1919 this company sold railroads requirement contracts for a year at the consumers' price. Since 1919 it has sold the railroads at the dealers' price either for current requirements, fifteen day shipment, or on its regular specific job contract.

No. 21

Practice as to Selling Industrials

This company has always charged industrials the consumers' price. Prior to 1919 it sold them requirement contracts for a year. Since

1919 it has sold them only on current orders, fifteen day shipment, or its regular specific job contracts.

No. 22

Practice as to Selling Manufacturers of Concrete Products

Prior to January 1st, 1919, this company sold to concrete products manufacturers blanket requirement contracts for delivery during the current year at a fixed price. Since January 1st, 1919, its sales for future delivery to concrete products manufacturers have been limited to its usual specific work contracts for a specific amount for a specific job. It has always charged the consumers' price to concrete products manufacturers.

[fol. 2556] No. 23

Practice as to the Use of an Order Blank to be Signed by the Customer

Since this company commenced business it has used a form of order blank with a place for the buyer's signature as well as the salesman's signature. Sometimes the signature of the buyer has been waived. The form was changed in 1916, setting out the terms and conditions of sale more fully than they had been set out in the original form as first gotten out by the company.

No. 24

Practice as to a Separate Charge for Bin Tests

In 1914 this company made a special charge for bin tested cement of six cents a barrel. From 1915 to 1921 it charged three cents a barrel. Since June, 1921, it has made no charge for this service.

No. 25

Practice as to Assuming the Expense of Commercial Laboratory Tests

This company has never borne the charge for commercial laboratory tests.

[fol. 2556½] No. 26

Practice as to Repurchase of Cloth Sacks

This company has always strictly limited its repurchase of sacks to those which were in serviceable condition.

No. 27

Practice as to Quoting Dealers for Shipment to Towns Other Than Their Home Towns

This company's regular practice has been to quote and sell at the dealers' price to dealers at their own home towns. There are only a very few exceptions to this rule.

No. 28

Practice as to Selling at the Dealers' Price to Persons Who Do Not Comply With Following Definition

"A dealer is a merchant, firm or corporation regularly engaged in selling portland cement and other building materials purchased by him for resale only, who is also properly equipped with storage facilities, supplied with teams or trucks and is recognized in his home town as a building material dealer."

[fol. 2557] This company has never restricted its sales at the dealer's price to persons complying with this definition.

No. 29

Practice as to a Dealer's Differential In Price

On December 12th, 1916, this company fixed a dealer's differential of ten cents a barrel, which it has allowed since that time. Prior to that time, so far as its records indicate, it had allowed a discount of five cents a barrel.

No. 30

Practice as to Payment of Commissions to Dealers on Cement Sold Direct to Consumers

This company has occasionally paid a commission to a dealer on cement sold direct to a consumer, but the instances where this has been done are very rare, only four records being found from 1910 to 1921.

No. 31

Practice as to Giving Special Concessions to Buyers

This company has occasionally granted a rebate on cement shipped [fol. 2557½] just before a reduction in price. It has found no record of any special concession in price to induce a sale.

No. 32

Practice as to Mixing Waterproofing Compounds With Cement at the Mills

This company in 1915 and 1916 experimented in a small way with waterproofing compounds, but discontinued it in 1916 without putting any appreciable amount on the market, having found that it was not commercially satisfactory because it was necessary to guarantee the work over which the company had no control.

No. 33

Practice as to Giving Advance Notice of Change in Price

This company has never given advance notice of price change.

No. 34

Practice as to Guaranteeing Sales for Future Delivery Against a Decline in Price

This company's contracts did not contain a clause guaranteeing [fol. 2558] its price against a decline until the middle of 1920; since that date its contracts for future delivery have contained such a clause.

No. 35

Practice as to Making Efforts to Induce Dealers Not to Resell Below the Consumers' Price

This company has never made any effort to influence the price at which dealers should sell its cement.

No. 36

Practice as to Requiring Dealers to State in Their Bids the Name of the Brand on Which They Were Bidding

This company has never required dealers to state in their bids the name of the brand on which they are bidding.

No. 37

Practice as to Membership in Dealers' Organizations

This company was a member of the National Dealers' Supply Association of Chicago in 1916 and 1917, and of the New York State Dealers' Supply Association in 1917. It has not been a member of any dealers' organization since the latter date.

Examined and found correct F. Weibel.

[fol. 2558½] DEF'TS' EX. NO. D-517-B

Alpha Portland Cement Company

Trade Practices Exhibit

Summary of the Files of Invoices, Correspondence and Quotations and the Ledgers and Other Documentary Evidence of Alpha Portland Cement Company Showing the Trade Practices of the Company

No. 1

Practice as to Time Limit for Acceptance of Trade Quotations

This company's trade quotations are now for immediate acceptances, and that practice has been observed since February 9th, 1915. Prior to that date occasional quotations were for immediate acceptance, but there was no settled practice.

[fol. 2559] No. 2

Practice as to Time of Shipment of Trade Orders as Specified in Quotation

Prior to November 1st, 1912, this company had no uniform practice as to the time within which shipments must be made, the individual quotations showing considerable variation in that regard. From November 1st, 1912, to February 24th, 1915, the quotations were for shipment within thirty days of the date of the quotation. From February 24th, 1915, to February 9th, 1916, shipments were to be made within ten days from the date of the order. Since February 9th, 1916, shipments were to be made within fifteen days of the date of the order.

No. 3

Practice as to Quantity Limit in Trade Quotations

Prior to February 18th, 1915, this company's trade quotations were limited in quantity to an amount specified, depending upon the needs of the customer and the business in hand. At times this quotation was limited to one car. From February 18th, 1915, to February 24th, 1915, the company quoted limiting the quantity to two carloads. From February 24th, 1915, to February 9th, 1916, the quotation was for "a quantity to be ordered" by the customer; and that description of the quantity continued until December 31st, 1920; since the latter date it has been for a quantity to be mutually agreed upon.

[fol. 2559½] In the latter part of May, 1920, this company discontinued for a time sending out general quotations, but in a few cases over a period of about three months quoted in special cases only with a limitation of one carload.

No. 4

Practice as to Cash Discounts

The company allowed a cash discount of two per cent. for cash payment in ten days from June 5, 1895, to July or August, 1905. From July or August 1905, to January, 1909, one per cent was allowed. From January 1909, to January 1914, it allowed a cash discount of one cent per barrel. From January 1914, to November 1915, it allowed a discount of two cents per barrel. From November 1915, to July 1920, five cents per barrel, and from July, 1920, to the present time ten cents per barrel. The company has generally strictly enforced the ten day period for taking discount.

No. 5

Practice as to Selling Cement at a Price Including Packages

This company has followed the practice of selling cement at a price including packages since as early as 1901. Since January 1, 1903, the only exceptions have been the departments of the United States Government in certain instances and sales in bulk.

[fol. 2560]

No. 6

Practice as to Dating Invoices

This company has no record of having dated an invoice other than on the day shipment was made except in the case of shipments made on holidays, when the invoices are made out on the succeeding day.

No. 7

Practice as to Assuming Responsibility for Loss or Damage in Transit

This company's quotations and contracts have made it a term of sale that the company should not be responsible for loss or damage en route at various periods since at least as early as 1902.

From 1902 until 1909 quotations for specific work invariably disclaimed responsibility. Quotations for specific work invariably contained this disclaimer, but no reference to it was made in the contracts during this period.

Between 1909 and 1916 except in very few cases no mention of this regulation was made in either quotation or contract. Since 1916 the disclaimer appears in both quotations and contracts.

As a matter of policy the company frequently assumed responsibilty for such damage in spite of its disclaimer in contracts of sale.

[fol. 2560½]

No. 8

Practice as to Orders Entered for Shipment on a Certain Date

This company has never made it a term of sale that orders entered for shipment on a specific date would be shipped on that date unless sooner ordered out by the purchaser.

No. 9

Practice as to Making Specific Job Quotations in Advance of the Time Bids are to be Opened

This company does not limit its specific job quotations to ten days before the date the bids are to be received. Its specific job quotations are limited to acceptance in not more than fifteen days and within that limit its practice in quoting on specific job work depends upon the amount of business that it has booked.

No. 10

Practice as to Time Limit for Acceptance of Specific Job Quotations

This company limits the time for acceptance of its specific job quotations to either five or fifteen days, and has done so since the middle of 1916. Prior to that time its specific job quotations were [fol. 2561] limited for acceptance in varying periods ranging from immediate acceptance to 60 days.

No. 11

Practice as to Requiring Execution of Formal Contract After Specific Job Quotation Has Been Accepted

This company has uniformly required the execution of a formal specific job contract following the quotation therefor since at least as early as 1906.

No. 12

Practice as to Requiring a Written Contract Between Dealer and Consumer Before Entering into a Specific Job Contract with the Dealer

This company's quotations and contracts have never required that a written contract be required between the dealer and the consumer before it enters into a specific job contract with the dealer. Upon the request of its dealers it furnishes them occasionally a form of contract for the dealer to use with his consumer. Such forms are seldom asked for by dealers.

[fol. 2561½] No. 13

Practice as to Entering into a Specific Job Contract with the Dealer Before He Had Sold the Cement to the Consumer

This company has not knowingly sold to dealers on specific job contracts before the dealer had sold the cement to his customer, but such sales have from time to time been made without the company's knowledge.

No. 14

Practice as to Declining to Enter into Specific Job Contracts Before the Construction Work was Ready to Proceed

This company has never refused to enter into specific job contracts on the ground that plans for the construction work had not been drawn or that the time of completion of the construction work had not been estimated or that bids or proposals for the construction work had not been asked for.

No. 15

Practice as to Minimum Quantity to be Sold Under a Specific Job Contract

This company has never made a specific job contract for less than one carload.

[fol. 2562] No. 16

Practice as to Permissible Variations in Quantity on Specific Job Contracts

This company's specific job contracts are for a fixed amount except that a very small proportion of them provided for a varying quantity between two stated amounts. Prior to the fall of 1916 the amount called for under the contract was more or less by a certain percentage which varied between 10 and 25 per cent. In every year from 1905 to 1916 a number of contracts appear for a fixed quantity.

No. 17

Practice as to Inserting in Specific Job Contracts a Limitation on Maximum Shipment per Month

This company's specific job contracts do not specify a stated maximum amount of shipment per month. Occasionally in the early history of this company, that is from about 1898 to 1906, there were times when monthly limitations of shipment were put on specific job contracts, but no such limitations have been used since that date.

[fol. 2562½] No. 18

Practice as to Requiring a Signed Monthly Report from the Dealer Holding a Specific Job Contract Showing His Deliveries on the Specific Job

This company has never required a signed monthly report from the dealer showing his deliveries on the specific job.

No. 19

Practice as to Making Blanket Contracts

Prior to 1905 this company customarily made yearly contracts with its customers for their estimated requirements for the year. Beginning with 1906 the company began making an effort which has continued until the present time to reduce their blanket contracts and to substitute therefor specific job contracts. Since about 1909 the company has had very few blanket contracts except with the United States Government, States, steam railroads and industrials.

No. 20

Practice as to Selling Railroads

This company's sales to railroads prior to January, 1915, were made for future delivery at the consumers' price, there being no [fol. 2563] difference between dealers' and consumers' price up to that time. Since 1915 and until 1920 this company sold to railroads for future delivery at the consumers' price. Since 1920 the railroads are sold for future delivery at the dealers' price. This company has always sold railroads requirement contract.

No. 21

Practice as to Selling Industrials

Until August, 1918, this company made contracts with industrial plants for their annual requirements at a fixed price. Since that time they are sold the same way as other consumers, either at a consumers' price for immediate acceptance, fifteen day shipment or a definite specific job contract.

This company has always sold to electric lines in the same way as to other consumers.

No. 22

Practice as to Selling Manufacturers of Concrete Products

Until 1917 this company sold to concrete products manufacturers for future delivery at the consumers' price. No sales were made for future delivery to concrete products manufacturers in 1918 and

1919. In 1920 such sales were made at the consumers' price for future delivery, but only on specific jobs.

[fol. 2563½] No. 23

Practice as to the Use of an Order Blank to be Signed by the Customer

This company has used an order form to be signed by its customers since at least as early as 1910. It now uses the same form which the company used prior to 1914.

No. 24

Practice as to a Separate Charge for Bin Tests

This company used a separate charge for bin tests of five or six cents as early as August 30, 1912, and continued to use a charge for this service until February, 1915, when it was abandoned. The company began making a bin test charge of three cents on June 1st, 1915, which was continued until the spring of 1921 when it was finally abandoned.

No. 25

Practice as to Assuming the Expense of Commercial Laboratory Tests

This company has never borne the expense of a commercial laboratory test.

[fol. 2564] No. 26

Practice as to Repurchase of Cloth Sacks

Since the beginning of the company until 1918 this company has had a term of sale in its contracts that it would not repurchase sacks except such as were in serviceable condition and could be used again, but during all that time it credited a considerable number of worthless sacks in every year.

Since 1918 the company has retained title to the sacks when shipped to the customer but its contracts have contained a term that it would only return the deposit to the customer when the sacks were returned in a serviceable condition. During this period however considerable quantities of worthless sacks have been credited in every year.

No. 27

Practice as to Quoting Dealers for Shipment to Towns Other Than Their Home Towns

This company has in every year quoted and sold to dealers at dealers' price for shipment to towns other than their home towns.

[fol. 2564½] No. 28

Practice as to Selling at the Dealers' Price to Persons Who Do Not Comply with Following Definition

"A dealer is a merchant, firm, or corporation regularly engaged in selling Portland cement and other building materials purchased by him for resale only, who is also properly equipped with storage facilities, supplied with teams or trucks and is recognized in his home town as a building material dealer."

This company has never observed this definition in quoting the dealers' price and a large percentage of the customers of the company who receive the dealers' price have never complied with the definition.

No. 29

Practice as to a Dealer's Differential in Price

This company allowed a dealer's differential of five cents a barrel from February 24, 1915, until December 7, 1916, and since that time it has allowed a dealer's differential of ten cents a barrel.

[fol. 2565] No. 30

Practice as to Payment of Commissions to Dealers on Cement Sold Direct to Consumers

This company has in every year paid commissions to dealers on cement sold direct to others.

No. 31

Practice as to Giving Special Concessions to Buyers

This company has no record of having made special concessions to buyers since 1915, with the exception of a few cases in 1921.

No. 32

Practice as to Mixing Waterproofing Compounds with Cement at *at* the mills

This company has never mixed waterproofing compounds with cement at the mills.

[fol. 2565½] No. 33

Practice as to Giving Advance Notice of Change in Price

This company has never given advance notice of price change.

No. 34

Practice as to Guaranteeing Sales for Future Delivery Against a Decline in Price

Prior to 1919 this company had in isolated cases guaranteed sales for future delivery against a decline, but its usual practice was not to make such a guarantee.

Beginning with 1919 all of its sales for future delivery are guaranteed against a decline on such portion of the sale as is shipped during the period in which the market price is lower than the contract price.

No. 35

Practice as to Making Efforts to Induce Dealers Not to Resell Below the Consumers' Price

The only efforts made by this company to influence the price at which dealers would resell cement purchased from it are two circular letters to dealers dated February 24, 1915, and December 7th, [fol. 2566] 1916, respectively. In these circular letters the company expressed the hope that dealers would take advantage of the differential allowed them so as to carry on their business at a profit. There is no reference made to any specific price.

No. 36

Practice as to Requiring Dealers to State in Their Bids the Name of the Brand on Which They Were Bidding

This company has never required dealers to state in their bids the name of the brand on which they were bidding.

No. 37

Practice as to Membership in Dealers' Organizations

From at least as early as 1909 and until the beginning of 1918 this company was an honorary or associate member of various dealers' organizations. From the beginning of 1918 to the present time, this company has not been a member of any dealers' organization.

Examined and found correct.

E. P. Williams.

[fol. 2566½] DEF'TS' EX. NO. D517C

Atlas Portland Cement Company

Trade Practices Exhibit

Summary of the Files of Invoices, Correspondence and Quotations and the Ledgers and Other Documentary Evidence of Atlas Portland Cement Company Showing the Trade Practices of the Company

No. 1

Practice as to Time Limit for Acceptance of Trade Quotations

Until some time in 1916 this company's trade quotations were limited to acceptance within a period which varied at different times between five and thirty days.

Beginning in 1916 its trade quotations are for immediate orders. The company's construction of the term "Immediate orders" has always been "Acceptance within a period of from three to five days."

[fol. 2567] No. 2

Practice as to Time of Shipment of Trade Orders as Specified in Quotation

Until August, 1912, this company's trade quotations were for shipment within periods varying from about forty-five to seventy-five days.

From August, 1912, to March, 1916, they were for shipment within thirty days.

From March, 1916, to the present time this company's trade quotations have been limited to shipment within fifteen days from date of the order.

No. 3

Practice as to Quantity Limit in Trade Quotations

This company's trade quotations have always been limited to one carload.

Prior to 1912 this limitation was expressed in terms of barrels, as for instance—150 barrels.

Since 1912 the company's quotations have expressly declared that orders tendered in excess of a carload would be subject to acceptance by the company.

No. 4

Practice as to Cash Discount

This company has allowed cash discounts as follows:

[fol. 2567½] For some time prior to 1909, 1 per cent for payment in ten days.

From January 21, 1909, to January 21, 1914, 1 cent a barrel for payment in ten days.

From January 21, 1914, to November 15, 1915, 2 cents per barrel for payment in ten days.

From November 15, 1915, to July 17, 1920, 5 cents a barrel for payment in 10 days.

Since July 17, 1920, 10 cents a barrel for payment in ten days.

The company has in every year since at least 1914 allowed discount after the ten-day period.

No. 5

Practice as to Selling Cement at a Price Including Packages

This company's general practice has been to quote cement at a price including packages as far back as 1906.

The only exceptions to this rule are shipments in bulk and some shipments to the United States Government.

No. 6

Practice as to Dating of Invoices

It has always been this company's practice since it commenced business, to date invoices the day shipments were made to the customers.

[fol. 2568]

No. 7

Practice as ot Assuming Responsibility for Loss or Damage in Transit

Prior to March, 1916, this company's quotations and contracts did not disclaim liability for loss or damage in transit. Beginning March, 1916, and up to the present time its trade quotations disclaimed liability. Beginning in 1917 and up to the present time its contracts have disclaimed liability for loss or damage in transit. This clause, in practice, is not usually enforced.

No. 8

Practice as to Orders Entered for Shipment on a Certain Date

The company's trade quotations since March, 1916, have contained a clause that orders entered for shipment on a specific date, will be shipped on that date, unless sooner ordered out by the purchaser. This clause was not in the quotations prior to that date. In practice, the company has, since 1911, insisted on shipment on date specified in contracts.

[fol. 2568½] No. 9

Practice as to Making Specific Job Quotations in Advance of the Time Bids are to be Opened

Since May 9, 1916, this company did not limit its specific job quotations to any definite time in advance of the letting.

March 16, 1916, to May 9, 1916, quotations were issued for acceptance five days after date of award of contract with a maximum of thirty days.

Prior to March 16, 1916, and as far back as 1911 specific job quotations were limited as to acceptance date, but without reference to the date set for the award of the contract.

No. 10

Practice as to Time Limit for Acceptance of Specific Job Quotations

From 1909 to 1915 this company's specific job quotations were issued for acceptance within periods varying from five to twenty-five days from the date thereof—one quotation having been issued on September 23, 1909, for acceptance prior to November 20, 1909.

Early in 1916, specific job quotations were issued for acceptance within five days after the date of the award of the contract, and with a maximum of thirty days, and this continued to May 9, 1916.

Since that date specific job quotations are made for acceptance for a period generally between ten and thirty days from the date thereof

[fol. 2569] No. 11

Practice as to Requiring Execution of Formal Contract After Specific Job Quotation Had Been Accepted

This company's specific job quotations have always, since as early as 1903, contained a clause obligating a purchaser to execute the regular form of specific job sales contract after the acceptance of the quotation.

In practice this requirement has not always been enforced and the company has often delivered the cement on *on* the mere acceptance of the quotation.

No. 12

Practice as to Requiring a Written Contract Between Dealer and Consumer before Entering into a Specific Job Contract with the Dealer.

Since early in 1916, and until 1918, this company's specific job quotations have contained a clause requiring a written contract, at the company's option, between dealer and consumer, before entering into a specific job contract with the dealer. Prior to 1916 and subsequent to 1918 no such clause appears. This provision has never been enforced.

[fol. 2569½]

No. 13

Practice as to Entering into a Specific Job Contract with the Dealer Before He had Sold the Cement to the Consumer

This company has always sought to limit sales on specific job contracts with the dealer in cases where the dealer had a contract for resale.

No. 14

Practice as to Declining to Enter into Specific Job Contracts before the Construction Work was Ready to Proceed

This company has never declined to enter into a specific job contract solely because the plans for the construction work had not been drawn, because the time of the completion of the construction work had not been estimated or because the bids or proposals for the construction work had not been asked for.

No. 15

Practice as to Minimum Quantity to be Sold under a Specific Job Contract

This company has never made a specific job contract for less than one carload.

[fol. 2570]

No. 16

Practice as to Permissible Variations in Quantity on Specific Job Contracts

For some time prior to November 14, 1911, this company's specific job quotations and contracts contained a provision estimating the quantity called for within a fifteen per cent increase or decrease.

On November 14, 1911, this practice was abandoned. The practice was reinstated, however, on March 12, 1913, and continued until August 18, 1914, when it was again discontinued.

Early in 1916 the contracts contained a ten per cent variation clause which was discontinued, however, on May 9, 1916.

From that date to the present time this company's specific job quotations and contracts have made no mention of any percentage variation on the quantity named, but are made for a quantity which is estimated and not to be exceeded, or for requirements estimated.

No. 17

Practice as to Inserting in Specific Job Contracts a Limitation on Maximum Shipment Per Month

Ever since December 11, 1905, this company's specific job contracts have contained a clause specifying a stated maximum amount of shipment per month.

[fol. 2570½] No. 18

Practice as to Requiring a Signed Monthly Report from the Dealer Holding a Specific Job Contract, Showing His Deliveries on the Specific Job

This company's present specific job quotation forms contain a provision that the purchaser shall make a monthly report of the deliveries on the specific job, if requested and on forms furnished by the company. This clause does not appear in quotations prior to 1921.

This company's specific job contract forms contain, since 1917, a provision that the purchaser shall make a monthly report of the deliveries on the specific job covered by the contract, if requested by, and on forms furnished by, the company.

This company has no forms for such reports and has never requested such information except from New York City dealers, for a short period in 1918, without success.

No. 19

Practice as to Making Blanket Contracts

This company has always made some blanket contracts in every year.

No. 20

Practice as to Selling Railroads

This company has sold railroads for their requirements since at least 1912 up to the present time. These contracts have been made [fol. 2571] both at the company's dealers' price and consumers' price, no definite policy ever having been maintained.

On December 16, 1918, the company issued a memorandum stating that the present practice of the company was to issue quotations to railroads at the company's consumers' price.

On May 17, 1919, definite instructions were issued to districts which were, in effect, to sell railroads at the company's dealers' price for current business for shipment within fifteen days and for extended delivery for specific work only. This latter memorandum has not been strictly adhered to by the company.

No. 21

Practice as to Selling Industrials

This company has always sold industrials their yearly requirements, sometimes at the dealers' price and sometimes at the consumers' price, depending on whether the customer was a dealer or consumer in the opinion of the company.

No. 22

Practice as to Selling Manufacturers of Concrete Products

This company has sold concrete products manufacturers sometimes at the dealers' price and sometimes at the consumers' price, depend-
[fol. 2571½] ing on whether they are dealers or consumers in the company's opinion. If the order is for a specific job extended deliveries are permitted; otherwise the sales are made for shipment within 15 days.

No. 23

Practice as to the Use of an Order Blank to be Signed by the Customer

This company has used an order form to be signed by the customer for at least fourteen years. The form has varied from time to time but has never been that recommended by the Committee on Trade Practices. The form is usually signed by the customer.

No. 24

Practice as to a Separate Charge for Bin Tests

This company established an extra charge for bin tested cement of six cents a barrel in 1912. This was continued until the middle of 1915 when the charge was reduced to three cents per barrel. That charge was continued until early in 1921, since which time no special charge for bin test has been made.

[fol. 2572] No. 25

Practice as to Assuming the Expense of Commercial Laboratory Tests

This company has never borne the expense of a commercial laboratory test unless in the case of a dispute with a customer as to the quality of cement furnished him, when a test has been made merely as a matter of settlement of the dispute.

No. 26

Practice as to Repurchase of Cloth Sacks

The company's contracts and quotations have always provided that it would not repurchase cloth sacks from its customers that were not in serviceable condition. As a matter of actual practice, however, the company has on numerous occasions since at least as early as 1914 given credit for worthless sacks.

No. 27

Practice as to Quoting Dealers for Shipment to Towns Other Than *Their Home Towns*

It is this company's policy to quote dealers for shipment to their home towns only. There have been a few exceptions to this policy. This policy was adopted by the company as early as 1911.

[fol. 2572½] No. 28

Practice as to Selling at the Dealers' Price to Persons Who Do Not Comply With Following Definition

"A dealer is a merchant, firm or corporation regularly engaged in selling Portland cement and other building materials purchased by him for resale only, who is also properly equipped with storage facilities, supplied with teams or trucks and is recognized in his home town as a building material dealer."

This company has never observed this definition in quoting the dealers' price, nor any other definition, and a great many of the customers of this company who receive and have received its dealers' price have not complied with the above definition or any other specific definition of a dealer.

No. 29

Practice as to a Dealer's Differential in Price

During 1909 and 1910 this company allowed a trade discount of five cents per barrel to dealers.

Beginning in 1910, whenever this company quoted contractors or consumers it quoted them at least five cents per barrel above its dealers' price for the same delivery. This practice continued until March, 1916, on which date this difference was made ten cents per barrel instead of five cents, in certain territory. On December 7, [fol. 2573] 1916, the ten cent differential was put into effect in all territories, and has so continued to the present time.

No. 30

Practice as to Payment of Commissions to Dealers on Cement Sold Direct to Consumers

The policy of this company since as early as 1908 has always been not to pay a commission to a dealer for sales made direct to the consumer, but it has sometimes paid such commission.

No. 31

Practice as to Giving Special Concessions to Buyers

This company has no record of having made any price concessions to buyers before 1921. For the past twenty years it has consistently adhered to the policy of one price. In 1921 in some instances prices lower than the prices which the company was quoting generally were made to buyers.

[fol. 2573½] No. 32

Practice as to Mixing Waterproofing Compounds with Cement at the Mills

This company has never incorporated waterproofing compounds at its mills, with the exception of a few instances in 1916. The experience was so unsatisfactory that the company has never attempted to repeat it.

No. 33

Practice as to Giving Advance Notice of Price Change

This company has never given any advance notice of price changes, with one possible exception, in 1911.

No. 34

Practice as to Guaranteeing Sales for Future Delivery Against a Decline in Price

This company has never guaranteed sales against a decline in price in any manner whatever prior to 1919. Since 1919 specific job contracts have contained a clause guaranteeing that the price to be charged would not be higher than the current market price of Atlas cement at the time of delivery.

[fol. 2574] No. 35

Practice as to Making Efforts to Induce Dealers Not to Resell Below the Consumers' Price

This company has never attempted to induce the dealer not to resell below its consumers' price.

No. 36

Practice as to Requiring Dealers to State in Their Bids the Name of the Brand on Which They Were Bidding

This company has never required dealers to state in their bids the name of the brand on which they are bidding.

No. 37

Practice as to Membership in Dealers' Organizations

Prior to January, 1916, this company was a member of some dealers' associations. Subsequent to that date it has not held membership in any dealers' association, to the best of its knowledge.

Examined and found correct.

L. G. McConnell.

April 24, 1921.

[fol. 2574½] DEF'TS' EX. No. D-517D

Bath Portland Cement Company

Trade Practices Exhibit

Summary of the Files of Invoices, Correspondence and Quotations and the Ledgers and Other Documentary Evidence of Bath Portland Cement Company Showing the Trade Practices of the Company

No. 1

Practice as to Time Limit for Acceptance of Trade Quotations

From 1919 to date this company's trade quotations have been for immediate acceptance. The company has no record of time limit for acceptance of quotations prior to 1919.

[fol. 2575] No. 2

Practice as to Time of Shipment of Trade Orders as Specified in Quotation

This company's trade quotations are for shipment within fifteen days from the date of order. The company has no record of the time limitation for shipment prior to 1919.

No. 3

Practice as to Quantity Limit in Trade Quotations

This company's trade quotations are for a quantity not to exceed one car unless otherwise agreed to. The company has no record of when this practice was adopted.

No. 4

Practice as to Cash Discount

During 1913 this company's cash discount was one cent per barrel for payment in 10 days; from January, 1914, to October,

1915, two cents a barrel; from October, 1915, until June, 1920, five cents a barrel; since June, 1920, ten cents per barrel. The time limit for taking the discount has not been enforced.

[fol. 2575½] No. 5

Practice as to Selling Cement at a Price Including Packages

This company has no record that it has ever quoted otherwise than at a price including packages, except that the Navy Department of the United States Government regularly requests price without the cost of packages; or in the case where a customer asked quotations for shipment in bulk.

No. 6

Practice as to Dating of Invoices

This company has never dated invoices other than on the day shipment was made except where delivery is made by lighter in New York, in which case invoices are dated the day of delivery, and when deliveries are made in truck lots from the mill, in which case invoices are dated the day after shipment.

No. 7

Practice as to Assuming Responsibility for Loss or Damage in Transit

This company's contracts of sale limit its responsibility to delivery to the carrier, and provide that it shall not be responsible for damage in transit. This clause has been in the company's contracts of sale [fol. 2576] since the beginning of 1916. Prior to that time nothing as to responsibility for loss or damage in transit was mentioned in its contract forms.

No. 8

Practice as to Orders Entered for Shipment on a Certain Date

This company does not make it a term of sale that orders entered for shipment on a specific date will be shipped on that date unless sooner ordered out by the purchaser.

No. 9

Practice as to Making Specific Job Quotations in Advance of the Time Bids are to be Opened

Since March, 1916, this company's specific job quotations have contained the clause that the quotation is for acceptance within five days of the formal award of the contract. The company, however, does not decline to make specific job quotations more than ten days before the date bids are to be received.

[fol. 2576½] No. 10

Practice as to Time Limit for Acceptance of Specific Job Quotations

This company's present specific job quotations are limited for acceptance within fifteen days. This has been the case since December 1, 1918. Prior to that date its practice was to limit the acceptance within a varying period between five and thirty days

No. 11

Practice as to Requiring Execution of Formal Contract After Specific Job Quotation Has Been Accepted

This company now requires a specific job sales contract to be executed after its specific job quotation has been accepted. This has been its practice since about January 1, 1919. Prior to that date the customer wrote his acceptance on the quotation sheet and no other contract was made.

No. 12

Practice as to Requiring a Written Contract Between Dealer and Consumer Before Entering into a Specific Job Contract with the Dealer

This company does not now and never has required a contract between the dealer and the consumer before entering into a specific job contract with the dealer.

[fol. 2577] No. 13

Practice as to Entering Into a Specific Job Contract With the Dealer, Before He Had Sold the Cement to the Consumer

This company has never knowingly entered into a specific job contract with a dealer before the dealer had sold the cement to his customer.

No. 14

Practice as to Declining to Enter Into Specific Job Contracts Before the Construction Work Was Ready to Proceed

This company has no record of ever having declined to make a specific job contract because the time of the completion of the construction work had not been estimated or because the bids or proposals of the construction work had not been asked for or because the plans for the construction work had not been drawn.

No. 15

Practice as to Minimum Quantity to Be Sold Under a Specific Job Contract

This company has no record of ever having made a specific job contract for less than one carload.

[fol. 2577½] No. 16

Practice as to Permissible Variations in Quantity on Specific Job Contracts

This company's present form of specific job contract has been in force since January 1, 1919, and is for the sale of a fixed number of barrels with no variation permitted. From 1916 to 1918 inclusive its practice was to allow a variation of 10 per cent. in quantity more or less. Before 1916 no variation was permitted.

No. 17

Practice as to Inserting in Specific Job Contracts a Limitation on Maximum Shipment per Month

This company's present contracts in use since January, 1919, do not require a stated maximum shipment per month. From 1916 to 1918 inclusive they provided for maximum monthly shipments at the company's option. In 1915 no maximum monthly shipment clause was included.

No. 18

Practice as to Requiring a Signed Monthly Report From the Dealer Holding a Specific Job Contract, Showing His Deliveries on the Specific Job

This company has never required a signed monthly report from the dealer, showing deliveries on specific job contracts.

[fol. 2578] No. 19

Practice as to Making Blanket Contracts

It has always been the policy of this company not to make blanket contracts. Such contracts have been made, however, in a few cases in 1915 and 1918.

No. 20

Practice as to Selling Railroads

This company has sold railroads for their annual requirements as far back as 1914 and still does so. Prior to 1917 its sales were made at both dealers' and consumers' prices. Since 1917 when the Government took over the railroads, they have been sold at the dealer's price.

No. 21

Practice as to Selling Industrials

This company does not sell to an industrial plant except for the requirements of some specific work, but the company has made con-

tracts in the form of blanket contracts with industrials. Prior to 1918 the company's practice was to make such contracts.

[fol. 2578½] No. 22

Practice as to Selling Manufacturers of Concrete Products

This company sells to concrete products manufacturers only for fifteen days shipment or for specific work.

In 1916 some sales were made for the requirements of cement block manufacturers.

The company has no settled policy regarding price to concrete products manufacturers, but in most cases it is the dealers' price since they are classed as dealers.

No. 23

Practice as to the Use of an Order Blank to Be Signed by the Customer

This company has never used an order form to be signed by the customer. Since 1919 it has used an order form which the salesman signs but it bears no place for the customer's signature and is never signed by him.

No. 24

This company's contracts for 1915 contained no charge for bin tests. Since 1916 and until 1918 a charge of three cents a barrel for bin test was made. The company's contracts beginning 1919 make no mention of bin test charge although it has been the company's policy to charge three cents per barrel for bin tests until the [fol. 2579] early part of 1921. Since that time no charge has been made for bin tests.

No. 25

Practice as to Assuming the Expense of Commercial Laboratory Tests

This company has never borne the expense of a commercial laboratory test unless in the case of a dispute with a customer as to the quality of the cement furnished him, when a test has been made merely as a matter of settlement of the dispute.

No. 26

Practice as to Repurchase of Cloth Sacks

This company has never made a practice of repurchasing cloth sacks from its customers that were not in serviceable condition. Occasionally there have been disputes with customers in which the question has been compromised and allowance has been made for sacks which the company's count did not consider serviceable.

[fol. 2579½] No. 27

Practice as to Quoting Dealers for Shipment to Towns Other Than Their Home Towns

This company has always quoted and sold dealers at the dealers' price for shipment to towns other than their home towns.

No. 28

Practice as to Selling at the Dealers' Price to Persons Who Do Not Comply With Following Definition

"A dealer is a merchant, firm, or corporation regularly engaged in selling portland cement and other building materials purchased by him for resale only, who is also properly equipped with storage facilities, supplied with teams or trucks and is recognized in his home town as a building material dealer."

This company has never observed this definition in quoting the dealers' price, and a large percentage of the customers of this company who receive the dealers' price have never complied with the definition.

[fol. 2580] No. 29

Practice as to a Dealer's Differential in Price

Prior to December 9, 1916, this company allowed a dealer a differential of five cents per barrel. From December 9, 1916, to date they have charged a contractor ten cents a barrel above the dealers' price. In 1920 there have been a few exceptions consisting of cases in which sales were made to a contractor or consumer showing a differential of twenty cents per barrel.

No. 30

Practice as to Payment of Commissions to Dealers on Cement Sold Direct to Consumers

This company has from time to time paid commissions to dealers on cement sold direct to others.

No. 31

Practice as to Giving Special Concessions to Buyers

This company has from time to time made special concessions to buyers.

[fol. 2580½] No. 32

Practice as to Mixing Waterproofing Compounds With Cement at the Mills

This company has no record of ever having mixed waterproofing compounds with its cement at its mills.

No. 33

Practice as to Giving Advance Notice of Change in Price

This company has never given advance notice of its changes in price.

No. 34

Practice as to Guaranteeing Sales for Future Delivery Against a Decline in Price

Prior to 1921 this company's contracts have never guaranteed against a decline in price. Since that year contracts contain the statement that the price stated in the contract will be reduced if there is any reduction in the market price of the cement during the year.

[fol. 2581] No. 35

Practice as to Making Efforts to Induce Dealers Not to Resell Below the Consumers' Price

This company has never attempted to induce the dealer not to resell below the consumers' price.

No. 36

Practice as to Requiring Dealers to State in Their Bids the Name of the Brand on Which They Were Bidding

This company has never required dealers to state in their bids the name of the brand upon which they were bidding.

No. 37

Practice as to Membership in Dealers' Organization

This company was a member of the Mason Material Dealers Association of New Jersey from March, 1908, to May 1st, 1917. It has never belonged to any other dealers' association.

Examined and found correct.

Herbert C. Rafetto.

[fol. 2581½] DEF'TS' EX. NO. D-517E

Coplay Cement Manufacturing Company

Trade Practices Exhibit

Summary of the Files of Invoices, Correspondence and Quotations and the Ledger and other Documentary Evidence of Coplay Cement Manufacturing Company, Showing the Trade Practices of the Company

No. 1

Practice as to Time Limit for Acceptance of Trade Quotations

In 1915 this company's trade quotations were for acceptance in varying periods, some of them stating no period of acceptance and others limited to five and sometimes seven days. Beginning in the early part of 1916 and until the present time its form quotations have read for immediate acceptance. It has quoted during this period in letters to customers for five days' acceptance, but most of its later quotations have been for immediate acceptance.

[fol. 2582] No. 2

Practice as to Time of Shipment of Trade Orders as Specified in Quotation

This company's trade quotations prior to 1916 were for varying times of shipment, some of them containing no shipping limitation and others being limited to shipment in varying periods. From and after 1916 all trade quotations were for shipment in 15 days.

No. 3

Practice as to Quantity Limit in Trade Quotations

This company's trade quotations prior to 1916 contain various limitations on quantity and some did not limit the quantity at all. From and after 1916 they were limited to one carload.

No. 4

Practice as to Cash Discount

Prior to 1915 this company allowed a cash discount of two cents per barrel for payment in ten days from date of invoice. In the latter part of 1915 this rate was changed to five cents per barrel and continued until the middle of 1920 when it was again changed to ten cents per barrel. The ten day period in which the discount could be taken was never changed. This company has never been strict [fol. 2582½] in enforcing the ten day period of limitation for the taking of discounts.

No. 5

Practice as to Selling Cement at a Price Including Packages

This company has followed the practice of selling cement at a price including packages since long before 1915. The only exceptions have been sales made to the Departments of the United States Government and shipments in bulk.

No. 6

Practice as to Dating of Invoices

This company has always dated its invoices the same day shipment was made.

No. 7

Practice as to Assuming Responsibility for Loss or Damage in Transit

Since long prior to 1915 this company's quotations and contracts have contained a clause exempting it from liability for loss or damage in transit.

[fol. 2583] No. 8

Practice as to Orders Entered for Shipment on a Certain Date

During 1915 this company's trade quotations contained no provisions that orders entered for shipment on a specific date would be shipped on that date unless sooner ordered out by the purchaser. This provision was contained in the quotations from the beginning of 1916 until 1920, and was abandoned on the latter date.

No. 9

Practice as to Making Specific Job Quotations in Advance of the Time Bids Are to be Opened

This company has no record of ever having declined to make specific job quotations more than ten days before the date bids were to be received. It has always been willing to quote whenever requested by a customer and that has been its custom from the beginning of its business up to the present time.

No. 10

Practice as to Time Limit for Acceptance of Specific Job Quotations

Prior to March 17th, 1916, this company's specific job quotations were for acceptance within varying periods, usually between seven

and thirty days. Beginning on that date, and until the middle of [fol. 2583½] 1917, its specific job quotations were for acceptance within either five or fifteen days from the date of the quotation, with a few cases in March and April, 1916, when quotations were for acceptance within seven days of the formal award of the contract and void within thirty days.

From the middle of 1917 to the present time, its specific job quotations have been for acceptance within five days of the formal award of the contract, or in any event within fifteen days from the date thereof, and also for acceptance within five or fifteen days, the practice having varied in this period.

No. 11

Practice as to Requiring Execution of Formal Contract After Specific Job Quotation Has Been Accepted

Prior to 1916 this company's specific job quotations did not contain a provision requiring the execution of a formal contract after the quotation was accepted.

This provision appears in the company's specific job quotations from the beginning of 1916 to the present time.

No. 12

Practice as to Requiring a Written Contract Between Dealer and Consumer Before Entering Into a Specific Job Contract with the Dealer

This Company's specific job quotations and contracts do not require that a written contract be entered into between the dealer and [fol. 2584] the consumer. The company has never made any such requirement.

No. 13

Practice as to Entering Into a Specific Job Contract with the Dealer, Before He Had Sold the Cement to the Consumer

The policy of this company has always been not to sell cement to dealers on specific job contracts before the dealer had sold the cement to its customers.

No. 14

Practice as to Declining to Enter Into Specific Job Contracts Before the Construction Work Was Ready to Proceed

This company has never declined a specific job contract because the plans for the construction work had not been drawn or because the time of the completion of the construction work had not been estimated, or because the bids or proposals for the construction work had not been asked for.

No. 15

Practice as to Minimum Quantity to be Sold Under a Specific Job Contract

This company has never made specific job contracts for less than one carload.

[fol. 2584½]

No. 16

Practice as to Permissible Variations in Quantity on Specific Job Contracts

As early as 1912 this company's specific job contracts permitted a variation of ten per cent more or less in the quantity provided for. From the beginning of 1916 to the present time its specific job contracts have been for a specified amount with not variation clause included.

No. 17

Practice as to Inserting in Specific Job Contracts a Limitation on Maximum Shipment Per Month

This company's specific job contracts have never contained a clause specifying a stated maximum amount of shipment per month. The only variation in this practice is in the case of very large contracts, when the company sometimes writes in a provision as to the maximum monthly shipment.

No. 18

Practice as to Requiring a Signed Monthly Report from the Dealer Holding a Specific Job Contract, Showing His Deliveries on the Specific Job

This company has never required a signed monthly report from [fol. 2585] the dealer showing his deliveries on a specific job, and its contracts and quotations have never contained such a clause.

For a few months in 1920 it requested New York City dealers to report their deliveries on specific jobs.

No. 19

Practice as to Making Blanket Contracts

The policy of this company has always been since long prior to 1915 not to make blanket contracts. Exceptions have occurred, however, in the years 1913, 1915, 1916 and 1920.

No. 20

Practice as to Selling Railroads

Since at least 1914 this company has sold railroads for future delivery at the dealers' price or less, and its practice is the same at the present time.

No. 21

Practice as to Selling Industrials

Since at least 1914 this company has sold industrials in the same manner as it sells other consumers: i. e., for limited shipment, either [fol. 2585½] fifteen or thirty days or for future delivery on specific work contracts. Exceptions have occurred where industrials have been sold their requirements.

No. 22

Practice as to Selling Manufacturers of Concrete Products

The practice of this company has always been to sell concrete products manufacturers at the consumers' price for shipment within fifteen or thirty days, according to the time limit in effect at the time of sale, or for future delivery on specific work contracts.

One exception appears in the year 1920 where a concrete products manufacturer was sold for future delivery.

No. 23

Practice as to the Use of an Order Blank to be Signed by the Customer

This company does not now use an order blank. Between 1916 and 1918 it used an order form which, however, was not signed by the customer.

No. 24

Practice as to a Separate Charge for Bin Tests

This company made a charge for bin tests in 1913 of six cents per [fol. 2586] barrel. The bin test does not appear in the company's contracts from that date until 1919, when a charge of three cents per barrel was made and continued until May 26, 1921, when it was finally discontinued.

No. 25

Practice as to Assuming the Expense of Commercial Laboratory Tests

This company has in every year since 1914 borne the expense of commercial laboratory tests.

No. 26

Practice as to Repurchase of Cloth Sacks

This company has always absorbed a portion of the loss on damaged and worthless sacks and has not limited its repurchase to sacks in serviceable condition.

No. 27

Practice as to Quoting Dealers for Shipment to Towns Other Than Their Home Towns

This company has always quoted dealers for shipment to towns other than their home towns.

[fol. 2586½] No. 28

Practice as to Selling at a Dealer's Price to Persons Who Do Not Comply with Following Definition

"A dealer is a merchant, firm, or corporation regularly engaged in selling Portland cement and other building materials purchased by him for resale only, who is also properly equipped with storage facilities, supplied with teams or trucks and is recognized in his home town as a building material dealer."

This company has in every year sold at the dealers' price to persons who do not comply with the above definition of a dealer.

No. 29

Practice as to a Dealer's Differential in Price

This company's differential to its dealers was five cents per barrel up to the middle of 1916. Since that time it has been ten cents per barrel.

No. 30

Practice as to Payment of Commissions to Dealers on Cement Sold Direct to Consumers

This company has in every year paid commissions to dealers on sales made direct to the consumers.

[fol. 2587] No. 31

Practice as to Giving Special Concessions to Buyers

This company has made some special concessions to buyers in almost every year since 1915.

No. 32

Practice as to Mixing Waterproofing Compounds with Cement at the Mills

This company has mixed waterproofing compounds with cement at its mill on various occasions since 1912.

No. 33

Practice as to Giving Advance Notice of Change in Price

This company has never given advance notice of price change.

No. 34

Practice as to Guaranteeing Sales for Future Delivery Against a Decline in Price

This company's contracts since April 1st, 1919, have contained a clause guaranteeing against a decline in price.

[fol. 2587½] No. 35

Practice as to Making Reports to Induce Dealers Not to Resell Below the Consumers' Price

This company has never made any effort to influence the price at which dealers would resell its cement.

No. 36

Practice as to Requiring Dealers to State in Their Bids the Name of the Brand on Which They Were Bidding

This company has never required dealers to state in their bids the name of the brand on which they were bidding.

No. 37

Practice as to Membership in Dealers' Organizations

This company since 1916 has been a member of the Master Builders Exchange of Philadelphia and since 1917 has been a member of the Mechanics & Traders Exchange of Newark, N. J.

Examined and found correct.

Emil Loeb.

[fol. 2588] DEF'TS' EX. No. D-517F

Dexter Portland Cement Company

Trade Practices Exhibit

Summary of the Files of Invoices, Correspondence and Quotations and the Ledgers and Other Documentary Evidence of Dexter Portland Cement Company Showing the Trade Practices of the Company

(NOTE.)—Prior to 1915 this company marketed its product exclusively through a sole sales agent and had no direct relations with the trade. It has, therefore, no complete record of trade practices prior to that date.

No. 1

Practice as to Time Limit for Acceptance of Trade Quotations

This company's trade quotations read for immediate orders, and are subject to change without notice. The quotation can be accepted as long as the price named is in effect. The only variation from this practice found in the records is during 1915, when quotations in many cases were limited to acceptance in seven days.

[fol. 2588½] No. 2

Practice as to Time of Shipment of Trade Orders as Specified in Quotation

This company accepts orders for shipment more than fifteen days from the date of the order at the price prevailing at time of shipment, but orders at a fixed price are only accepted for shipment within fifteen days of the date of the order. This limitation of fifteen days has been effective since February 22, 1916.

No. 3

Practice as to Quantity Limit in Trade Quotations

During 1915 this company's trade quotations were sometimes limited to one car and where not so limited contained a provision that if more than one car was ordered the shipment must be prorated. Since February, 1916, the trade quotation has contained a clause that unless otherwise agreed it is limited to one carload.

No. 4

Practice as to Cash Discount

This company allowed a cash discount to its sole sales agent from 1905 to 1907 of two per cent on the cement and one per cent on the

bags for payment in fifteen days. From January, 1907, to February, [fol. 2589] 1910, the discount rate was one per cent on the cement in package. From February, 1910, to January, 1914, the discount allowed to the sales agent was one cent a barrel. From January 14th to the termination of the contract with the sales agent on February 5, 1915, the discount rate was two cents a barrel, and this rate was discontinued during 1915 when the company commenced selling to its dealers direct. From November, 1915, until July 21, 1920, the discount was five cents a barrel. Since July 21, 1920, the discount has been ten cents a barrel.

The time within which payment must be made by the sole sales agent to permit the discount was fifteen days until February 5, 1915, and since then has been ten days, but there are a number of cases in which the discount has been allowed when payment has been made after the expiration of that time.

No. 5

Practice as to Selling Cement at a Price Including Packages

This company adopted as its usual practice charging for the cement at a price including packages as early as November, 1909. It has at all times since then sold some cement to local customers who bring their own containers to be filled, it has sold and shipped some cement in bulk without packages, and it has quoted and sold to the United States Government excluding packages.

[fol. 2589½] No. 6

Practice as to Dating of Invoices

This company has for some twenty-one years always dated invoices on the day shipment was made if practicable. The only exceptions are in the very few cases where information for billing is not available the day shipment is made, and then invoices are drawn when information is obtained.

No. 7

Practice as to Assuming Responsibility for Loss or Damage in Transit

This company's practice has been and now is to assume responsibility for loss or damage en route and on receipt of proper papers it has sent a credit memorandum to the customer for the amount of such damage. The only exception was on a few orders from March, 1916, to July, 1916, when a clause limiting the company's liability was inserted in a portion of the orders taken during this time.

No. 8

Practice as to Orders Entered for Shipment on a Certain Date

This company has inserted in all of its quotations and contracts since it began to sell to dealers direct in 1915 a clause to the effect that orders entered for shipment on a specific date would be shipped [fol. 2590] on that date unless sooner ordered out by the purchaser. While the clause has been formally inserted, it has never been enforced and the delivery date has uniformly been extended on request, subject in a few cases to the provision that where there has been a change in price subsequent to the specified delivery date the cement is delivered at the new price. But the usual practice has been even in such cases to grant the extension at the original price.

No. 9

Practice as to Making Specific Job Quotations in Advance of the Time Bids are to be Opened

This company on March 1st, 1915, established the practice that quotations should only be made when bids were to be opened within ten days. On April 3, 1915, this time limit was extended to thirty days. On April 12, 1916, the time limit as to the date bids were to be received was abolished and since then there has been no limitation as to the date when bids were to be received on the making of specific job quotations.

No. 10

Practice as to Time Limit for Acceptance of Specific Job Quotations

During 1915 this company's specific job quotations were limited [fol. 2590½] for acceptance within a time specified, usually running from six to thirty days from the date of the quotation. Since March 16, 1916, they are limited to acceptance within five days of the formal award of the contract and also to within fifteen days from the date of the quotation.

No. 11

Practice as to Requiring Execution of Formal Contract After Specific Job Quotation Has Been Accepted

During 1915 this company did not require the execution of a regular form of contract other than the acceptance of the specific job quotation. During 1916 it gradually changed to the practice of requiring the execution of a regular form of contract and since the latter part of that year this course has been generally followed. There are a number of cases after 1916, in which the accepted quotation was the only contract.

No. 12

Practice as to Requiring a Written Contract Between Dealer and Consumer Before Entering Into a Specific Job Contract With the Dealer

This company's quotation sheets now require that a written contract be entered into between the dealer and the contractor, but the [fol. 2591] specific work contract does not contain such a clause and it has never been insisted upon. At all times whenever the company has entered into specific work contracts it has endeavored to have the dealer enter into a contract with the contractor. The earliest record of this is February 16, 1915, when the company first commenced selling direct. On May 12th, 1916, salemen were advised that they must insist upon the dealer filing a copy of his contract with the contractor, but one week later, on May 19th, 1916, this requirement was rescinded and has not since been enforced.

No. 13

Practice as to Entering Into a Specific Job Contract With the Dealer, Before He Has Sold the Cement to the Consumer

This company has always sought to limit its sales on specific job contracts to the dealer to cases where the dealer had a contract for resale.

No. 14

Practice as to Declining to Enter Into Specific Job Contracts Before the Construction Work Was Ready to Proceed

This company's practice since 1915 has been consistent that firm quotations would not be issued for work merely contemplated, and [fol. 2591½] that every specific job contract must have a definite expiration date; and the company has been unwilling to enter into a specific job contract until after the general contract for the construction work has been awarded.

No. 15

Practice as to Minimum Quantity to be Sold Under a Specific Job Contract

This company has occasionally made specific job contracts for less than one carload, although it is very seldom that any one wishes to make a specific contract for so small a quantity.

No. 16

Practice as to Permissible Variations in Quantity on Specific Job Contracts

During most of 1915 this company's specific job contracts permitted a variation from the estimated quantity of 20 per cent; during

the latter part of 1915 and until May 5th, 1916, the allowable variation was in some cases 10 per cent, and in others 20 per cent; since May 5, 1916, this company's contracts have been for all cement required on the job, with no limit as to amount.

[fol. 2592] No. 17

Practice as to Inserting in Specific Job Contracts a Limitation on Maximum Shipment Per Month

This company's printed contract forms have always contained a clause for a stated maximum amount of shipment per month on specific job contracts; but ordinarily the clause is not filled in in the contract, the company's practice being only to insert such a limitation in large contracts where there might be difficulty in filling the shipment.

No. 18

Practice as to Requiring a Signed Monthly Report From the Dealer Holding a Specific Job Contract, Showing His Deliveries on the Specific Job

Since this company commenced selling, in February, 1915, its specific job contracts have always contained a clause requiring the purchaser to give satisfactory evidence that the cement was being used on the work specified in the contract. Except in unusual cases the company has not required such a statement except for one week in May, 1916.

[fol. 2592½] No. 19

Practice as to Making Blanket Contracts

This company has always avoided making blanket contracts, and in the period from 1905 to 1914, inclusive, was constantly quarreling with its sole sales agent over this question.

No. 20

Practice as to Selling Railroads

This company's practice with respect to this class of customers has not been uniform or consistent. At times it has quoted and sold railroads yearly requirements at a fixed price; at other times it has sold on fifteen-day delivery and on specific work contracts; and at others it has offered to make contracts for annual requirements at the market price at the time of shipment. From 1915 until early in 1921 railroads were sold both at the dealers' and consumers' price; since early in 1921 they have been sold at the dealers' price.

No. 21

Practice as to Selling Industrials

This company's practice with respect to this class of customers has not been uniform or consistent. At times it has quoted and sold industrials yearly requirements at a fixed price; at other times it has [fol. 2593] sold on fifteen-day delivery and on specific work contracts; and at others it has offered to make contracts for annual requirements at the market price at the time of shipment. This class of customers has generally been sold through dealers.

No. 22

Practice as to Selling Manufacturers of Concrete Products

This company sells at the dealers' price to concrete products manufacturers who are dealers as well as manufacturers. It sells concrete products plants and concrete block plants either (1) on shipment within fifteen days, or (2) for future delivery for specific work for a stated amount, where a definite sale has been consummated by such plants.

In 1915 it would not sell to concrete block manufacturers for delivery more than thirty days from the date of the order.

No. 23

Practice as to the Use of an Order Blank to be Signed by the Customer

This company has used an order form that can be signed by the customer since February, 1915, but it is not ordinarily signed by the customer.

[fol. 2593½] No. 24

Practice as to a Separate Charge for Bin Tests

This company's practice as to bin tests and separate charges therefor has varied. During 1915 it made a bin test charge of six cents a barrel; from 1916 to 1919 it made a charge of three cents a barrel; in 1920 no cement was held in the bins for testing and no charge was made for bin tests; and since then there has been no charge made for bin tests.

No. 25

Practice as to Assuming the Expense of Commercial Laboratory Tests

This company has never borne the expense of commercial laboratory tests since it commenced business.

No. 26

Practice as to Repurchase of Cloth Sacks

This company has always stipulated in its terms of sale that it would only repurchase cloth sacks that were in serviceable condition. There has been no change in its practice in this regard from that which prevailed during the time it was selling its cement en- [fol. 2594] tirely through a sales agent prior to 1915. In actual practice it refuses credit for bags that have been wet or otherwise abused, but it allows credit for sacks which are unserviceable through continued wear.

No. 27

Practice as to Quoting Dealers for Shipment to Towns other than their Home Towns

This company has made quotations and sales to dealers for delivery not in their home towns.

No. 28

Practice as to Selling at the Dealers' Price to Persons who do Not Comply with Following Definition

"A dealer is a merchant, firm, or corporation regularly engaged in selling Portland cement and other building materials purchased by him for resale only, who is also properly equipped with storage facilities, supplied with teams or trucks and is recognized in his home town as a building material dealer."

This company has never observed this definition in quoting the dealers' price, and a large percentage of the customers of this com- [fol. 2594½] pany who receive the dealers' price do not comply with the definition. Since February 23d, 1915, this company has applied its own definition of a dealer as follows:

"Unless party is a bona fide dealer carrying cement in stock for resale and not engaged in any manufacturing enterprise or other business involving the use of cement, do not quote dealers' price."

No. 29

Practice as to a Dealer's Differential in Price

From the beginning of 1915 until May 12, 1916, this company allowed a dealer's differential of five cents a barrel; from May 12, 1916, to May 19, 1916, it allowed a differential of ten cents a barrel; from May 19, 1916, to December 8, 1916, it allowed a differential of five cents and ten cents at different times and different places; since December, 1916, the differential has usually been ten cents a barrel.

No. 30

Practice as to Payment of Commissions to Dealers on Cement Sold Direct to Consumers

This company has avoided paying a commission to dealers whenever it could, but has occasionally paid such commission.

[fol. 2595]

No. 31

Practice as to Giving Special Concessions to Buyers

This company does not make special concessions to buyers. It has always adhered to the policy of one price.

No. 32

Practice as to Mixing Waterproofing Compounds with Cement at the Mills

This company has never mixed waterproofing compounds with cement at its mills.

No. 33

Practice as to Giving Advance Notice of Change in Price

This company has never given advance notice of price change.

No. 34

Practice as to Guaranteeing Sales for Future Delivery Against a Decline in Price

Since 1919 many of this company's contracts have contained a clause protecting against a decline in price. Prior to that time its [fol. 2595½] contracts did not contain such a clause.

No. 35

Practice as to Making Efforts to Induce Dealers not to Resell Below the Consumers' Price

This company in May, 1916, directed its salesmen to discourage dealers from selling on a smaller margin of profit than ten cents, and on March 23rd, 1917, advised their salesmen that they should not sell to dealers who were reselling at less than the consumers' price. The notice was found ineffective, however, and since the middle of 1917 the company has made no attempt to interfere with the resale price of cement by dealers, even in cases where it knew that the dealer was reselling below the company's established consumers' price.

No. 36

Practice as to Requiring Dealers to State in Their Bids the Name of the Brand on Which They Were Bidding

This company, to insure the sale of its cement rather than that of a competitor, would like to have dealers specify their brand in bidding on contract, and its salesmen have from time to time requested dealers to do this, but their efforts have not been successful and they [fol. 2596] have never made any attempt to require compliance from the dealer.

No. 37

Practice as to Membership in Dealers' Organizations

This company is not now a member of any dealers' organization. From the beginning of 1915 to March, 1918, it was a member of certain dealers' organizations.

Examined and found correct.

T. H. Yeisley.

[fol. 2593½] DEF'TS' EX. NO. D-517 G

Edison Portland Cement Company

Trade Practices Exhibit

Summary of the Files of Invoices, Correspondence and Quotations and the Ledgers and Other Documentary Evidence of Edison Portland Cement Company Showing the Trade Practices of the Company

NOTE.—This company was shut down and did not attempt to sell cement from 1914 until the spring of 1916. It has no records of any trade practices prior to the spring of 1916, since such records as the company had in 1914 and prior thereto have been destroyed.

No. 1

Practice as to Time Limit for Acceptance of Trade Quotations

This company's trade quotations since the spring of 1916, when it resumed selling activities, were for immediate acceptance. This practice has continued up to the present time. Exceptions, however, [fol. 2597] have occurred where the company has quoted by letter, and such quotations have been for acceptance within varying periods up to fifteen days.

No. 2

Practice as to Time of Shipment of Trade Orders as Specified in Quotation

Since 1916 this company's trade quotations have been for shipment within fifteen days from date of order, with the exception of cases where quotations have been made by letter, and then the shipment provision has been for varying periods.

No. 3

Practice as to Quantity Limit in Trade Quotations

Since 1916 this company's trade quotations have been limited to one carload, with the exception of such cases in which the company has quoted by letter, and then the quantity limitation has been for varying amounts.

No. 4

Practice as to Cash Discount

Since 1916 and up to 1920 this company's cash discounts have been five cents per barrel for payment within ten days from the date [fol. 2597½] of the invoice. Beginning in the summer of 1920 the cash discount was increased to ten cents per barrel, with the same period concerning payment.

This company has never strictly adhered to the provision that discounts would be allowed only upon payment within ten days from the date of invoice, but has frequently allowed the discount to be taken, even when invoices were paid beyond the ten-day period.

No. 5

Practice as to Selling Cement at a Price Including Packages

This company since it resumed selling activities in the spring of 1916 sells its cement at a price including the package. Its only deviation from that practice has been sales to or on account of the United States Navy and sales in bulk.

No. 6

Practice as to Dating of Invoices

This company's practice has always been to date invoices on the day shipment is made. There have been numerous variations, however, in which invoices have been dated other than on the day on which shipment has been made.

[fol. 2598] No. 7

Practice as to Assuming Responsibility for Loss or Damage in Transit

In the spring of 1916 when this company resumed selling activities its contracts did not contain a clause relieving it from liability for loss or damage in transit. Beginning in the early part of 1917 its contracts provided that the company would not be responsible for loss or damage in transit, and this latter clause has appeared in the company's contracts since that date up to the present time. The company has not always observed this clause, but has in fact made allowances for loss or damage in transit on numerous occasions.

No. 8

Practice as to Orders Entered for Shipment on a Certain Date

This company's quotations since the time it resumed selling in the spring of 1916 have contained the clause that orders entered for shipment on a specific date would be shipped on that date unless sooner ordered out by the purchaser. It has, however, not insisted on this and has on various occasions extended the time of shipment.

[fol. 2598½] No. 9

Practice as to Making Specific Job Quotations in Advance of the Time Bids are to be Opened

This company has always made quotations on specific jobs when asked for, without regard to the time when bids are to be opened.

No. 10

Practice as to Time Limit for Acceptance of Specific Job Quotations

This Company's specific job quotations since the spring of 1916 have been for acceptance in varying periods from three to nineteen days.

No. 11

Practice as to Requiring Execution of Formal Contract After Specific Job Quotation Has Been Accepted

This company has never insisted upon the execution of a regular form of specific job contract after the specific job quotation has been accepted. Its practice has been, since it resumed business in 1916, to send a contract to the customer, but it has never insisted upon its execution. It has also taken orders for specific jobs on the customer's form of contract.

[fol. 2599]

No. 12

Practice as to Requiring a Written Contract Between Dealer and Consumer Before Entering into a Specific Job Contract with the Dealer

This company has never required that a written contract be executed between the dealer and the consumer before entering into a specific job contract with the dealer.

No. 13

Practice as to Entering into a Specific Job Contract With the Dealer Before he Had Sold the Cement to the Consumer

This company has never knowingly entered into a specific job contract with a dealer before the dealer had sold the cement to his customer.

No. 14

Practice as to Declining to Enter into Specific Job Contracts Before the Construction Work was Ready to Proceed

This company has never declined to enter into specific job contracts because the construction plans had not been drawn, or because the time of the completion of the construction work had not been [fol. 2599½] estimated, or because bids or proposals for the construction work had not been asked for.

No. 15

Practice as to Minimum Quantity to be Sold Under a Specific Job Contract

This company has never made, as far as its records show, a specific job contract for less than one carload and has never been asked to do so.

No. 16

Practice as to Permissible Variations in Quantity on Specific Job Contracts

This company's specific job contracts since 1916, when it resumed operations, to the present time have always been for a stated amount or for approximately a stated amount, with no variation referred to.

No. 17

Practice as to Inserting in Specific Job Contracts a Limitation on Maximum Shipment per Month

Since the Spring of 1916 until 1920, this company's specific job contracts contained no clause limiting monthly shipments.

[fol. 2600] Beginning in the middle of 1920, a monthly limitation of shipment clause was included, but filled in only in the cases of large contracts.

No. 18

Practice as to Requiring a Signed Monthly Report from the Dealer Holding a Specific Job Contract, Showing His Deliveries on the Specific Job

This company has never required a signed monthly report from the dealer showing the deliveries on specific job contracts.

No. 19

Practice as to Making Blanket Contracts

This company has always made blanket contracts.

No. 20

Practice as to Selling Railroads

This company has always sold steam railroads direct for future delivery and for their yearly requirements, at the dealers' price.

[fol. 2600½]

No. 21

Practice as to Selling Industrials

This company has always sold industrials on annual requirement contracts at both the dealers' and consumers' price.

No. 22

Practice as to Selling Manufacturers of Concrete Products

This company has always sold concrete products manufacturers at both the consumers' and dealers' price. It has no record of ever having sold concrete products manufacturers for future delivery.

No. 23

Practice as to the Use of an Order Blank to be Signed by the Customer

This company has used an order form since it resumed operations in 1916. The blank contains a space for the purchaser's signature. In the great majority of cases, however, since 1916 and up to the present time this order blank has not been signed by the customer.

[fol. 2601]

No. 24

Practice as to a Separate Charge for Bin Tests

This company's contracts have never contained a printed form referring to bin test charges. In all cases where this service was requested by the customer a bin storage charge of three cents per barrel was made, until May 21, 1921, and in such cases was typewritten on the contract. Since May 21, 1921, there has been no charge for this service.

No. 25

Practice as to Assuming the Expense of Commercial Laboratory Tests

This company has in several instances borne the expense of commercial laboratory tests. Its general policy has always been, however, not to assume such charges.

No. 26

Practice as to Purchase of Cloth Sacks

This company's quotations and contracts have always contained the clause that it would repurchase sacks returned to it in serviceable condition. It has, however, always credited some worthless sacks.

[fol. 2601½]

No. 27

Practice as to Quoting Dealers for Shipment to Towns Other Than Home Towns

This company has always when requested quoted dealers for shipment to towns other than their home towns at the dealers' price.

No. 28

Practice as to Selling at the Dealers' Price to Persons Who Do Not Comply With the Following Definition

"A dealer is a merchant, firm, or corporation regularly engaged in selling portland cement and other building materials purchased by him for resale only, who is also properly equipped with storage facilities, supplied with teams or trucks and is recognized in his home town as a building material dealer."

This company has at various times sold at the dealers' price to persons who do not comply with the definition of a dealer.

[fol. 2602]

No. 29

Practice as to a Dealer's Differential in Price

From the spring of 1916 until June 1, 1920, this company had no established differential. Between those dates the differential varied between two or three cents a barrel to as high as twenty-five cents a barrel, depending upon the dealer and his location.

On June 1, 1920, the company established a dealer's differential of ten per cent., which remained in effect until June 26, 1921.

On the latter date the company reverted to its old practice of having no established differential.

No. 30

Practice as to Payment of Commissions to Dealers on Cement Sold Direct to Consumers

This company has since it resumed activities paid on various occasions commissions to dealers on sales made direct to others.

No. 31

Practice as to Giving Special Concessions to Buyers

This company has in very year given special concessions to buyers.

[fol. 2602½]

No. 32

Practice as to Mixing Waterproofing Compounds with Cement at the Mills

This company has no record of ever having mixed waterproofing compounds with cement at its mills.

No. 33

Practice as to Giving Advance Notice of Change in Price

This company has frequently given advance notice of a change in price.

No. 34

Pra-tice as to Guaranteeing Sales for Future Delivery Against a Decline in Price

From early in 1916 when the company resumed operations until the beginning of 1921 this company's contracts did not contain a clause guaranteeing prices against decline although there may have been a few contracts in which the clause appeared. Beginning in February, 1921, this company's contracts have always contained this guaranty clause.

[fol. 2603]

No. 35

Practice as to Making Efforts to Induce Dealers Not to Resell Below the Consumers' Price

This company has never made any effort to induce dealers not to resell below the consumers' price.

No. 36

Practice as to Requiring Dealers to State in Their Bids the Name of the Brand on Which They Were Bidding

This company has never required dealers to state in their bids the brand of cement on which they are bidding.

No. 37

Practice as to Membership in Dealers' Organizations

This company has never been a member of any dealers' organization.

Examined and found correct.

Frank A. Sweeney, Edison Portland Cement Co.

[fol. 2603½]

DEF'TS' EX. No. D-517H

Giant Portland Cement Company

Trade Practices Exhibit

Summary of the Files of Invoices, Correspondence and Quotations and the Ledgers and Other Documentary Evidence of Giant Portland Cement Company Showing the Trade Practices of the Company

No. 1

Practice as to Time Limit for Acceptance of Trade Quotations

From 1913 to 1916 this company's trade quotations were limited for acceptance in terms varying from five to fifteen days. From February, 1916, to October, 1920, they were limited to immediate orders only. Since October, 1920, there has been no express limitation on the time of acceptance, but they have been subject to change in price without notice.

No. 2

[fol. 2604] Practice as to Time of Shipment of Trade Orders as Specified in Quotation

Begining 1913 this company's trade quotations were usually for shipment within thirty days of the date of the quotation. Since February, 1916, they have been for shipment within fifteen days from the date of the order.

No. 3

Practice as to Quantity Limit in Trade Quotations

From 1913 to 1916 this company's trade quotations were limited to a quantity named in each quotation, usually varying from 300 to 1,000 barrels. Since 1916 they have been limited to one carload unless otherwise agreed.

No. 4

Practice as to Cash Discount

This company allowed a cash discount for payment within ten days of the date of invoice as follows:

1913, 1 cent a barrel.
1914 to November 11th, 1915, 2 cents a barrel.
November, 1915, to October, 1920, 5 cents a barrel.
November, 1920, to date, 10 cents a barrel.

[fol. 2604½] While the discount has been in terms limited to payment in ten days, the company in practice has allowed discounts on payments made after the ten day period.

No. 5

Practice as to Selling Cement at a Price Including Packages

Since 1913 it has been the usual practice of this company to quote and sell cement at a price including packages. It has quoted and sold exclusive of packages to the United States Government, and it has made some sales of cement in bulk.

No. 6

Practice as to Dating of Invoices

Since 1913 it has been the consistent practice of this company to date invoices as of the date of shipment. The only exceptions have been unusual shipping conditions, making it impossible to obtain the contents of the car until after it had been delivered and unloaded.

No. 7

Practice as to Assuming Responsibility for Loss or Damage in Transit

This company's contracts and quotations since 1913 have always contained a clause disclaiming liability for loss or damage in transit.

[fol. 2605]

No. 8

Practice as to Orders Entered for Shipment on a Certain Date

Since May, 1916, this company's trade quotations have contained a clause that orders entered for shipment on a specific date would be shipped on that date unless sooner ordered out by the purchaser. The company has not in practice ever enforced this requirement.

No. 9

Practice as to Making Specific Job Quotations in Advance of the Time Bids are to be Opened

This company has never limited the time of making specific job quotations with reference to the date that bids are to be received.

No. 10

Practice as to Time Limit for Acceptance of Specific Job Quotations

From 1913 to 1916 quotations for specific job contracts were limited for acceptance to a special time in each quotation, varying from ten days to thirty days. From March, 1916, to December, 1916, the quotations were limited for acceptance within five days of formal [fol. 2605½] award of contract, and in any event within thirty days from the date of the quotation. From December, 1916 to October, 1920, the quotations were limited as follows: "This quotation is for acceptance within five days from this date, but is void if not accepted within fifteen days of date hereof."

Since October, 1920, they have been limited for acceptance to times varying in the individual quotations.

No. 11

Practice as to Requiring Execution of Formal Contract After Specific Job Quotation Has Been Accepted

This company has always required the execution of a formal contract after a specific job quotation has been accepted. This requirement has been expressed in the specific job quotations since March, 1916, but was not so contained before that date.

No. 12

Practice as to Requiring a Written Contract Between Dealer and Consumer before Entering into a Specific Job Contract with the Dealer

In March, 1916, this company inserted in its specific job quotations a requirement that the dealer must execute a written contract [fol. 2606] with his customer on the regular form furnished by the company, and the original or duplicate of such contract filed with the company. This requirement was abandoned in December, 1916, and has not since appeared in the company's quotations. During the few months that it appeared in the company's quotations it was not in practice enforced.

No. 13

Practice as to Entering into a Specific Job Contract with the Dealer Before He Had Sold the Cement to the Consumer

Since this company began business in May, 1913, it has not to its knowledge sold cement to dealers on specific job sales contracts before the dealer had sold the cement to his customer.

No. 14

Practice as to Declining to Enter into Specific Job Contracts Before the Construction Work was Ready to Proceed

This company has never declined to enter into specific job contracts because the construction work was not ready to proceed, nor because the bids or proposals for the construction work had not been asked for.

[fol. 2606½]

No. 15

Practice as to Minimum Quantity To Be Sold under a Specific Job Contract

This company has never made specific job contracts for less than one car load. The only exceptions have been rare instances in which dealers have consolidated their orders so as to make a carload shipment from the mill.

No. 16

Practice as to Permissible Variations in Quantity on Specific Job Contracts

From 1913 to March, 1916, this company's quotations and contracts for specific work were usually for an amount not to exceed a specified quantity. Sometimes this quantity was stated as approximately or as estimated, and sometimes there was a permissible varia-

tion of fifteen per cent allowed. Since March, 1916, the specific job quotations and contracts have been for the entire and actual quantity needed for the work estimated at a stipulated amount, but in any event not to exceed 110 per cent of the estimated quantity.

No. 17

Practice as to Inserting in Specific Job Contracts a Limitation on Maximum Shipment per Month

This company's formal specific job contracts have always contained a provision limiting the maximum shipments that can be called for per month.

[fol. 2607]

No. 18

Practice as to Requiring a Signed Monthly Report from the Dealer Holding a Specific Job Contract, Showing his Deliveries on the Specific Job

This company has never required a signed monthly statement from a dealer showing his deliveries on a specific job. Its contracts, however, contain a clause that at the company's option a report may be called for.

No. 19

Practice as to Making Blanket Contracts

This company has always made blanket contracts, and its practice in this regard has not changed since 1913.

No. 20

Practice as to Selling Railroads

Since 1913 this company has entered into requirements yearly contracts with railroads, selling them at the dealers' price.

[fol. 2607½]

No. 21

Practice as to Selling Industrials

This company since it began business in 1913 has always made blanket requirement contracts with industrials covering their requirements for the year, and selling them at the consumers' price. The same practice has always been followed as to Electric Lines.

No. 22

Practice as to Selling Manufacturers of Concrete Products

During 1913 and 1914 this company sold to concrete products manufacturers for future delivery at the dealers' price. Beginning

in 1915 concrete products manufacturers were sold for future delivery for specified work only and at the dealers' price if they were dealers, otherwise at consumers' price.

No. 23

Practice as to the Use of an Order Blank to be Signed by the Customer

Since 1913 this company has had a form of order to be signed by the salesman and the purchaser. In practice this form has seldom been used, and the orders taken by salesmen are seldom, if ever, [fol. 2608] signed by the customer, and are usually sent in by the salesmen on postal cards or any other informal method.

No. 24

Practice as to a Separate Charge for Bin Tests

This company made a separate charge for bin tested cement at three cents a barrel from 1913 to May, 1921. It has made no charge for such service since the latter date.

No. 25

Practice as to Assuming the Expense of Commercial Laboratory Tests

This company regularly bears the expense of commercial laboratory tests.

No. 26

Practice as to Repurchase of Cloth Sacks

While this company's contracts and terms of sale have always provided that they would only repurchase sacks from the original purchaser and those which were in serviceable condition, in practice this company frequently buys sacks from other parties than the original purchasers and allows credit for large numbers of worthless sacks.

[fol. 2608½] No. 27

Practice as to Quoting Dealers for Shipment to Towns Other Than Their Home Towns

This company regularly quotes to dealers for shipments to towns other than their home towns, in cases where it has no dealer in the town of delivery handling the company's cement. There has been no change in the company's practice in this regard since 1914.

No. 28

Practice as to Selling at a Dealer's Price to Persons Who do Not Comply with Following Definition

"A dealer is a merchant, firm or corporation regularly engaged in selling Portland cement and other building materials purchased by him for resale only, who is also properly equipped with storage facilities, supplied with teams or trucks and is recognized in his home town as a building material dealer."

This company has always quoted and sold at the dealers' price to many persons who do not comply with the above definition.

[fol. 2609]

No. 29

Practice as to a Dealer's Differential in Price

From May 1st, 1913, to December 7th, 1916, this company allowed a dealer's differential of five cents a barrel. Since December 7th, 1916, it has allowed a differential of ten cents a barrel.

No. 30

Practice as to Payment of Commissions to Dealers on Cement Sold Direct to Consumers

This company has always paid commissions to dealers on sales made direct to consumers, and in the last few years such commissions have been on a substantial amount of its business. The percentage of its barrelage on which such commissions have been paid is as follows:

1916	1.6 per cent.
1917	3.2 per cent.
1918	4.1 per cent.
1919	6.5 per cent.
1920	14.1 per cent.
1921	14.5 per cent.

[fol. 2609½]

No. 31

Practice as to Giving Special Concessions to Buyers

This company has no record of ever having made any special concessions to buyers.

No. 32

Practice as to Mixing Waterproofing Compounds with Cement at the Mills

This company has never mixed waterproofing compounds with cement at the mills.

No. 33

Practice as to Giving Advance Notice of Change in Price

This company has never given advance notice of price change.

No. 34

Practice as to Guaranteeing Sales for Future Delivery Against a Decline in Price

From 1913 to May 4, 1919, this company did not guarantee sales [fol. 2610] against a decline in price. From May 5, 1919, to April 17, 1920, its contracts contained the decline clause. From April 17, 1920, to October 29, 1920, no such clause was included. Beginning October 29, 1920, and until the present time the clause is in the company's contracts.

No. 35

Practice as to Making Efforts to Induce Dealers Not to Resell Below the Consumer's Price

This company has no record of ever having made any effort to induce dealers not to sell below the consumers' price or of in any way attempting to influence the price charged by dealers.

No. 36

Practice as to Requiring Dealers to State in Their Bids the Name of the Brand on Which They Were Bidding

This company has never required dealers to state in their bids the name of the brand on which they are bidding.

No. 37

Pr-ctice as to Membership in Dealers' Organizations

This company has never been a member of any dealers' organization.

Examined and found correct, 4-15-22.

Alfred H. Neitbammey

[fol. 2610½] DEF'TS' EX. No. D-5171

Glens Falls Portland Cement Company,

Trades Practices Exhibit

Summary of the Files of Invoices, Correspondence and Quotations and the Ledger and Other Documentary Evidence of Glens Falls Portland Cement Company, Showing the Trade Practices of the Company

No. 1

Practice as to Time Limit for Acceptance of Trade Quotations

The trade quotations of this company in 1909 and 1910 were for acceptance within fifteen days; in 1911 and 1912 they were for acceptance within six days; in 1913 they were for acceptance in thirty days; in 1914 and 1915 they were for acceptance within six days; beginning with 1916 they have been for immediate acceptance.

[fol. 2611]

No. 2

Practice as to Time of Shipment of Trade Orders as Specified in Quotations

In 1909 and 1910 this company's trade quotations were limited to shipment within thirty days after date of acceptance; from 1911 to the end of 1915 shipment was limited to thirty days from the date of quotation; since the beginning of 1916 shipment has been in terms limited to fifteen days from the date of the order.

No. 3

Practice as to Quantity Limit in Trade Quotations

From 1909 to 1913 inclusive this company's trade quotations were limited to a specific quantity, usually specified at one or two cars; during 1914 and 1915 they were limited in quantity to two carloads unless otherwise agreed upon; since 1915 its quotations have been limited to one carload unless otherwise agreed.

No. 4

Practice as to Cash Discount

In 1912 and 1913 this company allowed a cash discount of one cent a barrel for payment within ten days of date of invoice; in 1914 [fol. 2611½] and until November 15th, 1915, a cash discount of two cents a barrel; from November 15th, 1915, to October 1st, 1920, five cents a barrel; and since October 1st, 1920, ten cents a barrel. The company has never strictly limited the allowance of discount for pay-

ment within ten days, and frequently allows a discount on payments running considerably over that time.

No. 5

Practice as to Selling Cement at a Price Including Packages

This company adopted as its usual practice charging for the cement a price including the package, at least as early as 1907. Its only deviations from that practice have been sales to or on account of the United States Government and one sale in bulk in carload lots in 1921.

No. 6

Practice as to Dating of Invoices

This company has never dated an invoice other than on the day shipment was made, as far back as its records go.

[fol. 2612]

No. 7

Practice as to Assuming Responsibility for Loss or Damage in Transit

This company's quotations and contracts admit and assume responsibility for loss or damage en route when a customer makes a claim therefor supported by proper documents. This has been its consistent practice for many years.

No. 8

Practice as to Orders Entered for Shipment on a Certain Date

Since the beginning of 1916 this company's quotations have contained a clause that orders entered for shipment on a specific date would at its option be shipped on that date unless sooner ordered out by purchaser. In practice, however, shipment has always been deferred on the request of the customer.

No. 9

Practice as to Making Specific Job Quotations in Advance of the Time Bids are to be Opened

This company has always made quotations on specific jobs when asked for, without regard to the time when bids are to be opened.

[fol. 2612½]

No. 10

Practice as to Time Limit for Acceptance of Specific Job Quotations

From 1913 to 1916 this company's specific job quotations were limited for acceptance within a time specified in each quotation,

varying from immediate acceptance to thirty days; since September, 1916, they have been limited for acceptance within fifteen days from the date of the quotation.

No. 11

Practice as to Requiring Execution for Formal Contract after Specific Job Quotation has been Accepted

From 1913 until September, 1916, the company's specific job quotations contained a blank form of acceptance at the foot thereof, and this when signed by the customer constituted the contract. Since September, 1916, the company's specific job quotations have contained a clause requiring the execution of a regular form of specific work sales contract; but the company has not uniformly enforced this requirement.

[fo. 2613]

No. 12

Practice as to Requiring a Written Contract Between Dealer and Consumer before Entering Into a Specific Job Contract with the Dealer

This company has never required that a written contract be entered into between the dealer and consumer, before it will enter into a specific job contract with the dealer.

No. 13

Practice as to Entering into a Specific Job Contract with the Dealer, before He Had Sold the Cement to the Consumer

This company has never questioned the dealer as to whether he had closed a contract with the contractor. It has always been its practice to accept a contract from the dealer without question.

No. 14

Practice as to Declining to Enter into Specific Job Contracts before the Construction Work was Ready to Proceed

This company has never declined to make a specific job contract because of the time of completion of the construction work had not [fol. 2613½] been estimated or because the plan for the construction work had not been drawn or because the bids or proposals for the construction work had not been asked for.

No. 15

Practice as to Minimum Quantity to be Sold Under a Specific Job Contract

This company has never made a specific job contract for less than one carload; and its practice in that regard has not changed since 1912.

No. 16

Practice as to Permissible Variations in Quantity on Specific Job Contracts

From 1913 to 1916 this company's specific job contracts were ordinarily for a specific quantity, with no provision for variation, but sometimes providing merely a maximum. Since the fall of 1916 the specific job contracts have been for "approximately" a named number of barrels, with no other provision for variation.

[fol. 2614]

No. 17

Practice as to Inserting in Specific Job Contracts a Limitation on Maximum Shipment per Month

Since at least as early as 1912 this company's specific job contracts have always contained a provision as to a stated maximum amount of shipment per month that could be called for under the contract.

No. 18

Practice as to Requiring a Signed Monthly Report from the Dealer Holding a Specific Job Contract, Showing his Deliveries on the Specific Job

This company has never required a signed monthly report from the dealer showing the deliveries on a specific job. Its contracts, however, contain a clause that such a report may be called for.

No. 19

Practice as to Making Blanket Contracts

This company has always made blanket contracts in every year since 1914.

[fol. 2614½]

No. 20

Practice as to Selling Railroads

This company's practice has been to sell railroads their yearly requirements at consumers' prices up to 1918, at which time the War Service Committee made the price to the railroads the dealers' price, and on which basis the company has sold them since that time.

No. 21

Practice as to Selling Industrials

This company has sold some industrials their yearly requirements, on contract at dealers' prices, and some at consumers' prices. It has

also sold some industrials at dealers' prices, and some at consumers' prices, on the 15 day basis.

No. 22

Practice as to Selling Manufacturers of Concrete Products

This company usually sells manufacturers of concrete products at the consumer's price for fifteen days delivery, but it sometimes sells such manufacturers blanket contracts at the dealer's price.

[fol. 2615]

No. 23

Practice as to the Use of an Order Blank to be Signed by the Customer

This company has used the same form of order blank since prior to 1913. It is signed by the salesman but not signed by the customer.

No. 24

Practice as to a Separate Charge for Bin Tests

From 1910 to 1916 this company made no charge for bin tests; from 1916 to May, 1921, it usually made a charge for bin tests of three cents a barrel, but sometimes during that time it made no charge, and since May, 1921, it has made no charge.

No. 25

Practice as to Assuming the Expense of Commercial Laboratory Tests

This company has never borne the expense of a commercial laboratory test unless in the case of dispute with a customer as to the quality of the cement furnished him, when a test has been made merely as a matter of settlement of the dispite.

[fol. 2615½]

No. 26

Practice as to Repurchase of Cloth Sacks

This company has never repurchased cloth sacks from its customers that were not in serviceable condition. There has been no change in its practice in this regard from that which prevailed during the years 1913 and 1914.

No. 27

Practice as to Quoting Dealers for Shipment to Towns other than Their Home Towns

This company has always quoted some dealers for shipment to towns other than their home towns at dealers' prices.

No. 28

Practice as to Selling at the Dealer's Price to Persons who do not Comply with Following Definition

"A dealer is a merchant, firm, or corporation regularly engaged in selling portland cement and other building materials purchased by him for resale only, who is also properly equipped with storage facilities, supplied with teams or trucks and is recognized in his home town as a building material dealer."

[fol. 2616] This company has never limited its sales at dealer's prices to persons conforming to the definition of a dealer quoted above.

No. 29

Practice as to a Dealer's Differential in Price

This company allowed dealers a differential in price over consumers of five cents a barrel from the fall of 1914 until January 1st, 1917. Since that time it has allowed a dealer's differential of ten cents.

No. 30

Practice as to Payment of Commissions to Dealers on Cement Sold Direct to Consumers

This company has in every year paid commissions to dealers on cement sold direct to others.

No. 31

Practice as to Giving Special Concessions to Buyers

This company has from time to time made special concessions to buyers in the way of special allowances, extended discount period, [fol. 2616½] guaranteed price, and extended time of delivery.

No. 32

Practice as to Mixing Waterproofing Compounds with Cement at the Mills

This company has never mixed waterproofing compounds with cement at the mills.

No. 33

Practice as to Giving Advance Notice of Change in Price

This company has never given advance notice of price change.

No. 34

Practice as to Guaranteeing Sales for Future Delivery Against a Decline in Price

In every year from 1910 to the present time this company has guaranteed some sales against a decline in price.

[fol. 2617]

No. 35

Practice as to Making Efforts to Induce Dealers not to Resell Before the Consumer's Price

This company has never attempted to control the price that dealers would charge on the resale of its cement.

No. 36

Practice as to Requiring Dealers to State in Their Bids the Name or the Brand on Which They Were Bidding

This company has never required dealers to state in their bids the name of the brand on which they are bidding.

No. 37

Practice as to Membership in Dealers' Organizations

This company has never been a member of any dealers' organization with the exception of an associate membership which the company held in New York State Builders Supply Association during the years 1915, 1916, 1917 and 1918.

Examined and found correct.

Loren F. Goodson.

[fol. 2617½] DEF'TS' EX. NO. D-517J

Hercules Cement Corporation.

Trade Practices Exhibit

Summary of the Files of Invoices, Correspondence and Quotations and the Ledgers and Other Documentary Evidence of Hercules Cement Corporation Showing the Trade Practices of the Company

NOTE.—This company commenced its selling activities in June, 1917, and therefore, has no trade practices or proof thereof prior to that date. It actually commenced business in the latter part of 1916, but its sales manager was not engaged until June, 1917, and no business was actually done until that date. The operation of the company between September, 1916, and June, 1917, was confined to organization and construction.

[fol. 2618] No. 1

Practice as to Time Limit for Acceptance of Trade Quotations

Since this company commenced business in 1917, its trade quotations have always read for immediate acceptance. In practice the company has always accepted orders on quotations until a later notice is sent announcing a change in price.

No. 2

Practice as to Time or Shipment of Trade Orders as Specific in Quotations

Since 1917 this company's trade quotations have always read for shipment within 15 days from the date of the order, but this limitation in the quotations has not in practice been enforced, as orders have frequently been entered for shipment at a greater time.

No. 3

Practice as to Quantity Limit in Trade Quotations

This company's trade quotations since 1917 have provided that unless otherwise agreed they were limited to one carload of cement, but this limitation in the quotation has not in practice been enforced, as orders have been entered for a greater amount.

[fol. 2618½] No. 4

Practice as to Cash Discount

This company allowed a cash discount of 5 cents per barrel from the time it commenced business in 1917 until July 16th, 1920.

Since then it has allowed a cash discount of 10 cents a barrel. The terms have always provided that the discount was only due for payment in ten days, but the company has not adhered strictly to this requirement, usually allowing discount for payment for three or four days beyond the due date.

No. 5

Parctice as to Selling Cement at a Price Including Packages

This company has no record that it has ever quoted otherwise than at a price including the packages, except sales made to the War and Navy Departments of the United States Government, which were at a price excluding packages, or where shipments were made in bulk during 1920.

No. 6

Practice as to Dating of Invoices

This company has always dated its invoices on the day shipment was made.

[fol. 2619]

No. 7

Practice as to Assuming Responsibility for Loss or Damage in Transit

This company's practice has always been, and now is, to assume responsibility for loss or damage en route, and on receipt of proper papers to send a memorandum of credit for the amount of such damage. Its contracts and quotations have been disclaimed such responsibility.

No. 8

Practice as to Orders Entered for Shipment on a Certain Date

This company's contracts of sales have never contained a clause that cement ordered for shipment on a specific date would be shipped on that date unless sooner ordered out by the customer. Its current quotations from the time it began business in 1917 until August, 1918, contained this clause when it was dropped. It has frequently changed the shipping date either earlier or later to meet the wishes of the customer.

No. 9

Practice as to Making Specific Job Quotations in Advance of the Time Bids are to be Opened

This company has no record of ever having declined to make Specific job quotations more than ten days before the date bids

[fol. 2619½] were to be received. It has always been willing to quote whenever requested by a customer and that has been its custom since the beginning of its business up to the present time.

No. 10

Practice as to Time Limit for Acceptance of Specific Job Quotations

This company's specific job quotations are limited for acceptance within a time varying in the individual case. The usual limit, however, has been fifteen days.

No. 11

Practice as to Requiring Execution of Formal Contract After Specific Job Quotation has been Accepted

This company's specific job quotations have always contained a clause that the purchaser agrees at the company's option to execute a formal contract. Its contract is usually executed by the purchaser, but in a few cases the company has not insisted upon it.

[fol. 2620]

No. 12

Practice as to Requiring a Written Contract Between Dealer and Consummer before Entering into a Specific Job Contract with the Dealer

This company's specific job quotations and contracts do not require that a written contract be entered into between the dealer and a consumer. The Company has never made any such requirement.

No. 13

Practice as to Entering into a Specific Job Contract with the Dealer, before He Had Sold the Cement to the Consumer

The policy of this company has always been not to sell cement to dealers on specific job contracts before the dealer has sold the cement to his customer.

No. 14

Practice as to Declining to Enter into Specific Job Contracts before the Construction Work was Ready to Proceed

This company has never declined a specific job contract because [fol. 2620½] the plans for the construction work had not been drawn or because the time of the completion of the construction work had not been estimated or because the bids or proposaals for the construction work had not been asked for.

No. 15

Practice as to Minimum Quantity to be Sold under a Specific Job Contract

This company has never made specific contracts for less than one carload. It has, however, made specific job contracts with a dealer for a quantity of more than one carload, distributed, however, amongst different jobs named in the contract, some of which required quantities less than one carload.

No. 16

Practice as to Permissible Variations in Quantity on Specific Job Contracts

This company's specific job quotations and contracts since it commenced business have been for a specific amount, providing, however, that in case the quantity specified is insufficient for the needs of the purchaser a reasonable additional quantity will be supplied.

[fol. 2621]

No. 17

Practice as to Inserting in Specific Job Contracts a Limitation on Maximum Shipment per Month

This company's specific job contracts have always contained a clause specifying a stated maximum amount of shipment per month.

No. 18

Practice as to Requiring a Signed Monthly Report from the Dealer Holding a Specific Job Contract, Showing His Deliveries on the Specific Job

This company has never required a signed monthly report from the dealer showing the deliveries on the specific job.

No. 19

Practice as to Making Blanket Contracts

Since this company began business in 1917 it has sold on blanket contracts.

[fol. 2621½]

No. 20

Practice as to Selling Railroads

From March, 1917, until March 14th, 1919, this company sold railroads on blanket contracts at the dealers' price f. o. b. the mill.

1579

Since that date railroads have been sold for shipment on current orders or on specific job contracts on the same basis as dealers, generally, however, giving them the mill price f. o. b. their railroad's nearest junction point.

No. 21

Practice as to Selling Industrials

Industrial plants and electric lines were sold on a blanket contract for yearly requirements at consumers' price, from March, 1917, to September 2nd, 1918. Since that time they have been sold on the same terms and conditions as any other consumer.

No. 22

Practice as to Selling Manufacturers of Concrete Products

This company has sold at the dealers' price for future delivery to concrete products manufacturers who were also dealers. It has also sold at the dealers' price to dealers who specified that the [fol. 2622] material was for the use of concrete block manufacturers. Other than these cases, no sales have been made to concrete products manufacturers.

No. 23

Practice as to the use of an Order Blank to be Signed by the Customer

This company has used an order form since it commenced business in 1917. The order form is not signed by the customer.

No. 24

Practice as to a Separate Charge for Bin Tests

This company made a charge for bin tests from the time it commenced business in 1917 until June 6th, 1921, of 3 cents a barrel. It has made no charge for that service since that date.

No. 25

Pactice as to Assuming the Expense of Commercial Laboratory Tests

This company has never borne the expense of commercial laboratory tests since it commenced business, nor has it ever been requested to do so.

[fol. 2622½]

No. 26

Practice as to Repurchase of Cloth Sacks

This company has always absorbed a portion of the loss on damaged sacks and has not limited its repurchase to sacks in serviceable condition.

No. 27

Practice as to Quoting Dealers for Shipment to Towns other than their Home Towns

This company has from time to time quoted dealers at the dealers' price for shipments to towns other than their home towns.

No. 28

Practice as to Selling at a Dealer's Price to Persons who do not Comply with Following Definition

"A dealer is a merchant, firm, or corporation regularly engaged in selling Portland cement and other building materials purchased by him for resale only, who is also properly equipped with storage facilities, supplied with teams or trucks and is recognized in his home town as a building material dealer."

[fol. 2623] This company has sold in every year to some customers as dealers who do not comply with the above definition.

No. 29

Practice as to a Dealer's Differential in Price

This company has made the dealers' price ten cents a barrel less than the consumers' price since it started business in 1917.

No. 30

Practice as to Payment of Commissions to Dealers on Cement Sold Direct to Consumers

This company has, since it started business, from time to time paid dealers' commissions on sales made direct to consumers.

No. 31

Practice as to giving Special Concessions to Buyers

This company made special concessions to buyers in 1921 and 1919.

[fol. 2623½] No. 32

Practice as to Mixing Waterproofing Compounds with Cement at the Mills

This company has never mixed waterproofing compounds with cement at its mills.

No. 33

Practice as to Giving Advance Notice of Change in Price

This company has never given advance notice of price change.

No. 34

Practice as to Guaranteeing Sales for Future Delivery against a Decline in Price

This company commenced business in 1917. Its contracts of sale did not contain a clause guaranteeing against a decline in price until April 6th, 1919. Since then its specific job quotations and contracts have contained such a clause.

[fol. 2624] No. 35

Practice as to Making Efforts to Induce Dealers not to Resell below the Consumers' Price

This company has never made any effort to influence the price at which dealers would resell its cement.

No. 36

Practice as to Requiring Dealers to State in their Bids the Name of the Brand on Which They Were Bidding

This company has never required dealers to state in their bids the name of the brand on which they are bidding.

No. 37

Practice as to Membership in Dealers' Organization

This company has never been a member of any dealers organization.

Examined and found correct.

C. R. MacCarey.

[fol. 2624½] DEF'TS' EX. No. D-517K

Knickerbocker Portland Cement Company

Trade Practices Exhibit

Summary of the Files of Invoices, Correspondence and Quotations and the Ledgers and other Documentary Evidence of Knickerbocker Portland Cement Company showing the Trade Practices of the Company

No. 1

Practice as to Time Limit for Acceptance of Trade Quotations

This compay's trade quotations from 1914 to the present time have contained varying time limits for their acceptance. In some cases the quotations have contained no limitation; in other cases they were limited to prompt acceptance; in still others they were for thirty days, fifteen days or five days acceptance. The great majority of the quotations have been without limitation as to acceptance, and that practice is in effect at the present time.

[fol. 2625]

No. 2

Practices as to Time of Shipment of Trade Orders as Specified in Quotations

Continuously up to March, 1915, this company's quotations contained no limitations as to time of shipment. Beginning in March, 1915, and up to May, 1916, the quotations contained varying limitations upon date of shipment, ranging from thirteen to thirty days. Beginning in May, 1916, and to the present time quotations went out both unlimited as to date of shipment and limited to shipment within fifteen days, the majority of the company's quotations being unlimited as to date of shipment.

No. 3

Practice as to Quantity Limit in Trade Quotations

This Company's trade quotations have never contained any limit upon the amount of cement which may be ordered under them, except where the quotation was made in response to a specific inquiry which mentioned the quantity desired.

No. 4

Practice as to Cash Discount

This company allowed a cash discount of one cent per barrel from the time it commenced business in June, 1911, until January, 1914;

[fol. 2625½] a cash discount of two cents a barrel from January, 1914, to November, 1915; of five cents a barrel from November, 1915, to September, 1920; and of ten cents a barrel since September, 1920.

The discount has always been in terms limited to payment within ten days from the date of the invoice, but the company has not strictly enforced this rule, frequently allowing the discount on payments much beyond that time.

No. 5

Practice as to Selling Cement at a Price Including Packages

This company since 1911 has always followed the practice of quoting and selling cement at a price including packages. The only exception to this has been sales to the United States Navy Department, where the sale is of the cement exclusive of the cost of the package.

No. 6

Practice as to Dating of Invoices

This company has always dated its invoices on the day that shipment is made, on cement shipped by rail; and on boat deliveries on the day that the boat finishes unloading for the individual customer.

[fol. 2626]

No. 7

Practice as to Assuming Responsibility for Loss or Damage in Transit

Since 1911 this company's contracts have always contained a clause exempting it from responsibility for shortage or damage in transit. This clause has not been strictly enforced, and the company has sometimes assumed such responsibility.

No. 8

Practice as to Orders Entered for Shipment on a Certain Date

This company has never made it a term of sale that orders entered for shipment on a specific date should be shipped on that date unless sooner ordered out by purchaser.

No. 9

Practice as to Making Specific Job Quotations in Advance of the Time Bids Are to Be Opened

This company has never limited the time as to its making specific job quotations with reference to the date bills were to be received.

It has always made a quotation on a specific job at any time requested.

[fol. 2626½] No. 10

Practice as to Time Limit for Acceptance of Specific Job Quotations

This company's practice from 1911 to date has varied all the way from quotations for specific jobs without any limitation whatsoever, down to quotations for immediate acceptance. The form of quotation for specific jobs most used by this company has been unlimited as to acceptance. It has used in some instances the words "for acceptance within five days after contract is awarded." It has also used the expression "subject to concellation on five days' notice," without any further limitation.

No. 11

Practice as to Requiring Execution of Formal Contract After Specific Job Quotation Has Been Accepted

This company has never inserted in its specific job quotations (or any other quotations) any requirement that a regular form of contract must be executed upon the acceptance of the quotation. Prior to 1919 and particularly during 1916 and 1917 this company's contracts were in the form of correspondence.

[fol. 2627] No. 12

Practice as to Requiring a Written Contract Between Dealer and Consumer Before Entering into a Specific Job Contract with the Dealer

This company has never required the execution of a written contract between the dealer and his consumer in cases where it has entered into a specific job contract with the dealer.

No. 13

Practice as to Entering into a Specific Job Contract with the Dealer Before He Had Sold the Cement to the Consumer

This company has never to its knowledge sold cement to its dealers on specific job contracts before the dealer has sold the cement to his customer.

No. 14

Practice as to Declining to Enter into Specific Job Contracts Before the Construction Work Was Ready to Proceed

This company has never declined a specific job contract because the time of completion of the construction work had not been esti-

[fol. 2627½] mated or because the plans had not been drawn or because the bids or proposals for the construction work had not been asked for.

No. 15

Practice as to Minimum Quantity to Be Sold Under a Specific Job Contract

This company has never been requested to make a specific job contract for less than one carload.

No. 16

Practice as to Permissible Variations in Quantity on Specific Job Contracts

From 1911 to September, 1920, this company's specific job contracts have provided a blank space for the insertion of a variation percentage (usually 10%, but in a few instances 15%). Since September, 1920, the specific job contract form has been for a specified amount of cement, "not to exceed — barrels," and has allowed no variance at all.

[fol. 2628] No. 17

Practice as to Inserting in Specific Job Contracts a Limitation on Maximum Shipment per Month

This company's contracts have always contained a provision for a stated maximum amount of shipment per month that could be called for.

No. 18

Practice as to Requiring a Signed Monthly Report from the Dealer Holding a Specific Job Contract, Showing His Deliveries on the Specific Job.

This company has never required monthly statements from the dealer, showing deliveries made by him on specific job contracts.

No. 19

Practice as to Making Blanket Contracts

This company has always made blanket contracts.

[fol. 2628½] No. 20

Practice as to Selling Railroads

This company has always sold to railroads for their yearly requirements at the dealers' price.

No. 21

Practice as to Selling Industrials

This company has always sold to industrial plants for their yearly requirements.

No. 22

Practice as to Selling Manufacturers of Concrete Products

This company has always sold to forms, etc., manufacturing concrete products, for future deliveries, on requirement contracts at its dealers' price.

No. 23

Practice as to the Use of an Order Blank to be Signed by the Customer

This company has used an order form to be signed by the customer since 1911, which has not substantially changed during that period. [fol. 2629] This form is seldom signed by the customer; the salesman usually attaching the customer's name.

No. 24

Practice as to Separate Charge for Bin Tests

This company has at different times from the beginning of its existence up to May 3, made a charge of three cents (or sometimes six cents) per barrel for bin test. No charge for bin test has been made since May 3, 1921.

No. 25

Practice as to Assuming Expense of Commercial Laboratory Tests

While this company has not adopted a general practice of paying charges for commercial laboratory tests, it has from time to time borne the expense of such tests.

No. 26

Practice as to Repurchase of Cloth Sacks

This company has always been liberal in its bag inspection and has since 1918 made allowance for bags which were worthless.

[fol. 2629½]

No. 27

Practice as to Quoting Dealers for Shipment to Towns Other Than Their Home Towns

This company has always been willing to quote the dealers' price to dealers for shipment to towns other than their home towns, when the company had no dealer in such other town.

No. 28

Practice as to Selling at the Dealers' Price to Persons Who Do Not Comply With Following Definition

"A dealer is a merchant, firm, or corporation regularly engaged in selling portland cement and other building materials purchased by him for resale only, who is also properly equipped with storage facilities, supplied with teams or trucks and is recognized in his home town as a building material dealer."

This company has never observed this definition in quoting the dealers' price, and many of the customers of this company have received the dealers' price although not complying with the above definition.

[fol. 2630]

No. 29

Practice as to a Dealer's Differential in Price

This company allowed a differential to a dealer over a consumer of five cents per barrel from 1911 until January, 1917. Since then it has generally allowed a differential of ten cents per barrel. In various localities, from time to time, it has varied this defferential.

No. 30

Practice as to Payment of Commissions to Dealers on Cement Sold Direct to Consumers

This company has consistently paid commissions to dealers on sales made direct to consumers.

No. 31

Practice as to Giving Special Concessions to Buyers

This company has in every year made concessions in price, both by allowing cash discount after the ten days have elapsed, and by direct concessions from its prevailing quoted price in the form of additional discounts.

[fol. 2630½] No. 32

Practice as to Mixing Waterproofing Compounds with Cement at the Mills

This company incorporated waterproofing compounds at its mills once in August, 1918, and in one other instance, in connection with the Commodore Hotel (contract entered into in 1916, work completed in 1919). This company has not been called upon to do this in any other instances.

No. 33

Practice as to Giving Advance Notice of Change in Price

This company has never given advance notice of price change.

No. 34

Practice as to Guaranteeing Sales for Future Delivery Against a Decline in Price

In 1919 this company incorporated in its contracts a clause expressly guaranteeing the price against decline. Prior to that time, contracts had contained no such clause. Since 1919 and at present, either the contracts contained such a clause or a letter was written containing such guarantee, such letter being attached to the contract.

[fol. 2631] No. 35

Practice as to Making Efforts to Induce Dealers Not to Resell Below the Consumers' Price

This company has never had a policy of making any effort to induce dealers not to resell below the consumers' price. On the contrary, in many instances it has induced its dealers to sell at less than the prevailing consumers' price. There are only three instances found in the files from 1911 to date (all during the first six months of 1917) where a suggestion has been made to the dealer that he secure the full prevailing differential.

No. 36

Practice as to Requiring Dealers to State in Their Bids the Name of the Brand on Which They Were Bidding

This company has never required dealers to state in their bids the name of the brand on which they are bidding.

No. 37

Practice as to Membership in Dealers' Organizations

This company has never been a member of any dealers' organization.

The within has been examined and found correct.

Alfred S. Jewett.

April 11, 1922.
See letter of transmittal, April 4th.

[fol. 2631½] DEF'TS' EX. NO. D-517L

The Lawrence Cement Company

Trades Practices Exhibit

Summary of the Files of Invoices, Correspondence and Quotations and the Ledgers and Other Documentary Evidence of The Lawrence Cement Company Showing the Trade Practices of the Company

No. 1

Practice as to Time Limit for Acceptance of Trade Quotations

Prior to October 24th, 1916, the period for the acceptance of this company's trade quotations varied from five days to sixteen days. On October 24th, 1916, it adopted as its general policy immediate acceptance of its trade quotations, and continued that practice during 1916, 1917, 1918 and 1919. From the beginning of 1920 to the present time some of the company's quotations have been for immediate acceptance and some contained no time limit.

[fol. 2632] No. 2

Practice as to Time of Shipment of Trade Orders as Specified in Quotation

From 1910 to 1913 this company's trade quotations were limited to shipment within thirty days after date of acceptance; in 1914 the same general practice prevailed, but there were some quotations calling for current shipment and some for immediate shipment; in 1915 the company reverted again to its thirty day shipment quotations and continued that until October 30th of that year; from October 30th, 1915, to April, 1920, it quoted for shipment within fifteen days; from 1920 to the present time its general practice has been to quote for shipment within fifteen days, although a number of its quotations did not specify any limitation as to the period of shipment.

No. 3

Practice as to Quantity Limit in Trade Quotations

Prior to October 24th, 1916, the company quoted in carload lots and limited the quantity to from 500 to 1,000 barrels; from October 24th, 1916, to date quotations have been limited to one carload, but there have been cases in each year since 1916 when this limitation has not been strictly enforced.

[fol. 2632½] No. 4

Practice as to Cash Discount

From January 14th, 1909, to August 31st, 1913, this company allowed a cash discount of one cent per barrel; from September 1st, 1913, to November 19th, 1915, the discount was two cents per barrel; on November 20th, 1915, the company quoted five cents per barrel, but the first invoice which contained this allowance was dated November 26th, 1915. A discount of ten cents per barrel was first quoted July 16th, 1920, but the first invoice making this allowance was dated July 20th, 1920. Since the time when a discount was first allowed the company's contracts have always made ten days the period within which payment must be made in order to obtain discount, but there have been instances in each year where the company has not insisted upon payment within ten days.

No. 5

Practice as to Selling Cement at a Price Including Packages

As far back as this company's records go it has always quoted and sold cement including packages. The only exception to this practice has been in the case of sales to the United States Government during the war.

[fol. 2633] No. 6

Practice as to Dating of Invoices

This company has never dated an invoice other than on the day shipment was made.

No. 7

Practice as to Assuming Responsibility for Loss or Damage in Transit

This company has never until February 15th, 1921, made it a term of its quotations or contracts that the company would not assume responsibility for loss or damage en route. Since February 15th, 1921, the company's contracts have contained such a limitation.

No. 8

Practice as to Orders Entered for Shipment on a Certain Date

This company has never made it a term of sale that orders will be shipped on the date specified unless sooner ordered out by purchaser; and it has been the company's consistent practice to grant postponement of shipping dates.

[fol. 2633½]

No. 9

Practice as to Making Specific Job Quotations in Advance of the Time Bids are to be Opened

This company has never limited the time for making specific job quotations, and has always made them whenever asked for.

No. 10

Practice at to Time Limit for Acceptance of Specific Job Quotations

Prior to 1917 the company had no uniform practice for acceptance of specific job quotations, the acceptance period varying in individual cases from eight to sixty days; and some of the quotations in 1914 contained no acceptance date. Since the beginning of 1917 the company's quotations for specific jobs have been limited to acceptance within fifteen days.

No. 11

Practice as to Requiring Execution of Formal Contract After Specific Job Quotation has been Accepted

Prior to February 10th, 1916, it was the company's practice to send contracts to be executed upon acceptance of the quotation. [fol. 2634] Since February 10th, 1916, this company's specific job quotations have provided that when accepted a contract should be drawn up by the company.

In every year since 1915 the company has protected quotations and has made sales without any formal contract or on contracts drawn on the customer's form.

No. 12

Practice as to Requiring a Written Contract Between Dealer and Consumer Before Entering into a Specific Job Contract with the Dealer

This company has never required the dealer to enter into a written contract with the consumer before entering upon a specific job contract with the dealer.

No. 13

Practice as to Entering into a Specific Job Contract with the Dealer, Before he had Sold the Cement to the Consumer

It has always been the practice of this company to accept a contract from the dealer without question as to whether or not he had previously sold to the customer.

[fol. 2634½] No. 14

Practice as to Declining to Enter into Specific Job Contracts Before the Construction Work was Ready to Proceed

This company has in every year since at least 1915 made contracts for work for which construction plans had not been drawn, or for which bids or proposals had not been asked. The company's policy has been since at least 1915, however, not to make contracts under such circumstances. The company has never refused to make a specific job contract because the time of completion of construction work had not been estimated.

No. 15

Practice as to Minimum Quantity to be Sold Under a Specific Job Contract

This company's contract as far back as its records go have provided for a minimum of one carload. Ever since 1916, however, the company has made specific job contracts for less than one carload shipments, but the aggregate amount in each contract is in all such cases more than one carload, made up of several less than carload jobs.

[fol. 2635] No. 16

Practice as to Permissible Variations in Quantity on Specific Job Contracts

Prior to 1915 this company limited the amount to be delivered on a specific job contract, in some cases to 110 per cent of the amount specified, and in other cases 115 per cent. Since 1915 the company has never limited the amount to be delivered on a specific job contract.

No. 17

Practice as to Inserting in Specific Job Contracts a Limitation on Maximum Shipment per Month

This company's specific job contracts have never specified a stated maximum amount of shipment per month.

No. 18

Practice as to Requiring a Signed Monthly Report from the Dealer Holding a Specific Job Contract, Showing His Deliveries on the Specific Job

This company has never required a signed monthly report from the dealer showing deliveries on a specific job.

[fol. 2635½] No. 19

Practice as to Making Blanket Contracts

This company has in every year since 1915 made blanket contracts.

No. 20

Practice as to Selling Railroads

From 1914 to December 21, 1918, this company's practice was to make contracts for the yearly requirements of railroads and electric lines. Since December 21, 1918, it has not been the company's practice to make requirement contracts with railroads or electric lines, although it has done so in a few cases in 1921. Prior to the War this company quoted consumers' prices to railroads and electric lines. During and since the War railroads are quoted at dealers' price and electric lines at consumers' prices.

No. 21

Practice as to Selling Industrials

This company has in every year from 1915 to December 21st, 1918, made contracts for yearly requirements of industrials; since December 21st, 1918, it has not been the company's general practice to make requirement contracts but the company has nevertheless made such contracts in certain cases.

[fol. 2636] No. 22

Practice as to Selling Manufacturers of Concrete Products

This company has always made contracts for yearly requirements with concrete products manufacturers. It has sold them at the dealers' price, but has no hard and fast rule in this respect.

No. 23

Practice as to the Use of an Order Blank to be Signed by the Customer

This company has never used a salesman's order blank.

No. 24

Practice as to Separate Charge for Bin Tests

From the middle of 1912 until about the beginning of 1915 this company made a bin test charge of six cents per barrel; from about the beginning of 1915 to May 7th, 1921, the charge was three cents per barrel; since May 7th, 1921, the bin test charge has been eliminated.

[fol. 2636½] No. 25

Practice as to Assuming Expense of Commercial Laboratory Tests

This company has in every year since June 15th, 1917, paid some commercial laboratory test charges.

No. 26

Practice as to Repurchase of Cloth Sacks

This company has always since 1914 given customers credit for worn out sacks, and has allowed either part or full credit for abused sacks. It has also at various times repurchased sacks from others than the original purchaser.

No. 27

Practice as to Quoting Dealers for Shipment to Towns Other Than Their Home Towns

This company has always in every year since 1914 quoted dealers for shipment to towns other than their home towns at dealers' prices.

[fol. 2637] No. 28

Practice as to Selling at the Dealers' Price to Persons Who Do Not Comply with Following Definition

"A dealer is a merchant, firm or corporation regularly engaged in selling portland cement and other building materials purchased by him for resale only, who is also properly equipped with storage facilities, supplied with teams or trucks and is recognized in his home town as a building material dealer."

This company has in every year sold at the dealers' price to persons who do not comply with the above definition of a dealer.

No. 29

Practice as to a Dealer's Differential in Price

From 1910, which is as far back as this company's records go, until December 12th, 1916, the company has allowed dealers a differ-

ential in price over consumers of five cents a barrel. Since December 12th, 1916, the differential has been ten cents a barrel.

[fol. 2637½] No. 30

Practice as to Payment of Commissions to Dealers on Cement Sold Direct to Consumers

This company has since 1915 allowed commissions to dealers on sales made direct to consumers.

No. 31

Practice as to Giving Special Concessions to Buyers

This company has on many occasions made special concessions to buyers.

No. 32

Practice as to Mixing Waterproofing Compounds with Cement at the Mills

Up to December, 1919, this company in every year mixed waterproofing compounds with cement at its mills. Since December, 1919, the practice has been discontinued.

No. 33

Practice as to Giving Advance Notice of Change in Price

This company has never given advance notice of price change.

[fol. 2638] No. 34

Practice as to Guaranteeing Sales for Future Delivery Against a Decline in Price

From 1912 to 1914 this company guaranteed against a decline in price; from 1915 to April, 1919, it did not guarantee against a decline in price; during 1919 it began to protect deliveries against price decline; during 1920 the company did not guarantee against price decline, but in fact met the price decline on contracts already made. On January 3rd, 1921, the company again began to protect 1921 deliveries against price decline.

No. 35

Practice as to Making Efforts to Induce Dealers Not to Resell Below The Consumers' Price

This company has never attempted to control the price that dealers would charge on the resale of its cement, although it has at times suggested that the dealer should secure a fair profit.

No. 36

Practice as to Requiring Dealers to State in Their Bids the Name of the Brand on Which They Were Bidding

This company has never required dealers to state in their bids the brand of cement on which they are bidding.

[fol. 2638½] No. 37

Practice as to Membership in Dealers' Organizations

This company has never been a member of any dealers' organization.

Examined and found correct.

R. A. Pruden.

[fol. 2639] DEF'TS' EX. NO. D-517M

Lehigh Portland Cement Company

Trade Practices Exhibit

Summary of the Files of Invoices, Correspondence and Quotations and the Ledgers and Other Documentary Evidence of Lehigh Portland Cement Company Showing the Trade Practices of the Company

No. 1

Practice as to Time Limit for Acceptance of Trade Quotations

From August, 1909, to June, 1910, this company's trade quotations were for acceptance within fifteen days; from June, 1910, to [fol. 2639½] February 23rd, 1915 (with one exception, quotations to the general trade sent out on August 19th, 1912, which were for immediate acceptance), they were for acceptance within seven days; from February 23rd, 1915, to the present time its trade quotations have been either for five days acceptance or for immediate acceptance. As a general practice during this period circular trade quotations have read for immediate acceptance and quotations to individual customers in response to inquiries have been good for five days acceptance.

No. 2

Practice as to Time of Shipment of Trade Orders as Specified in Quotations

From June, 1909, to November 5th, 1915, this company's quotations were limited to shipment within thirty days from date of order;

from November 5th, 1915, to the present time its trade quotations have been for shipment within fifteen days from the date of order.

No. 3

Practice as to Quantity Limit in Trade Quotations

Prior to the early part of 1915 this company's trade quotations did not specify any quantity limitation; from the early part of 1915 to the latter part of that year the company's general quotations to the trade contained a two-car limitation, while its trade quotations in [fol. 2640] reply to inquiries from customers during that period still contained no quantity limitation: from the latter part of 1915 to date the company's general quotations to the trade contained a one-car limitation, while its trade quotations in reply to inquiries from customers continued to contain no limitation.

No. 4

Practice as to Cash Discount

From prior to June 1st, 1909, to January 24th, 1914, this company has allowed a cash discount of one cent a barrel for payment within ten days; from January 24th, 1914, to November 13th, 1915, a cash discount of two cents a barrel; from November 13th, 1915, to July 13, 1920, a cash discount of five cents a barrel; from July 13th, 1920, to the present time a cash discount of ten cents a barrel.

This company has adhered quite strictly to the ten-day limitation, and there has been no change in its practice in that regard since long prior to 1915.

No. 5

Practice as to Selling Cement at a Price Including Packages

Since prior to 1909 this company's usual practice has been to quote cement at a price including the cost of the package. This practice has never been deviated from except in the cases of sales to the Federal Government. Prior to 1915 this company quoted prices to the Gov- [fol. 2640½] ernment in some cases exclusive of packages and in other cases inclusive of packages, but all sales made were at prices including packages.

No. 6

Practice as to Dating of Invoices

This company has since at least as far back as 1911 followed the practice of dating its invoices the day shipment is made. There has been no change in its practice in this regard.

No. 7

Practice as to Assuming Responsibility for Loss or Damage in Transit

Prior to 1915 this company's quotations and contracts made no mention concerning loss or damage to shipments en route. During 1915 and up to the present time the quotations provide that the company will not be responsible for shortage or damage occurring in transit. The company's contracts during 1915 and up to the present time provide that claims for loss or damage will not be considered unless supported by railroad agent's acknowledgment on freight bill. Since long prior to 1915 and up to the present time this company has in every year allowed its customers' claims for loss or damage in transit.

[fol. 2641] No. 8

Practice as to Orders Entered for Shipment on a Certain Date

Prior to 1915 this company's quotations contained no provision as to shipment of orders entered for shipment on a specific date. Early in 1915 they stated that time of shipment would be extended only at company's option. Early in 1916 and up to the present time they state that orders entered for shipment on a specific date would be shipped on that date unless sooner ordered out by the customers.

The salesmen's order blanks have since prior to 1915 provided that time of shipment will be extended only at company's option.

In practice the company has always shipped on the date specified in the order.

No. 9

Practice as to Making Specific Job Quotations in Advance of the Time Bids are to be Opened

This company has always made specific job quotations without knowledge of the date when bids were to be received, and frequently more than ten days before the date when bids were to be received.

[fol. 2641½] No. 10

Practice as to Time Limit for Acceptance of Specific Job Quotations

Until the middle of 1910 specific job quotations were made for acceptance in sixty days. From the middle of 1910 to May 25, 1916, the specific job quotations were made for acceptance in thirty days. Since May 25, 1916, these specific quotations have generally been limited for acceptance within fifteen days from date of quotation or five days from the date of the quotation if the construction contract had been awarded. These periods have, however, in individual cases sometimes been modified.

No. 11

Practice as to Requiring Execution of Formal Contract after Specific Job Quotation Has Been Accepted

This company customarily requires the execution of a formal specific job contract following the acceptance of a quotation therefor. This has been its practice at least as far back as 1912.

No. 12

Practice as to Requiring a Written Contract between Dealer and Consumer before Entering into a Specific Job Contract with the Dealer

This company does not require the execution of a written contract between the dealer and his customer before it will enter into a specific [fol. 2642] job contract with him, and none of its quotations contain such a requirement. It has furnished dealers with forms of contracts for the dealer to use at his option and it has insisted that before closing a contract with it the dealer shall have made a definite sale to his customer. The company's practice in this regard has not changed since 1915.

No. 13

Practice as to Entering into a Specific Job Contract with the Dealer, before He Had Sold the Cement to the Consumer

This company has always sought to limit its sales on specific job contracts to dealers to cases where the dealers had a contract for resale.

No. 14

Practice as to Declining to Enter into Specific Job Contracts before the Construction Work Was Ready to Proceed

This company has always been unwilling to enter into specific job contracts where the plans for the construction work had not been drawn, or where the time for the completion of the construction had not been estimated, or where the bids for the construction work had not been asked. Its documentary records show only one in- [fol. 2642½] stance of this kind, but this has been the company's understood and consistent policy, so that requests to quote under such circumstances have not ordinarily been made to it.

No. 15

Practice as to Minimum Quantity to be Sold under a Specific Job Contract

This company has never made specific job contracts requiring less than one carload.

No. 16

Practice as to Permissible Variations in Quantity on Specific Job Contracts

This company's contracts have, since 1912, stated a specific quantity to be furnished, and there has never been any provision for variation therefrom, except that the contracts are interpreted by the company to cover the actual requirements of the specific work according to the original plans.

No. 17

Practice as to Inserting in Specific Job Contracts a Limitation on Maximum Shipment per Month

From April, 1912, to May, 1916, this company's specific job contracts specified a stated maximum amount of shipment per [fol. 2643] month. Since the latter date this company's contracts have contained no such limitation.

No. 18

Practice as to Requiring a Signed Monthly Report from the Dealer Holding a Specific Job Contract, Showing His Deliveries on the Specific Job

This company has never required dealers to submit signed monthly statements showing deliveries on specific job contracts.

No. 19

Practice as to Making Blanket Contracts

Since 1912 this company has always refused to make blanket contracts except with railroads, the United States Government and large industrial companies. Since 1917 this company has refused to make blanket contracts even with large industrial companies.

No. 20

Practice as to Selling Railroads

Until March 4, 1919, this company contracted with railroad companies for future delivery, covering their estimated yearly require-
[fol. 2643½] ments. Effective March 4, 1919, the company quoted railroads only for fifteen day delivery on current or direct requirements or extended delivery for an agreed time on specific work which could be accurately identified and which would be uniform with the company's regular conception of a specific job contract.

No. 21

Practice as to Selling Industrials

Until July 15, 1918, this company sold industrial plants for extended delivery time on contracts covering their estimated yearly requirements. From July 15, 1918, to date industrial plants are sold for extended delivery only on specific job contracts in which the work is accurately identified and which conform to the company's conception of a specific job contract.

No. 22

Practice as to Selling Manufacturers of Concrete Products

This company has always sold at the dealers' price to manufacturers of concrete products if such customers are also dealers in building materials as well as manufacturers of such products.

Prior to April, 1913, the company sold concrete products manufacturers for future delivery either on direct orders for shipment [fol. 2644] within thirty days or else on contracts for future delivery for estimated requirements over a period not exceeding the current year. From April, 1913, to April, 1916, the company sold concrete block manufacturers for extended delivery only on specific job contracts. Since April, 1916, the company sells cement block manufacturers only for fifteen day delivery, not closing specific job contracts with such manufacturers.

No. 23

Practice as to the Use of an Order Blank to be Signed by the Customer

This company has used salesmen's order forms since 1912. The form was not changed between that time and 1915 in any substantial manner. Since June, 1915, the order form has not been changed, except as to change in rates of discount, etc. While the form bears a place for the signature of the customer it is rarely signed by him.

No. 24

Practice as to a Separate Charge for Bin Tests

This company's practice as to bin tests and separate charges therefor has varied. From about January, 1913, to January 28, 1915, there was a bin test charge of six cents. From January 28, 1915, to May 29, 1915, there was a bin test charge of nine cents. From May 29, 1915, until May 16, 1921, there was a bin storage charge of three [fol. 2644½] cents a barrel. Since May 16, 1921, this company has made no charge for such service.

No. 25

Practice as to Assuming Expense of Commercial Laboratory Tests

This company has never borne the expense of commerical laboratory tests since it commenced business.

No. 26

Practice as to Repurchase of Cloth Sacks

Since 1912 this company has adhered strictly to the rule not to repurchase cloth sacks from its customers which were not in serviceable condition.

No. 27

Practice as to Quoting Dealers for Shipment to Towns Other Than Their Home Towns

This company has always quoted and sold dealers at the dealers' price for shipment to towns other than their home towns.

[fol. 2645] No. 28

Practice as to Selling at the Dealers' Price to Persons Who Do Not Comply with Following Definition

"A dealer is a merchant, firm, or corporation regularly engaged in selling portland cement and other building materials purchased by him for re-sale only, who is also properly equipped with storage facilities, supplied with teams or trucks and is recognized in his home town as a building material dealer."

This company has never observed the dealers' definition in quoting the dealers' price, and a large percentage of the customers of this company who have received the dealers' price have never complied with the definition.

No. 29

Practice as to a Dealer's Differential in Price

From January 29, 1913, until December 27, 1913, this company quoted dealers on jobs requiring not more than 7,500 barrels, five cents a barrel less than the consumers.

From December 27, 1913, until the latter part of 1914, the five cent differential was observed up to 15,000 barrels.

From January 28, 1915, to February 23, 1915, the five cent differential was observed on jobs requiring less than 3,000 barrels.

[fol. 2645½] On February 23, 1915, to December 6, 1916, a differential of five cents a barrel was allowed to dealers on all work regardless of quantity.

Since December 6, 1916, a differential of ten cents a barrel has been allowed dealers regardless of quantity.

No. 30

Practice as to Payment of Commissions to Dealers on Cement Sold Direct to Consumers

Up to 1916 this company discouraged payment of commissions to dealers on sales direct to others, but there are some instances up to that year where the company did actually pay commissions to dealers where the sales were made directly to others. Since the latter part of 1916 this company has never paid commissions to dealers on sales made direct to others.

No. 31

Practice as to Giving Special Concessions to Buyers

This company has never given any special concessions in any form directly to buyers.

[fol. 2646] No. 32

Practice as to Mixing Waterproofing Compounds with Cement at the Mills

This company has never incorporated waterproofing compounds with cement at any of its mills.

No. 33

Practice as to Giving Advance Notice of Change in Price

This company has never given advance notice of price change.

No. 34

Practice as to Guaranteeing Sales for Future Delivery Against a Decline in Price

This company's contracts for future delivery contained no clause guaranteeing against decline from at least as early as 1912 to April, 1919.

From April, 1919, to January 31, 1920, this company's contracts contained a clause guaranteeing against decline.

From January 31, 1920, the use of the decline clause was eliminated, but about September, 1920, the company again resumed using it and has continued to do so up to the present time.

[fol. 2646½]

No. 35

Practice as to Making Efforts to Induce Dealers Not To Resell Below the Consumers' Price

This company has never attempted to induce dealers not to sell below the consumer's price.

No. 36

Practice as to Requiring Dealers to State in Their Bids the Name of the Brand on Which They Were Bidding

This company has never required dealers to state in their bids the name of the brand on which they were bidding.

No. 37

Practice as to Membership in Dealers' Organizations

This company belonged to the following dealers' organizations and its records indicate that its membership covered in part at least the periods herein given:

The West Virginia Lumber & Builders' Supply Dealers Association from April, 1916, to April, 1917.

Mason Material Dealers Association of New Jersey during 1917.

[fol. 2647] National Builders Supply Association during 1916 and 1917.

New York State Builders Supply Association during 1915 and 1916 and 1917.

Del-Mar-Col Builders Material Association during 1915, 1916 and 1917.

It also belonged to the New England Builders Supply Association during 1916 and 1917.

After the period mentioned this company has belonged to no dealers' organizations.

Examined and found correct.

John C. Bowen.

DEF'TS' EX. NO. D-517 N

Nazareth Cement Company

Trade Practices Exhibit

Summary of the Files of Invoices, Correspondence, and Quotations and the Ledgers and other Documentary Evidence of Nazareth Cement Company Showing the Trade Practices of the Company

No. 1

Practice as to Time Limit for Acceptance of Trade Quotations

Prior to 1916 this company's trade quotations were for acceptance within from five to twenty days. From January 1st, 1916, to the present time this company's trade quotations have been for immediate acceptance.

[fol. 2648] No. 2

Practice as to Time of Shipment of Trade Orders as Specified in Quotation

Since January 1st, 1916, this company's trade quotations have been for shipment within fifteen days from the date of the order. Prior to January 1st, 1916, there was no provision as to the time within which shipment must be made.

No. 3

Practice as to Quantity Limit in Trade Quotations

Prior to January 1st, 1916, this company's trade quotations contained no limitation as to the quantity to be ordered. From January 1st, 1916, to the present time the company's trade quotations are limited to one carload unless otherwise expressly stipulated in the quotation.

No. 4

Practice as to Cash Discount

This company allowed a cash discount of one cent a barrel from November 1, 1912, to January 24, 1914, a discount of two cents a barrel from January 24, 1914, to November 14, 1915, a discount of five cents a barrel from November 14, 1915, to July 15, 1920, and a [fol. 2648½] discount of ten cents a barrel from July 15, 1920, until the present time.

Since November 1, 1912, the time within which payment must be made has been limited to ten days in the quotations and contracts, but as a matter of practice the company in each year frequently allows the discount when payment is made at a later date.

No. 5

Practice as to Selling Cement at a Price Including Packages

This company has been selling its own product since November 1, 1912, and in that time it has always sold at a price including packages and has never sold the cement separate from the packages in which it was contained except sales made in 1920 to the Carolina Portland Cement Company and to the Long Island Railroad Company.

No. 6

Practice as to Dating of Invoices

Since this company commenced selling its own product on November 1, 1912, it has never dated an invoice other than on the day shipment was made.

[fol. 2649]

No. 7

Practice as to Assuming Responsibility for Loss or Damage in Transit

Prior to 1916 this company's quotations and contracts do not mention anything concerning responsibility for loss or damage en route. Since January 1, 1916, its quotations and contracts state that it will not be responsible for shortage or damage in transit. In practice the company has always refused to assume responsibility for loss or damage in transit.

No. 8

Practice as to Orders Entered for Shipment on a Certain Date

Prior to 1916 this company's contracts and quotations did not contain the clause that orders entered for shipment on a specific date will be shipped on that date unless sooner ordered out by the purchaser. This provision is contained in the company's contracts and quotations since January 1st, 1916.

In practice the company has always, both before and after 1916, accepted orders for shipment on a future date, but allowed the customer to advance or extend the shipping date as he desired.

[fol. 2649½]

No. 9

Practice as to Making Specific Job Quotations in Advance of the Time Bids are to be Opened

This company has never limited the time for making specific job quotations to ten days or any other time before the date bids are to be received. Its practice in that respect has varied with the job and the customer.

No. 10

Practice as to Time Limit for Acceptance of Specific Job Quotations

Prior to 1916 this company used no specific job quotation forms and had only one form of quotation on which it stated "For specific contracts requiring longer time of delivery, ask for prices."

When prices were asked a memorandum of agreement form was used which was not dated when sent out and only contained an acceptance date.

From January 1, 1916, to December 1, 1916, specific job quotations were limited to acceptance within five days of the award of the contract and thirty days from the date of quotation.

Since December, 1916, the specific job quotations were for acceptance within five days of the formal award of the contract and further for acceptance within a limited time from the date of the quotation, usually fifteen days.

[fol. 2650] No. 11

Practice as to Requiring Execution of Formal Contract After Specific Job Quotation Has Been Accepted

This company has never required the execution of a formal specific job contract following the acceptance of a quotation. The quotation when accepted by the customer and returned to the company constitutes the only contract that the company has ever used. The quotation after acceptance by the customer does not have to be signed or approved by an officer of the company but is binding as soon as accepted by the customer.

No. 12

Practice as to Requiring a Written Contract Between Dealer and Consumer Before Entering Into a Specific Job Contract with the Dealer

This company has never required the execution of a written contract between the dealer and his customer in cases where it enters into specific job contracts with the dealer.

[fol. 2650½] No. 13

Practice as to Entering Into a Specific Job Contract with the Dealer Before He had Sold the Cement to the Consumer

This company has never to its knowledge sold cement to dealers on specific job contracts before the dealer had sold the cement to his consumer.

No. 14

Practice as to Declining to Enter Into Specific Job Contracts Before the Construction Work Was Ready to Proceed

This company has never declined to make a specific job contract because the plans for the construction work had not been drawn or because the time of completion of the construction work had not been estimated or because the bids or proposals for the construction work had not been asked for. The company always has entered into specific job contracts whenever requested.

No. 15

Practice as to Minimum Quantity to be Sold under a Specific Job Contract

This company has no record of ever having been asked to bid on a specific job contract for less than one carload.

[fol. 2651] No. 16

Practice as to Permissible Variations in Quantity of Specific Job Contracts

Since this company began selling direct to customers on November 1st, 1912, and until January 1st, 1916, its practice varied as to the limitation of cement to be delivered under its specific job contracts, the contracts themselves during this period containing no limitation except such as may have been written in on the typewriter in individual cases; since January 1st, 1916, the quantity covered in its specific job contracts has always been estimated, with an allowable variation of ten per cent more or less.

No. 17

Practice as to Inserting in Specific Job Contracts a Limitation on Maximum Shipment per Month

While the company's specific job quotations and contracts contain the clause, "Quantity to be shipped not to exceed, however, — barrels within any one month," this is never filled in, and a stated maximum of shipments each month is not required to be stated by the customer.

[fol. 2651½] No. 18

Practice as to Requiring a Signed Monthly Report from the Dealer Holding a Specific Job Contract, Showing His Deliveries on the Specific Job

This company has never required a signed monthly statement from the dealer showing deliveries made by him on specific job contracts.

No. 19

Practice as to Making Blanket Contracts

This company has always made blanket contracts since it began selling direct to its customers in November, 1912.

No. 20

Practice as to Selling Railroads

From 1912 to September 9, 1918, this company has sold railroads and electric lines at consumers' prices; from September 9, 1918, to December 9, 1918, it sold to railroads and electric lines at the Government price; from December 9, 1918, to the present time it has sold railroads and electric lines at dealers' prices. In some cases the sales to railroads and electric lines have been f. o. b. the company's [fol. 2562] plant, in others f. o. b. their lines to nearest junction points; and in other cases f. o. b. point of destination. The sales to railroads and electric lines have always been for future delivery.

No. 21

Practice as to Selling Industrials

This company has always sold to industrials at the consumers' price on contracts for future delivery.

No. 22

Practice as to Selling Manufacturers of Concrete Products

This company has always sold to concrete products manufacturers at the consumers' price, and in some cases for future delivery.

No. 23

Practice as to the Use of an Order Blank to be Signed by the Customer

This company has never provided its salesmen with order blanks to be signed by the customer.

[fol. 2652½] No. 24

Practice as to a Separate Charge for Bin Tests

This company during 1913 and 1914 and the month of January, 1915, made a charge of six cents a barrel for bin test; from February 1st, 1915, to December 16th, 1915, no charge was made; from December 16th, 1915, to August 2nd, 1921, a charge of three cents per barrel was made; from August 2nd, 1921, to date no charge has been made.

No. 25

Practice as to Assuming the Expense of Commercial Laboratory Tests

This company has never assumed the expense of commercial laboratory tests since it commenced business in 1912.

No. 26

Practice as to Repurchase of Cloth Sacks

In 1913 this company made allowance in full for all serviceable sacks returned; after 1913 it made full allowance, not only for serviceable sacks but for those actually worn out by continuous service; it has only refused credit on returned sacks which had evidently been abused; and in every year it has paid for some sacks which it was unable to use again.

[fol. 2653] Since May 1, 1920, the company's contracts of sale provided that it retain title to the sacks, and are merely leased to the customer. Prior to that time the sacks were sold and repurchased.

No. 27

Practice as to Quoting Dealers for Shipment to Towns Other Than Their Home Towns

This company has always quoted and sold to dealers for shipment to towns other than their home towns at dealers' prices.

No. 28

Practice as to Selling at the Dealers' Price to Persons Who Do Not Comply With Following Definition

"A dealer is a merchant, firm, or corporation regularly engaged in selling portland cement and other building materials purchased by him for resale only, who is also properly equipped with storage facilities, supplied with teams or trucks and is recognized in his home town as a building material dealer."

This company has never limited its sales at dealers' prices to persons conforming to the definition of a dealer quoted above.

[fol. 2653½] No. 29

Practice as to a Dealer's Differential in Price

On January 27th, 1913, this company allowed a dealer's differential of five cents a barrel less than the consumer's price. This differential was observed until December 6th, 1916, when it was advanced to ten cents a barrel, at which figure it has remained since then.

No. 30

Practice as to Payment of Commissions to Dealers on Cement Sold Direct to Consumers

This Company has in every year paid commissions to dealers on cement sold direct to others.

No. 31

Practice as to Giving Special Concessions to Buyers

This company has given special concessions to its buyers in many cases since 1913 to the present time.

[fol. 2654]

No. 32

Practice as to Mixing Waterproofing Compounds With Cement at the Mills

This company in 1914 and 1915 mixed waterproofing compounds with cement at the mills to a small extent, but discontinued doing so on September 15th, 1915, because of the bad results which the mixture had upon the machinery and because of its injurious effect upon the employe.

No. 33

Practice as to Giving Advance Notice of Change in Price

This company has never given advance notice of price change.

No. 34

Practice as to Guaranteeing Sales for Future Delivery Against a Decline in Price

This company never inserted a clause guaranteeing contracts of sale against a decline in price until May 13, 1919. Such a clause has been inserted in typewriting on its specific job quotations from that date until the present time. The company has never used such a clause in its trade quotations.

[fol. 2654½]

No. 35

Practice as to Making Efforts to Induce Dealers Not to Resell Below the Consumers' Price

This company has never made any effort to induce dealers not to resell below the consumers' price, nor has it in any way interfered with the price that its dealers would charge on a resale of cement.

No. 36

Practice as to Requiring Dealers to State in Their Bids the Name of the Brand on Which They were Bidding

This company has never required dealers to state in their bids the name of the brand on which they were bidding.

No. 37

Practice as to Membership in Dealers' Organizations

From 1913 to May 5, 1917, this company was a member of the Mason Material Dealers' Association of New Jersey and withdrew on the latter date.

From 1914 to May, 1917, they were members of the New York State Builders' Supply Association.

From May, 1917, to the present time, the company has not been a member of any such organization.

Examined and found correct.

Nazareth Cement Co., by S. J. Fehnel.

[fol. 2655] DEF'TS' EX. NO. D-517 O

Penn-Allen Cement Company

Trade Practices Exhibit

Summary of the Files of Invoices, Correspondence and Quotations and the Ledgers and Other Documentary Evidence of Penn-Allen Cement Company Showing the Trade Practices of the Company

NOTE.—From 1910 to 1915 the product of this company was sold William G. Hartfranft Cement Company of Philadelphia, so that the trade practice proof of this company will not antedate 1915.

No. 1

Practice as to Time Limit for Acceptance of Trade Quotations

In 1915 trade quotations were for acceptance within seven days. In April, 1916, acceptances were limited to five days. This limita-
[fol. 2655½] tion continued until March 27, 1917, since which time quotations have been for immediate acceptance.

No. 2

Practice as to Time of Shipment of Trade Orders as Specified in Quotations

In 1915 this company's quotations were for shipment within thirty days from the date of the quotation. In April, 1919, the quotations were limited to shipment within fifteen days from the date of the quotation and that was effective until March 27, 1917, when it was changed to shipment within fifteen days of the date of the order.

No. 3

Practice as to Quantity Limit in Trade Quotations

In 1915 trade quotations were for a unit of 150 barrels. In 1916 the quotations were for a unit of 300 barrels, and on March 27, 1917, the unit was changed to one car. This latter unit has been used since that date.

No. 4

Practice as to Cash Discount

From July, 1915, to November, 1915, a cash discount of two cents a barrel was allowed. From November, 1915 to July, 1920, a cash [fol 2656] discount of five cents a barrel was allowed. From July, 1920, to date the cash discount has been ten cents a barrel.

This discount has been allowed only if payment was made within ten days of the date of the invoice. There has been no change in the time in which discount can be taken since this company started to sell its output in 1915.

No. 5

Practice as to Selling Cement at a Price Including Packages

This company has never quoted cement at a price excluding packages and has never had any request to sell cement exclusive of packages with the exception of sales made in 1919 and 1922 to the Federal Concrete Company, Buffalo, N. Y.

No. 6

Practice as to Dating of Invoices

This company since it began selling its output in 1915 has never dated an invoice other than on the day shipment was made.

No. 7

Practice as to Assuming Responsibility for Loss or Damage in Transit

This company has never held itself responsible for loss or damage [fol. 2656½] occurring in transit. Since March, 1917, its contracts and quotations have contained a clause disclaiming liability therefor.

No. 8

Practice as to Orders Entered for Shipment on a Certain Date

Since 1915 this company has not made it a term of sale that orders entered for shipment on a specific date should be shipped out on that date unless sooner ordered out by the purchaser. Where request is made for extension of time of shipment it has always been granted.

No. 9

Practice as to Making Specific Job Quotations in Advance of the Time Bids Are to be Opened

This company has never limited the time for making specific job quotations and has always given them regardless of the time of bidding.

No. 10

Practice as to Time Limit for Acceptance of Specific Job Quotations

During 1915 the company's quotations were only good for accept-
[fol. 2657] ance within five days from the date quotation was made. Later in the year 1915 this period was extended to seven days. During 1916 quotations were made good for acceptance within a period which varied considerably, sometimes being limited to five days and sometimes to as much as thirty days and sometimes also limited to acceptance within five days of the formal award of the contract.

Since March 27, 1917, the quotation is for acceptance within five days of the formal award of the contract and is void if not accepted within fifteen days from the date of the quotation.

No. 11

Practice as to Requiring Execution of Formal Contract After Specific Job Quotation Has Been Accepted

This company does not now and never has required the execution of a regular form of specific job contract. The company makes a quotation and when the customer accepts it, that is treated as a contract.

No. 12

Practice as to Requiring a Written Contract Between Dealer and Consumer Before Entering Into a Specific Job Contract with the Dealer

This company has never required the execution of a written con-
[fol. 2657½] tract between the dealer and his customer in the cases where the company enters into a specific job contract with the dealer.

No. 13

Practice as to Entering Into a Specific Job Contract with the Dealer, Before He Had Sold the Cement to the Consumer

This company has never knowingly placed a specific job contract with a dealer until after the dealer had closed his contract with the customer.

No. 14

Practice as to Declining to Enter Into Specific Job Contracts Before the Construction Work Was Ready to Proceed

This company has never declined a specific job contract because the plans had not been drawn or because the time of completion of the construction work had not been estimated, but it has declined to make such a contract in cases where the construction work has not yet been asked for.

[fol. 2658]

No. 15

Practice as to Minimum Quantity to be Sold Under a Specific Job Contract

This company has never made a specific job contract for less than one carload.

No. 16

Practice as to Permissible Variations in Quantity on Specific Job Contracts

This company has never provided in its specific job contracts and quotations for a variation over or under the quantity ordered. Its practice has always been to contract for the entire and actual quantity which shall be used in the work, with an estimate as to what that quantity would be.

No. 17

Practice as to Inserting in Specific Job Contracts a Limitation on Maximum Shipment Per Month

This company's contracts have never contained a provision for a stated maximum amount of shipment per month on its specific job contracts.

[fol. 2658½]

No. 18

Practice as to Requiring a Signed Monthly Report from the Dealer Holding a Specific Job Contract, Showing His Deliveries on the Specific Job

This company has never insisted on a signed report from the dealer showing his deliveries on the specific job.

No. 19

Practice as to Making Blanket Contracts

This company has at times made blanket contracts. Such contracts appear in the years 1915, 1916 and 1918.

No. 20

Practice as to Selling Railroads

This company has quoted railroads on current business for shipment within fifteen days and has at times contracted for deliveries of cement to railroads for a period up to one year.

[fol. 2659]

No. 21

Practice as to Selling Industrials

This company since 1915 when it began selling its own product has always sold industrials on current business only for fifteen day shipment. The only exceptions occurred in two cases in 1916. It has always sold industrials for specific work for future delivery.

No. 22

Practice as to Selling Manufacturers of Concrete Products

This company since it began selling in 1915, always sold concrete products manufacturers at the consumers' price except where such manufacturers were also dealers. From 1915 to 1919 concrete product manufacturers were sold for thirty days delivery and from 1919 to date for fifteen days shipment.

No. 23

Practice as to the Use of an Order Blank to be Signed by the Customer

This company has never provided its salesmen with a form of order blank and orders from customers are taken orally and by letter or telegram. The company does not insist on a signed order from the customer and never has.

[fol. 2659½]

No. 24

Practice as to a Separate Charge for Bin Tests

This company has made a charge for bin tested cement from March 16, 1917, to May 21, 1921, of three cents per barrel. It has made no separate charge for bin tested cement prior to or subsequent to that period.

No. 25

Practice as to Assuming Expense of Commercial Laboratory Tests

This company has never borne the expense of commercial laboratory tests.

No. 26

Practice as to Repurchase of Cloth Sacks

There has been no change in this company's practice in this regard since 1915. The company does not buy its empty sacks from jun' dealers, but will buy them back from anyone else, not limiting the purchase to the original purchaser of the cement. It has also allowed by additional special credit, credit on worthless bags shown on the original credits.

[fol. 2660]

No. 27

Practice as to Quoting Dealers for Shipment to Towns other than Their Home Towns

This company has always quoted and sold to dealers for shipment to towns other than their home towns.

No. 28

Practice as to Selling at the Dealers' Price to Persons who do not Comply with Following Definition

"A dealer is a merchant, firm, or corporation regularly engaged in selling portland cement and other building materials purchased by him for resale only, who is also properly equipped with storage facilities, supplied with teams or trucks and is recognized in his home town as a building material dealer."

This company has never limited its dealers' price to customers falling within the above definition.

No. 29

Practice as to a Dealer's Differential in Price

This company has always made a distinction between dealers and [fol. 2660½] consumers, the differential being five cents per barrel until December 17, 1916, when it was made ten cents per barrel, at which figure it has remained constant since then.

No. 30

Practice as to Payment of Commissions to Dealers on Cement Sold Direct to Consumers

This company has never paid commissions to dealers.

No. 31

Practice as to Giving Special Concessions to Buyers

This company has never made any special concessions in any form, directly or indirectly, to buyers.

No. 32

Practice as to Mixing Waterproofing Compounds with Cement at the Mills

This company incorporates waterproofing compounds with cement at its mills. It has done this off and on since 1914.

[fol. 2661] No. 33

Practice as to Giving Advance Notice of Change in Price

This company has never given advance notice of a price change and it has always made its quotations effective on the date the quotation was made.

No. 34

Practice as to Guaranteeing Sales for Future Delivery Against a Decline in Price

This company never guaranteed a price against decline in its quotations or contracts except in the year 1919.

No. 35

Practice as to Making Efforts to Induce Dealers not to Resell Below the Consumers' Price

This company has never made any effort to interfere in any way with the prices charged on the resale of its cement by its customers.

[fol. 2661½] No. 36

Practice as to Requiring Dealers to State in Their Bids the Name of the Brand on Which They were Bidding

This company has never attempted to require dealers to state in their bids the name of the brand on which they were bidding.

No. 37

Practice as to Membership in Dealers' Organizations

This company has never been a member of any dealers' association except the Del-Mar-Col of Maryland from 1916 to 1918.

Examined and found correct.

M. J. Trainor.

[fol. 2662] DEF'TS' EX. NO. D-517P

Pennsylvania Cement Company

Trade Practices Exhibit

Summary of the Files of Invoices, Correspondence and Quotations and the Ledger and other Documentary Evidence of Pennsylvania Cement Company Showing the Trade Practices of the Company

No. 1

Practice as to Time Limit for Acceptance of Trade Quotations

This company has never had any form of trade quotation. Quotations are made to the trade by the company's salesmen verbally, by telephone and by letter. These quotations are made by letter only upon request and contain no time limit for acceptance.

[fol. 2662½] No. 2

Practice as to time of Shipment of Trade Orders as Specified in Quotation

This company has never used trade quotation forms. Most of the quotations which this company has sent out by letter in response to the request of its customers have contained no limitation as to the time of shipment, although in some instance in 1920 a 15-day limitation as to shipment appears. There is no uniform practice in this respect.

No. 3

Practice as to Quantity Limit in Trade Quotations

This company has never used any form of trade quotation. Its quotations by letter to its customers when made upon request usually quoted on the quantity which the customer desired unless it was less than one carload, in which cases the quotation was given on one carload, and where the customer did not state any quantity in his inquiry the quotation contained no quantity limitation.

No. 4

Practice as to Cash Discount

This company allowed a cash discount of one cent per barrel from [fol. 2663] the latter part of 1907 to January 15th, 1914, inclusive. It allowed a discount of two cents per barrel from January 15th, 1914, to January 16, 1916. It allowed a discount of five cents per barrel from January 16th, 1916, to June 10th, 1920. From the latter date to the present time this cash discount has been ten cents per barrel. It has in many cases allowed the cash discount after the 10-day period had expired.

No. 5

Practice as to Selling Cement at a Price Including Packages

It has always been the uniform practice of this company to quote on cement including packages. The company has no record of ever having quoted prices with the package separate except in cases in which it sold cement in bulk, these exceptions occurring, however, only when bags were unobtainable.

No. 6

Practice as to Dating of Invoices

Since this company has been doing business it has always dated invoices on the date of shipment and there is no record that it has ever dated an invoice other than on the date shipment was made, with the exception that for sometime prior to 1916 the company delivered by truck in New York from its boats, in which case the invoices were dated on the day of delivery. This was discontinued in 1916.

[fol. 2663½] No. 7

Practice as to Assuming Responsibility for Loss or Damage in Transit

This company's contracts have never contained a clause exempting it from responsibility for loss or damage in transit.

No. 8

Practice as to Orders Entered for Shipment on a Certain Date

Since 1914 this company's contracts have contained a clause that the cement furnished under the contract must be ordered out prior to a certain date unless the time is extending in writing by the seller. There has never been any other provision in the company's contracts bearing on this question.

No. 9

Practice as to Making Specific Job Quotations in Advance of the Time Bids are to be Opened

This company has never limited the time for making specific job quotations. It has always quoted when requested without regard to the time when bids are to be opened.

[fol. 2664] No. 10

Practice as to Time Limit for Acceptance of Specific Job Quotations

This company's specific job quotations have always provided that acceptance must be made within 15 days. This has been the company's practice since as early as 1913.

No. 11

Practice as to Requiring Execution of Formal Contract After Specific Job Quotation Has Been Accepted

This company has never used a separate form of specific job sales contract. Prior to 1914 the company's quotations were accepted by letter, which constituted a contract. The quotations in use since 1914 when accepted by the customer are signed by an officer of the company and when so signed constitute a contract.

No. 12

Practice as to Requiring a Written Contract Between Dealer and Consumer Before Entering into a Specific Job Contract with the Dealer

This company has never required that a written contract be entered into between the dealer and the consumer before it would enter [fol. 2564½] into a specific job contract with the dealer.

No. 13

Practice as to Entering Into a Specific Job Contract with the Dealer, Before He Had Sold the Cement to the Consumer

This company's practice has always been to sell cement to the dealer on specific job contracts without inquiring whether or not he has sold it to his consumer.

No. 14

Practice as to Declining to Enter Into Specific Job Contracts Before the Construction Work was Ready to Proceed

This company has never declined a specific job contract because the time of completion of the construction work had not been estimated or because the plans had not been drawn or because the bids or proposals for the construction work had not been asked for.

[fol. 2665]

No. 15

Practice as to Minimum Quantity to be Sold under a Specific Job Contract

This company has never quoted and has never been requested to quote on a specific job contract for less than one carload as far as any of the company's records disclose.

No. 16

Practice as to Permissible Variations in Quantity on Specific Job Contracts

Since at least as early as 1915 this company's specific job contracts have contained a provision that if the amount provided for should be "more or less" it is understood to imply a leeway of not more than 15 per cent. Since that date the company's specific job contracts have either been for a specific amount as stated or for amount with the phrase "more or less."

No. 17

Practice as to Inserting in Specific Job Contracts a Limitation on Maximum Shipment per Month

This company's specific job contracts have provided since as early as 1915 that the cement shall be ordered out in equal monthly proportions. This clause is seldom enforced and frequently the cus-[fol. 2665½] tomer is permitted to order out the cement on such deliveries as the job requires.

No. 18

Practice as to Requiring a Signed Monthly Report from the Dealer Holding a Specific Job Contract, Showing His Deliveries on the Specific Job

This company has never requested signed monthly statements from the dealer holding a specific job contract showing his deliveries on the specific job except in 1920 when a few requests were made to dealers in New York City for such reports. The company's contracts since as early as 1915 have contained the clause that the company may require the purchaser to furnish satisfactory evidence that the cement is being used in the construction of the work specified, but no other clause bearing on this question has ever appeared in the company's contracts.

No. 19

Practice as to Making Blanket Contracts

This company since as early as 1915 has made blanket contracts.

[fol. 2666]

No. 20

Practice as to Selling Railroads

This company has always since 1915 sold to railroads for their yearly requirements. In some cases the sales were made at the dealers' price and in some at the consumer's price.

No. 21

Practice as to Selling Industrials

The company has always sold to industrial plants and electric lines for their yearly requirements at prices sometimes above the dealers' price and sometimes at the dealers' price.

No. 22

Practice as to Selling Manufacturers of Concrete Products

This company has sold manufacturers of concrete products sometimes at the dealers' price, and sometimes at the consumers' price, and for delivery within 15 days or without any stated limitation as to shipment, but which the company treats as immediate delivery, as in the case of all trade quotations.

[fol. 2666½] No. 23

Practice as to the Use of an Order Blank to be Signed by the Customer

Since as early as 1911 this company has used an order blank which contains a space for the purchaser's signature. This blank is rarely signed by the customer, but the company executes its orders whether the blank is signed by the purchaser or not.

No. 24

Practice as to a Separate Charge for Bin Tests

Prior to June 1st, 1915, this company made a charge of six cents per barrel for bin tests. From June 1st, 1915, to June 3rd, 1921, the charge was three cents per barrel. From June 3rd, 1921, to the present time there has been no charge for bin tests.

No. 25

Practice as to Assuming Expense of Commercial Laboratory Tests

This company has never borne the expense of a commercial laboratory test unless in the case of dispute with a customer as to the quality of the cement furnished him, when a test has been made merely as a matter of settlement of the dispute.

[fol. 2667] No. 26

Practice as to Repurchase of Cloth Sacks

This company in many instances in every year since at least as early as 1915 has given credit for worthless sacks.

No. 27

Practice as to Quoting Dealers for Shipment to Towns Other Than Their Home Towns

This company has always quoted to dealers for shipment to towns other than their home towns except in cases where the company had a dealer at the delivery point.

No. 28

Practice as to Selling at a Dealers' Price to Persons Who Do Not Comply With Following Definition

"A dealer is a merchant, firm, or corporation regularly engaged in selling Portland cement and other building materials purchased by him for resale only, who is also properly equipped with storage facilities, supplied with teams or trucks and is recognized in his home town as a building material dealer."

This Company has sold in every year to dealers at the dealers' price who do not comply with the above definition.

[fol. 2667½] No. 29

Practice as to a Dealer's Differential in Price

This company has never adopted a uniform practice as to dealers' differential, and in every year since it has been in business and up to the present time its differential between dealers' and contractors' prices has varied from 5 to 25 cents and it has been different in each year according to the locality in which the dealer was situated.

No. 30

Practice as to Payment of Commissions to Dealers on Cement Sold Direct to Consumers

This company has in every year paid commissions to dealers on cement sold direct to others.

No. 31

Practice as to Giving Special Concessions to Buyers

This company has from time to time made special concessions to buyers.

[fol. 2668] No. 32

Practice as to Mixing Waterproofing Compounds With Cement at the Mills

This company's policy has always been not to mix waterproofing compounds with its cement at the mill. There are a very few exceptions to this policy.

No. 33

Practice as to Giving Advance Notice of Change in Price

This company has never given advance notice of price change.

No. 34

Practice as to Guaranteeing Sales for Future Delivery Against a Decline in Price

Prior to 1918 this company did not guarantee sales against decline in price. About the middle of that year the company stamped upon its contracts a guaranty that the price of undelivered cement would be adjusted to market price at the date of delivery, but such stamp was used only when the customer requested it.

[fol. 2668½] No. 35

Practice as to Making Efforts to Induce Dealers Not to Resell Below the Consumers' Price

This company has never made any efforts to induce dealers not to resell below the consumers' price.

No. 36

Practice as to Requiring Dealers to State In Their Bids the Name of the Brand on Which They Were Bidding

This company has never required dealers to state in their bids the name of the brand on which they are bidding.

No. 37

Practice as to Membership in Dealers' Organizations

This company was a member of the Mason Material Dealers Association of New Jersey from 1913 to 1917; the Eastern Pennsylvania Building Material Dealers Association until 1917.

Examined and found correct.

James W. Alder.

Phœnix Portland Cement Company

Trade Practices Exhibit

Summary of the Files of Invoices, Correspondence and Quotations and the Ledgers and Other Documentary Evidence of Phœnix Portland Cement Company Showing the Trade Practices of the Company

NOTE.—Prior to 1917 this company's entire product was marketed by the William G. Hartranft Company as sole selling agent, and the company has no record of any trade practices affecting its product prior to that period.

No. 1

Practice as to Time Limit for Acceptance of Trade Quotations

This company has used the same form of trade quotations since it [fol. 2669½] commenced to sell direct to the trade. The quotation is not in terms limited for acceptance, but is stated to apply only to immediate orders.

No. 2

Practice as to Time of Shipment of Trade Orders as Specified in Quotation

Since this company began to sell direct in 1917 its trade quotations have all been for shipment within fifteen days from the date of the order.

No. 3

Practice as to Quantity Limit in Trade Quotations

Since this company began selling direct in 1917 its trade quotations have contained a clause that unless otherwise agreed the quotation is limited to one carload of cement.

No. 4

Practice as to Cash Discount

This company allowed a cash discount for payment in full within ten days of the date of the invoice of five cents a barrel, from as far [fol. 2670] back as its records are available until July 15th, 1920. It has allowed a cash discount of ten cents a barrel since that time. It customarily allows the cash discount when payment is made a longer time than ten days from the date of the invoice.

No. 5

Practice as to Selling Cement at a Price Including Packages

As far back as this company's records go it has always quoted and sold cement at a price including package. The only request it had to sell cement separately from the package was from the Bureau of Supply and Accounts of the Navy Department.

No. 6

Practice as to Dating of Invoices

This company has no record of any case in which it has ever dated an invoice other than on the day shipment was made.

No. 7

Practice as to Assuming Responsibility for Loss or Damage in Transit

This company has never assumed responsibility for loss or damage en route and has always provided as a term of sale that its responsibility ended with the delivery of the cement to the carrier.

[fol. 2670½] No. 8

Practice as to Orders Entered for Shipment on a Certain Date

This company's trade quotations have always contained a clause that orders entered for shipment on a specific date will at its option be shipped on that date unless sooner ordered out by purchaser. There is no record of its ever having enforced this provision.

No. 9

Practice as to Making Specific Job Quotations in Advance of the Time Bids Are to be Opened

This company has never declined to make specific job quotations because the bids are not to be received in a specific time. It has always made quotations on request, but as all of the specific job quotations are limited to fifteen days' acceptance the quotation is in fact not effective after that time, and the company does not guarantee the price to be in effect at the time the bids are opened, if that is more than fifteen days after the making of the quotation.

No. 10

Practice as to Time Limit for Acceptance of Specific Job Quotations

This company's specific job quotations are limited for acceptance within fifteen days. There has been no variation in that practice [fol. 2671] since the company commenced to sell in 1917.

No. 11

Practice as to Requiring Execution of Formal Contract After Specific Job Quotation Has Been Accepted

This company now requires the execution of a regular form of specific job sales contract following the acceptance of its quotation. Prior to the summer of 1920 it did not require a separate form of contract, but merely the acceptance at the foot of its specific job quotation.

No. 12

Practice as to Requiring a Written Contract Between Dealer and Consumer Before Entering Into a Specific Job Contract With the Dealer

This company has never required that a written contract be entered into between the dealer and the consumer before it will enter into a specific job contract with the dealer.

No. 13

Practice as to Entering Into a Specific Job Contract With the Dealer Before He Had Sold the Cement to the Consumer

This company has never to its knowledge sold cement to dealers on specific job contracts before the dealer had sold the cement to his customer.

No. 14

Practice as to Declining to Enter Into Specific Job Contracts Before the Construction Work Was Ready to Proceed

This company can find no correspondence or records of any case in which it has refused to make a specific job contract because the construction work had not been awarded to the contractor.

No. 15

Practice as to Minimum Quantity to Be Sold Under a Specific Job Contract

This company has never made a specific job contract for less than one carload.

[fol. 2672]

No. 16

Practice as to Permissible Variations in Quantity on Specific Job Contracts

This company's specific job contracts have never limited the amount to be called for. The agreement is to furnish the full re-

quirements for the job, with an estimate as to the amount that is to be required.

No. 17

Practice as to Inserting in Specific Job Contracts a Limitation on Maximum Shipment per Month

As far back as the company's records go it has always stipulated in its specific job contracts a maximum shipment which it should not be required to exceed in any thirty days, and a period beyond which it should not be required to ship on the contract in any event.

No. 18

Practice as to Requiring a Signed Monthly Report From the Dealer Holding a Specific Job Contract, Showing His Deliveries on the Specific Job

This company has never required a signed monthly statement from the dealer showing deliveries made by him on specific job contracts.

[fol. 2672½] No. 19

Practice as to Making Blanket Contracts

This company has never made any blanket contracts with others than the United States Government, states, counties, municipalities and steam railroads.

No. 20

Practice as to Selling Railroads

During 1917 this company sold railroads their year's requirements on blanket contracts at the consumer's price. Since 1918 it has sold railroads at the dealer's price, but only on its regular specific work contracts or for current shipments within fifteen days.

No. 21

Practice as to Selling Industrials

This company has no contracts in its files showing sales to industrials or electric lines.

No. 22

Practice as to Selling Manufacturers of Concrete Products

This company has always sold at the dealer's price to some concrete products manufacturers. It has no record of having sold any [fol. 2673] concrete products manufacturers for future delivery.

No. 23

Practice as to the Use of an Order Blank to be Signed by the Customer

This company has used its own order form, with a place for the signature of the customer, since it began to sell direct in 1917. It is not usual to enforce the signature of the customer, the order usually being signed only by the salesman.

No. 24

Practice as to a Separate Charge for Bin Tests

This company usually made a charge of 3 cents a barrel for bin tested cement from the time it commenced to sell direct to customers until the spring of 1921. Since that date it has made no charge for this service. In some instances it furnished bin tested cement at no extra charge prior to that date.

No. 25

Practice as to Assuming the Expense of Commercial Laboratory Tests

This company has never borne the expense of commercial laboratory tests since it commenced business.

[fol. 2673½] No. 26

Practice as to Repurchase of Cloth Sacks

This company has never repurchased cloth sacks from its customers that were not in serviceable condition. There has been no change as to its practice in that regard from that which prevailed while it was selling to the Hartranft Company as its sole selling agent.

No. 27

Practice as to Quoting Dealers for Shipment to Towns Other Than Their Home Towns

This company has in every year quoted and sold dealers for shipment to towns other than their home towns at the dealers' price.

No. 28

Practice as to Selling at the Dealer's Price to Persons Who Do Not Comply with Following Definition

"A dealer is a merchant, firm, or corporation regularly engaged in selling portland cement and other building materials purchased

by him for resale only, who is also properly equipped with storage facilities, supplied with teams or trucks and is recognized in his home town as a building material dealer."

[fol. 2674] This company has never confined its sales at the dealers' price to persons complying with the above definition.

No. 29

Practice as to a Dealer's Differential in Price

When this company commenced selling direct in January, 1917, it allowed a dealers' differential of 10 cents per barrel below the consumers' price and it has always observed this differential since then.

No. 30

Practice as to Payment of Commissions to Dealers on Cement Sold Direct to Consumers

This company has in every year paid commissions to dealers on cement sold direct to others.

No. 31

Practice as to Giving Special Concessions to Buyers

This company has from time to time made special concessions to buyers to induce sales.

[fol. 2674½]

No. 32

Practice as to Mixing Waterproofing Compounds with Cement at the Mills

This company has never incorporated waterproofing compounds with cement at its mills.

No. 33

Practice as to Giving Advance Notice of Change in Price

This company has never given advance notice of price change.

No. 34

Practice as to Guaranteeing Sales for Future Delivery Against a Decline in Price

Since April 1st, 1919, this company has guaranteed its specific work contracts against a decline in price whenever such a guarantee has been requested by the purchaser. It did not incorporate such a guarantee in its contracts from 1917 to 1919.

[fol. 2675] No. 35

Practice as to Making Efforts to Induce Dealers Not to Resell Below the Consumers' Price

This company has never attempted to induce dealers not to resell below the consumers' price.

No. 36

Practice as to Requiring Dealers to State in Their Bids the Name of the Brand on Which They Were Bidding

This company has never required dealers to state in their bids the name of the brand on which they are bidding.

No. 37

Practice as to Membership in Dealers' Organizations

This company has never been a member of any dealers' organization.

Examined and found correct.

A. W. Nash, Jr.

[fol. 2675½] DEF'TS' EX. NO. D-517R

Security Cement & Lime Company

Trade Practices Exhibit

Summary of the Files of Invoices, Correspondence and Quotations and the Ledgers and Other Documentary Evidence of Security Cement & Lime Company Showing the Trade Practices of the Company

No. 1

Practice as to Time Limit for Acceptance of Trade Quotations

From 1912 to 1916 the time limited for acceptance of trade quotations varied; in some cases no time limit was mentioned, some were for five days' acceptance, some for ten days' acceptance and some for prompt acceptance.

[fol. 2676] From the beginning of 1916 to October 28th, 1916, some were for acceptance within ten days and some were for acceptance within five days.

From October, 1916, until September, 1918, they were for acceptance within fifteen days. Since September, 1918, they have been for immediate acceptance.

This company has always made some trade quotations in special letters instead of on printed quotation forms, and usually such letters have no time limit for acceptance.

No. 2

Practice as to Time of Shipment of Trade Orders as Specified in Quotation

Prior to 1916 the company's trade quotations were usually limited for shipment within thirty days. Since October, 1916, they have been limited for shipment within fifteen days from the date of order.

No. 3

Practice as to Quantity Limit in Trade Quotations

Prior to September, 1918, this company's trade quotations were in carload lots with no limitation as to the number of carloads.

Since September 13th, 1918, they have been in terms limited to one carload.

[fol. 2676½]

No. 4

Practice as to Cash Discount

This company allowed a cash discount for payment in full within ten days from date of invoice of one cent per barrel from some time in 1911 to February 1st, 1914. It allowed a cash discount of two cents a barrel from February 1st, 1914, to November 17th, 1915; a cash discount of five cents a barrel from November, 1915, to July, 1920, and a cash discount of ten cents a barrel since the latter date.

This company has never strictly enforced the ten day limitation and has frequently allowed cash discounts after the ten day period had expired.

No. 5

Practice as to Selling Cement at a Price Including Packages

This company has always quoted and sold cement at a price including packages with the exception of certain sales of cement in bulk and certain contracts with departments of the United States Government. Other than in these cases it has no record of ever having received a request for cement in packages with prices separate.

No. 6

Practice as to Dating of Invoices

This company has, since it has been in business, never dated an invoice other than on the day shipment was made.

[fol. 2677]

No. 7

Practice as to Assuming Responsibility for Loss or Damage in Transit

Prior to 1915 this company's terms of sale were at a price with freight allowed to the customer's station, with a specific disclaimer for liability for loss or damage in transit sometimes included in the contract and sometimes not.

Since January, 1915, the company's printed forms have contained a specific disclaimer of such liability. In practice, however, the company has sometimes assumed and paid claims arising from damage in transit.

No. 8

Practice as to Orders Entered for Shipment on a Certain Date

This company's contracts of sale and quotations have never provided that orders entered for shipment on a specific date would be shipped on that date unless sooner ordered out by the purchaser.

No. 9

Practice as to Making Specific Job Quotations in Advance of the Time Bids Are to Be Opened

This company has never placed any limitation on the time before bids are received when it will make specific job quotations. It has [fol. 2677½] always made such quotations at any time requested by contractor. There has been no change as to its practice in this regard since 1911.

No. 10

Practice as to Time Limit for Acceptance of Specific Job Quotations

From 1911 to 1916 this company's specific job quotations were limited for acceptance in varying times; in some cases for prompt acceptance, in others for acceptance by return mail and in some instances no time limit was imposed.

From March, 1916, to July, 1916, they were for acceptance within thirty days. Since July, 1916, they have been for acceptance within fifteen days.

No. 11

Practice as to Requiring Execution of Formal Contract After Specific Job Quotation Has Been Accepted

Prior to 1915 the company had no standard practice. In some cases specific job contract forms were executed and in other cases contracts were consummated by the acceptance of quotations made in letters or otherwise.

During the year 1915 and up to March, 1916, the execution of a written form of specific job contract was required in nearly every case.

Since March, 1916, the company has quoted for specific job contracts on a printed form containing a place for formal acceptance by the customer, and since that date it has not required the execution of a regular form of contract other than the acceptance of its quotation.

No. 12

Practice as to Requiring a Written Contract Between Dealer and Consumer Before Entering into a Specific Job Contract with the Dealer

From January, 1915, to March, 1916, the company's contract form contained a clause as follows:

"That the buyer has contract duly signed and executed on the —— day of —— ——, with —— ——, contractor, covering the work herein described (for whose benefit this contract is made)."

This provision was abandoned in March, 1916, and this company has not during any other period than that mentioned required a written contract between the dealer and consumer before entering into a specific job contract with the dealer.

[fol. 2678½] No. 13

Practice as to Entering into a Specific Job Contract with the Dealer, Before He Had Sold the Cement to the Consumer

Prior to 1915 this company's contracts usually made no reference to this subject. From January, 1915 to March, 1916, this company's specific job contracts required a formal written contract in every case.

From March, 1916, to January, 1920, the specific job contracts were limited to the cement "the buyer shall furnish or use on the following described work," and since 1920 the company has inserted a provision in its contracts that the buyers "have actual need for or bona fide order or contract binding you to furnish stated quantity of Portland cement for work described."

No. 14

Practice as to Declining to Enter into Specific Job Contracts Before the Construction Work was Ready to Proceed

This company has no record of ever having declined a specific job contract because the plans for the construction work had not been drawn, because the time of completion of the construction work had not been estimated, or because the bids or proposals for the construction work had not been asked for.

[fol. 2679]

No. 15

Practice as to Minimum Quantity to be Sold under a Specific Job Contract

This company has no record of ever having made a specific job contract for less than one carload.

No. 16

Practice as to Permissible Variations in Quantity on Specific Job Contracts

Prior to 1915 this company's specific job contracts were not uniform. Some of them stated the maximum quantity that could be called for; some stated the estimated quantity with no restrictions as to variation, and some were for a definite fixed amount with no provision for variation.

From January 1st, 1915, to July, 1916, the contracts were for an approximate quantity with variation limited to ten per cent more or less.

Since 1916 its specific job contracts have been for the entire and actual quantity used in the particular work with an estimate of the amount to be furnished and no limitations as to variations from the estimate.

No. 17

Practice as to Inserting in Specific Job Contracts a Limitation on Maximum Shipment per Month

This company's specific job contract forms have contained a clause with a space to fill in a stated maximum amount of shipment each [fol. 2679½] month that could be called for in unchanged phraseology since about the beginning of 1915. Prior to that time no regular form was used. In practice this clause is not filled out in many of the specific job contracts the company has executed from 1915 to the present time.

No. 18

Practice as to Requiring a Signed Monthly Report from the Dealer Holding a Specific Job Contract, Showing His Deliveries on the Specific Job

This company has never required a signed monthly statement from the dealer showing deliveries made by him on specific job contracts.

No. 19

Practice as to Making Blanket Contracts

This company has from time to time made blanket contracts with the United States Government, states, counties, municipalities, steam railroads and industrials.

During the year 1915 and up to March, 1916, the execution of a written form of specific job contract was required in nearly every case.

Since March, 1916, the company has quoted for specific job contracts on a printed form containing a place for formal acceptance by the customer, and since that date it has not required the excution of a regular form of contract other than the acceptance of its quotation.

No. 12

Practice as to Requiring a Written Contract Between Dealer and Consumer Before Entering into a Specific Job Contract with the Dealer

From January, 1915, to March, 1916, the company's contract form contained a clause as follows:

"That the buyer has contract duly signed and executed on the —— day of —— ——, with —— ——, contractor, covering the work herein described (for whose benefit this contract is made)."

This provision was abandoned in March, 1916, and this company has not during any other period than that mentioned required a written contract between the dealer and consumer before entering into a specific job contract with the dealer.

[fol. 2678½] No. 13

Practice as to Entering into a Specific Job Contract with the Dealer, Before He Had Sold the Cement to the Consumer

Prior to 1915 this company's contracts usually made no reference to this subject. From January, 1915 to March, 1916, this company's specific job contracts required a formal written contract in every case.

From March, 1916, to January, 1920, the specific job contracts were limited to the cement "the buyer shall furnish or use on the following described work," and since 1920 the company has inserted a provision in its contracts that the buyers "have actual need for or bona fide order or contract binding you to furnish stated quantity of Portland cement for work described."

No. 14

Practice as to Declining to Enter into Specific Job Contracts Before the Construction Work was Ready to Proceed

This company has no record of ever having declined a specific job contract because the plans for the construction work had not been drawn, because the time of completion of the construction work had not been estimated, or because the bids or proposals for the construction work had not been asked for.

[fol. 2679]

No. 15

Practice as to Minimum Quantity to be Sold under a Specific Job Contract

This company has no record of ever having made a specific job contract for less than one carload.

No. 16

Practice as to Permissible Variations in Quantity on Specific Job Contracts

Prior to 1915 this company's specific job contracts were not uniform. Some of them stated the maximum quantity that could be called for; some stated the estimated quantity with no restrictions as to variation, and some were for a definite fixed amount with no provision for variation.

From January 1st, 1915, to July, 1916, the contracts were for an approximate quantity with variation limited to ten per cent more or less.

Since 1916 its specific job contracts have been for the entire and actual quantity used in the particular work with an estimate of the amount to be furnished and no limitations as to variations from the estimate.

No. 17

Practice as to Inserting in Specific Job Contracts a Limitation on Maximum Shipment per Month

This company's specific job contract forms have contained a clause with a space to fill in a stated maximum amount of shipment each [fol. 2679½] month that could be called for in unchanged phraseology since about the beginning of 1915. Prior to that time no regular form was used. In practice this clause is not filled out in many of the specific job contracts the company has executed from 1915 to the present time.

No. 18

Practice as to Requiring a Signed Monthly Report from the Dealer Holding a Specific Job Contract, Showing His Deliveries on the Specific Job

This company has never required a signed monthly statement from the dealer showing deliveries made by him on specific job contracts.

No. 19

Practice as to Making Blanket Contracts

This company has from time to time made blanket contracts with the United States Government, states, counties, municipalities, steam railroads and industrials.

There has been no change in the company's practice in this regard for at least ten years.

[fol. 2680] No. 20

Practice as to Selling Railroads

This company's practice as to sales to railroads has not been uniform. Sometimes it has sold on yearly contract requirements, sometimes for specific amounts of cement to be taken during a definite period, sometimes on blanket contracts up to the maximum limit.

No. 21

Practice as to Selling Industrials

This company's practice in regard to sales to industrials has not been uniform. Sometimes it has sold on yearly contract requirements, sometimes for specific amounts of cement to be taken during a definite period, sometimes direct to dealers on regular dealer terms, sometimes on blanket contracts up to a maximum limit.

No. 22

Practice as to Selling Manufacturers of Concrete Products

This company has sold in every year to concrete products manufacturers at the dealers' price. Its sales have usually been in carload lots, but it has occasionally sold them a specific tonnage for delivery through a definite period at a fixed price.

[fol. 2680½] No. 23

Practice as to the Use of an Order Blank to be Signed by the Customer

This company has used a salesman's order blank since at least as early as 1911. The forms have changed somewhat from time to time. Usually the orders are signed by the salesman and it is not customary to have them signed by the customer.

No. 24

Practice as to a Separate Charge for Bin Tests

This company has made comparatively few contracts which required bin tested cement. Prior to 1916 in some cases it charged five cents a barrel for this service. Since 1916 when a charge has been made it has been at the rate of three cents a barrel.

No. 25

Practice as to Assuming the Expense of Commercial Laboratory Tests.

This company has not made a practice of bearing charges for commercial laboratory tests, but has occasionally done so.

[fol. 2681]

No. 26

Practice as to Repurchase of Cloth Sacks

Prior to 1920 this company sold sacks and repurchased them. Since 1920 it has retained title to the sacks, charging the customer a deposit to insure their return. The general policy of the company is to repurchase or accept the return of only such sacks as are serviceable and can be used again, but the company is not arbitrary, and frequently allows the claims of customers for the return of more serviceable sacks than the company's inspection justifies.

No. 27

Practice as to Quoting Dealers for Shipment to Towns Other than Their Home Towns

This company has always quoted and sold dealers for delivery at towns other than their home towns at the dealers' price.

No. 28

Practice as to Selling at the Dealers' Price to Persons Who Do Not Comply with Following Definition

"A dealer is a merchant, firm, or corporation regularly engaged in selling Portland cement and other building materials pur-
[fol. 2681½] chased by him for resale only, who is also properly equipped with storage facilities, supplied with teams or trucks and is recognized in his home town as a building material dealer."

This company has never limited its sales at the dealers' price to persons confined to this definition.

No. 29

Practice as to a Dealer's Differential in Price

From 1913 to March, 1916, this company usually made a price to dealers five cents a barrel less than to consumers. Since March, 1916, it has usually made this differential ten cents a barrel.

No. 30

Practice as to Payment of Commissions to Dealers on Cement Sold Direct to Consumers

This company has in every year paid some commissions to dealers on cement sold direct to others.

[fol. 2682]

No. 31

Practice as to Giving Special Concessions to Buyers

This company has in every year made special concessions in various forms to buyers to induce sales.

No. 32

Practice as to Mixing Waterproofing Compounds with Cement at the Mills

This company has mixed waterproofing compounds with cement at its mills on request to do so by a customer. It has no record of ever having refused to do this when requested but the requests for this have been infrequent.

No. 33

Practice as to Giving Advance Notice of Change in Price

This company has never given advance notice of price changes.

[fol. 2682½]

No. 34

Practice as to Guaranteeing Sales for Future Delivery Against a Decline in Price

Prior to 1919 none of this company's contracts contained a clause guaranteeing against a decline in price. Since January, 1919, some of its contracts have contained such a clause and others executed at approximately the same date have not contained it.

No. 35

Practice as to Making Efforts to Induce Dealers Not to Resell Below the Consumers' Price

This company has never prescribed or dictated the price at which a dealer should resell its cement, and usually is not aware of the price obtained by the dealer from the buyer or user of the cement.

No. 36

Practice as to Requiring Dealers to State in Their Bids the Name of the Brand on Which They Were Bidding

This company has never required dealers to state in their bids the name of the brand on which they are bidding.

[fol. 2683] No. 37

Practice as to Membership in Dealers' Organizations

This company was a member of the Del-Mar-Col Builders' Material Dealers' Association from 1914 to 1917. It resigned on the latter date and has not been a member of any dealers' association since then.

Examined and found correct.

John J. Porter.

[fol. 2683½] DEF'TS' EX. No. D-5178

Vulcanite Portland Cement Company

Trade Practices Exhibit

Summary of the Files of Invoices, Correspondence and Quotations and the Ledgers and Other Documentary Evidence of Vulcanite Portland Cement Company Showing the Trade Practices of the Company

No. 1

Practice as to Time Limit for Acceptance of Trade Quotations

From as early as April, 1913, to January 1st, 1916, the trade quotations of this company have been for a period of acceptance varying between fifteen and thirty days.

Beginning in January, 1916, the company has quoted for immediate orders only.

[fol. 2684] No. 2

Practice as to Time of Shipment of Trade Orders as Specified in Quotation

During 1914 this company quoted for shipment within a period varying between five and fifteen days. During 1915 and until October of that year the period of limitation for shipment was ten days. From October, 1915, to date the shipping period has been fifteen days.

No. 3

Practice as to Quantity Limit in Trade Quotations

During 1915 and until January 1st, 1916, the company's quotations were limited to three carloads. From January 1, 1916, to date the limit has been one carload, but this restriction is never lived up to.

No. 4

Practice as to Cash Discount

From 1909 to January 21, 1914, this company allowed a cash discount of one cent per barrel for payment in full within ten days from date of invoice.

From January 21, 1914, to November 29, 1915, the discount rate was two cents per barrel.

From November 29, 1915, to July 13, 1920, the discount was five cents per barrel.

[fol. 2684½] From July 14, 1920, to date the discount has been ten tents per barrel.

This company has never insisted strictly upon payment within ten days and there have been instances in every year since 1915 where discount has been allowed upon late payments.

No. 5

Practice as to Selling Cement at a Price Including Packages

This company has never sold cement otherwise than including packages except in cases where cement has been sold in bulk and certain sales to the departments of the Government.

No. 6

Practice as to Dating of Invoices

This company has never dated an invoice other than on the day of shipment.

No. 7

Practice as to Assuming Responsibility for Loss or Damage in Transit

From at least as early as February, 1913, and until May, 1915, this [fol. 2685] company's contracts contained the clause that it would not be responsible for loss incurred during transportation.

From May, 1915, to the beginning of December, 1915, its contracts contained the clause that claims for loss or damage would not be considered unless freight agent's acknowledgment of loss or damage on receipted freight bill and other documents were supplied.

From the beginning of December, 1915, to date the company's contracts have contained the clause that it would not be responsible for shortage or damage occurring in transit.

No. 8

Practice as to Orders Entered for Shipment on a Certain Date

Prior to January 1, 1916, this company did not make it a term of sale that orders would be shipped on the date specified unless sooner ordered out by the purchaser. Since that date the company has made that a term of sale. The company has never enforced this clause and has had no uniform practice in this respect.

No. 9

Practice as to Making Specific Job Quotations in Advance of the Time Bids Are to be Opened

This company has never limited the time for making specific job quotations and has always made them whenever asked for.

[fol. 2685½] No. 10

Practice as to Time Limit for Acceptance of Specific Job Quotations

This company has always, since as early as 1913, quoted on specific job contracts for acceptance within varying limits. It has, however, never enforced this limitation.

No. 11

Practice as to Requiring Execution of Formal Contract After Specific Job Quotations Has Been Accepted

Prior to March 11, 1920, this company's specific job quotations did not provide that when accepted a formal written contract should be executed. Since that date the quotations have carried the provision that acceptance of the quotation if approved by the company would cause it to send a regular form contract for the customer's signature.

No. 12

Practice as to Requiring a Written Contract Between Dealer and Consumer Before Entering Into a Specific Job Contract with the Dealer

This company has never required the dealer to enter into a written contract with the consumer before entering upon a specific job contract with the dealer.

[fol. 2686] No. 13

Practice as to Entering Into a Specific Job Contract with the Dealer Before He Had Sold the Cement to the Consumer

This company has never knowingly entered into a specific job contract with a dealer before the dealer had sold the cement to his customer.

No. 14

Practice as to Declining to Enter Into Specific Job Contracts Before the Construction Work was Ready to Proceed

This company has never declined to enter into specific job contracts because the construction plans had not been drawn or because the time of the completion of the construction work had not been estimated or because bids or proposals for the construction work had not been asked for.

No. 15

Practice as to Minimum Quantity to be Sold under a Specific Job Contract

This company has at various times made specific job contracts for less than one carload.

[fol. 2686½] No. 16

Practice as to Permissible Variations in Quantity on Specific Job Contracts

This company's specific job contracts have been for a stipulated number of barrels estimated as necessary to fill the requirements of the job; for a maximum quantity; for an estimated quantity, being the requirements of the job; for an amount between a minimum and maximum quantity, and also for an amount varying by 10%.

No. 17

Practice as to Inserting in Specific Job Contracts a Limitation on Maximum Shipment per Month

This company's specific job quotations and contracts have always specified a stated maximum amount of shipments per month.

No. 18

Practice as to Requiring a Signed Monthly Report from the Dealer Holding a Specific Job Contract Showing His Deliveries on the Specific Job

This company has never required a signed monthly report from the dealer showing the deliveries on specific job contracts. The

company's contracts never contained any such provision until March [fol. 2687] 11, 1921, and even since that date the provision has never been enforced.

No. 19

Practice as to Making Blanket Contracts

This company has always made blanket contracts.

No. 20

Practice as to Selling Railroads

This company has always sold railroads annual requirement contracts, sometimes at the consumers' price; sometimes at the dealers' price, and sometimes at a special price below the dealers' price.

No. 21

Practice as to Selling Industrials

This company until the beginning of 1918 sold industrials and electric lines for their yearly requirements through dealers. From the beginning of 1918 this practice has been discontinued and since then they have been handled for 15 day delivery or on specific job contracts.

[fol. 2687½] No. 22

Practice as to Selling Manufacturers of Concrete Products

This company has always sold manufacturers of concrete products for extended future delivery, but it has never sold them at the dealers' price except prior to March 1, 1915, when the company used no differential.

No. 23

Practice as to the Use of an Order Blank to be Signed by the Customer

This company has never used a form of order to be signed by the customer.

No. 24

Practice as to a Separate Charge for Bin Tests

This company has always made a bin test charge of from six cents to three cents per barrel, until the beginning of 1920, when it discontinued the practice.

[fol. 2688] No. 25

Practice as to Assuming the Expense of Commercial Laboratory Tests

This company has never borne the expense of commercial laboratory tests.

No. 26

Practice as to Repurchase of Cloth Sacks

This company has repurchased sacks which are not in serviceable condition. The company has at various times purchased sacks from other than the original purchaser.

No. 27

Practice as to Quoting Dealers for Shipment to Towns Other Than Their Home Towns

This company has always in every year since 1914 quoted dealers for shipment to towns other than their home towns at the dealers' price.

No. 28

Practice as to Selling at the Dealers' Price to Persons who do not Comply with Following Definition

"A dealer is a merchant, firm or corporation regularly engaged in selling Portland cement and other building materials purchased by [fol. 2688½] him for resale only, who is also properly equipped with storage facilities, supplied with teams or trucks and is recognized in his home town as a building material dealer."

This company has at various times sold at the dealers' price to persons who do not comply with the definition of a dealer.

No. 29

Practice as to Dealer's Differential in Price

Prior to March 1, 1915, this company used no differential. From March 1, 1915, to December 9, 1916, the differential was five cents per barrel. From December 9, 1916, to date the differential has been 10 cents per barrel.

No. 30

Practice as to Payment of Commissions to Dealers on Cement Sold Direct to Consumers

This company has occasionally paid commissions to dealers on cement sold direct to others.

[fol. 2689]

No. 31

Practice as to Giving Special Concessions to Buyers

This company has never given special concessions to buyers.

No. 32

Practice as to Mixing Waterproofing Compounds with Cement at the Mills

This company has at all times since 1913 mixed waterproofing compounds with cement at its mills, except for brief periods when there was a shortage of labor and supplies.

No. 33

Practice as to Giving Advance Notice of Change in Price

This company has never given advance notice of price change.

No. 34

Practice as to Guaranteeing Sales for Future Delivery Against a Decline in Price

This company had never guaranteed against decline in price until April 2, 1919. From that date until January 19, 1920, its quota-
[fol. 2689½] tions and contracts contained a clause guaranteeing against a decline in price. From January, 1920, until November 9, 1920, no such clause appeared. From November 9, 1920, to date the guaranty clause has been used.

No. 35

Practice as to Making Efforts to Induce Dealers Not to Resell Below the Consumers' Price

This company has never made any effort to induce dealers not to resell below the consumers' price.

No. 36

Practice as to Requiring Dealers to State in Their Bids the Name of the Brand on Which They Were Bidding

This company has never required dealers to state in their bids the brand of cement on which they are bidding.

No. 37

Practice as to Membership in Dealers' Organizations

This company has never been a member of any dealers' organization.

Helen Spitz.

(Here follow Defendants' Exhibits Nos. D-518A, D-518B, D-518C. and D-518D, marked side folio pages 2690, 2691, 2692, and 2693.)

[fols. 2694-2696] DEF'TS' EX. No. D-538

June 3, 1901.

Messrs. Thorn & Hunkins Lime & Cement Co., St. Louis, Mo.

GENTLEMEN: We take pleasure in advising you that our Company has decided to establish a large plant in the West, from which point we believe, we can supply our product to many of our agents on a better basis than we have been able to do from our mills located in Pennsylvania.

We have purchased 1,000 acres of cement land at Hannibal, Mo., and will start at once the erection of a plant there, the capacity of which will equal or exceed 1,000,000 barrels for the first year, and be increased to 2,000,000 the second year. We confidently expect to commence shipping therefrom on or before May, 1902.

In establishing this plant, we desire it to be understood that sales will be made F. O. B. cars destination in all cases, and this policy will also be adopted on sales from our Pennsylvania mills, as rapidly as arrangements can be consum-ated.

Respectfully yours, (Signed) A. De Navarro, Second Vice-President. W.E.M.

[fol. 2696½] DEF'TS' EX. No. D-539

New York, January 24, 1920.

Mr. L. R. Burch:

Referring to your inquiry of me this morning in regard to the reasons which must soon be given for our not taking all contract business which is offered to us or on which we are asked to bid. We want to tell them the truth. I want to be sure that you express the truth correctly, and be very sure that you watch the District Managers to see that all letters convey exactly what you intend they should.

The facts are these: manufacturing conditions are extremely uncertain; stocks of cement are very low; we have booked a reasonable amount of business; other concerns are keeping right on booking it, in spite of the fact that they have sold more than they can deliver,

2693

in my judgment, but they are banking on the likelihood that a good deal of the business that they take cannot be started or finished because of shortage in labor, materials, etc.; we prefer not to accept contracts which we feel there is a serious doubt about our filling on schedule; we think it is the honest thing to do, and in writing to the dealer the thing to bring out to him is, that we have booked a reasonable amount of business, and that amount plus what we must [fol. 2697] make and hold for Atlas dealers' warehouse business is all we can commit ourselves to at the moment; if conditions change, and as they change, we will take on a few more contracts.

If we did not believe in protecting the Atlas dealer for his warehouse business, which we think is very essential to him, then we could go on as some others are doing and take a lot of contracts and squeeze the dealer, but we will not do it.

As to the contractor. The reason we are not accepting all contract business which is offered to us, is for exactly the same reason—namely, we have accepted a reasonable amount, we do not believe it is fair to the contractor to accept his order, as is being done by a good many others, (when if every one got what he thought he was going to get, the other concerns could not manufacture or ship it) and therefore we tell the contractor the facts now instead of at a time when he has made his arrangements to depend on us. It does not mean that you will have to stop taking all business, and of course Atlas customers, our steady trade, is to be preferred at all times; but you will have to use judgment in order to be fair to yourself and to the other fellow.

Yours very truly, J.R.M.

[fol. 2697½] DEF'TS' EX. No. D-540

November 5, 1920.

Mr. M. J. Frostholm, Syracuse, N. Y.

DEAR FROSTHOLM: It will be all right for you to quote on the basis of $4.13 Syracuse to meet the Hudson River competition. You, of course, will not make any change on the Oberdorfer job unless they kick.

Yours very truly, Charles H. Cox.

[fol. 2698] DEF'TS' EX. No. D-541

Mr. E. P. Alker

Dec. 8, 1920.

Mr. H. A. Moore:

We are in receipt of your letter of Dec. 6th and note what you say in regard to prices being quoted by the Lehigh, Hercules, Vulcanite, Dexter, and Allentown Cement Companies. I understand

that at the present time all the cement companies have put in a Universal base of $2.05 per bbl. which of course we will have to follow.

If you hear of any other prices different from the above, I would thank you to advise me.

Yours truly, —— ——, Sales Manager. EPA:MC.

[fol. 2698½] DEF'TS' EX. No. D-542

November 11th, 1920.

Mr. M. J. Frostholm, Syracuse, N. Y.

DEAR FROSTHOLM: Business has fallen off very much all over the country, and you will have to plug for every order you get.

I note that you say that various of the cement companies will take contracts, guaranteeing price against decline. We will include such a clause in our contract if the purchaser so wishes, and you will bear this in mind when talking to prospective buyers.

Yours very truly, Charles H. Cox.

[fol. 2699] DEF'TS' EX. No. D-543

Mr. E. P. Alker

Nov. 6, 1920.

Mr. G. M. Clukas:

We are in receipt of your letter of Nov. 4th and note very carefully what you say in regard to the different prices quoted by various cement companies. You will have to meet conditions as you find them and use the Hudson Base where necessary.

Yours very truly, —— ——, Sales Manager. EPA:MC.

[fol. 2699½] DEF'TS' EX. No. D-544

The H. Wales Lines Co.

Meriden, Conn., December 13, 1920.

The Dexter Portland Cement Co., Nazareth, Pa.

GENTLEMEN: We have your favor of the 9th instant, with which you enclose credit memorandum for difference in price on car shipped to the Westerly Lumber Co. December 1st. We note you state that the present price is $4.11 instead of $4.10, and that the universal freight rate is $1.06. We note that the old universal freight rate was 75¢ per barrel, and 40% added to that would bring it up to $1.05.

Although this is a small matter, we feel that it is necessary to bring to your attention the fact that other cement companies are quoting and shipping at a price based on the freight rate of $1.05, [fol. 2700] and to substantiate this statement we are enclosing copy of a quotation dated December 11, in which the Lehigh Portland Cement Co. quote us as consumers $4.20 per barrel f. o. b. Meriden.

Please give this matter careful attention and advise us at the earliest possible date whether or not we should base our quotation prices on the $1.05 or the $1.06 rate.

Very truly yours, The H. Wales Lines Co., by L. Learmont.

Lehigh Portland Cement Co.

Allentown, Pa., Dec. 11, 1920.

H. Wales Lines Co., Meriden, Conn.:

We take pleasure in quoting you on Lehigh Portland Cement delivered in carload lots F. O. B. cars your station:

In cloth sacks $4.20 per standard barrel including four (4) sacks.

In paper bags seventy (70) cents per barrel less than cloth.

Prices for immediate acceptance.

[fols 2700½-2702] These shipments to be made within fifteen (15) days from date of order.

Quantity not to exceed one car unless otherwise agreed to.

This quotation is subject to change without notice and is not binding until orders have been accepted in writing by this Company.

Prices for specific work, requiring delivery beyond fifteen days, will be quoted upon application accompanied by full information and detailed description of work.

Terms.—On approved credit, net thirty days, or ten cents per barrel discount for payment in full including sacks within ten days from date of invoice.

This quotation is subject to terms, conditions and limitations on both sides hereof.

Yours very truly, Lehigh Portland Cement Co. B. L. Swett, Eastern Sales Manager.

[fol. 2702½] DEF'TS' EX. NO. D-545

12-18-1920.

The H. Wales Lines Co., Meriden, Conn.:

GENTLEMEN: Referring to the freight rate of 75 cents per barrel from the Universal to New England points, we wish to advise that actually figuring the 40% plus war tax, makes the present rate $1.06. However as most of the other companies figure and quote at $1.05 per barrel, it will be in order to abide by $1.05 until a further change is made.

Very truly yours, —— ——, Manager of Sales. HF:C.

[fol. 2703] DEF'TS' EX. NO. D-546

Lehigh Portland Cement Co.

Sales Department, Official Communication

NOTE.—Answers to these questions must be mailed to me Saturday of each week. This is to keep in close touch with conditions in the field.

B. L. Swett, Eastern Sales Manager.

Week ending Saturday, 12/18/20. 191-. Salesman: Henry Office: Buffalo.

1. What information regarding competitors or quotations did you get during the week?
Mr. Drake of the Elmira Bldrs. told me that Atlas & Edison were offering dealers same proposition as the Hercules Co. in regards to contracting for 1921 warehouse requirements. Showed me the Edison form of contract. All competitors active.

2. What special inducement of any nature are competitors offering in your territory?
See above.

3. State what disadvantages, if any, caused by the actions of this company you are laboring under in meeting competition.
None.

4. Give names of competitors' salesmen that you have met during the week and information dropped by them.
None.

[fol. 2703½] 5. Give the complete History of any complaints that you may have on competitors' brands of cement.
None.

6. Are your customers satisfied with our deliveries, packages, handling of complaints sent to us, tracing of cars when requested by them, etc.? If not satisfied give names of dissatisfied customers and state reasons of dissatisfaction.
Those on whom I called all stated that they could have sold more cement this year, but under the circumstances were satisfied that we had done the very best possible for them.

7. What suggestions have you for improving our methods of handling business in your territory?
None at present. Active solicitation of business early in Spring will, I believe, help.

8. Do you know of any contemplated work in your territory that is not followed up by inquiry?
Not at present.

9. What is your opinion as to the outlook for business in your territory during the next thirty days?
Business for next 30 days will not be very good.

10. What seems to be the opinion of the trade on our advertising? How can we improve it?
Pleased. Are especially well satisfied with the dealer calendars.

Remarks: —— ——.

Yours very truly, Geo. M. Henry, Salesman.

[fol. 2704] DEF'TS' EX. No. D-547

Western Union Telegram

Baltimore, Md., 1921, Feb. 3.

Pennsylvania Cement Co., 813 Commercial Building, Philadelphia, Penn.:

Atlas Lehigh three four eight ten cents discount.

Speight.

[fol. 2704½] DEF'TS' EX. No. D-548

Philadelphia Office

February 3, 1921.

Mr. L. R. C. Speights:

I have your telegram of this date, advising me that Atlas and Lehigh are quoting $3.48 per barrel f. o. b. Baltimore su' ject to 10¢ per barrel cash discount. This beats our present price 5¢ per barrel and I am not in a position to tell you that we can meet it at this time.

The best thing to do will be to mark time for two or three days and see what develops in the price situation.

I do not think there is any question that we will be able to meet competition in Baltimore and Washington, but at the present moment, I cannot tell you that our price will be $3.48.

Please give me any further information you are able to find regarding prices made by other Companies, and to whom the prices of the Atlas and Lehigh Companies were given.

Yours very truly, —— ——, District Sales Manager. HAM/ JKS.

[fol. 2705] DEF'TS' EX. No. D-549

Philadelphia Office

February 4, 1921.

Mr. L. R. C. Speights:

You may quote dealers in Baltimore and Washington, for delivery to those two points, $3.48 per barrel, less then cents per barrel for discount, until further notice.

It is not our intention to actively solicit business at this price at the present time, but to take care of anything that may come up either for dealer's warehouse requirements, or for contract, for a reasonable amount, which they may want us to protect.

In cases where the freight absorption would be too great when figuring on the Universal Base of $1.80, I would like to have you take up the question of price with me before naming it, but Baltimore and Washington deliveries at the above price are all right.

Yours very truly, —— ——, District Sales Manager. HAM/JKS.

[fol. 2705½] DEF'TS' EX. No. D-550

The Cumberland Hydraulic Cement & Mfg. Co.

Cumberland, Md.

Jan. 28, 1921.

Lawrence Cement Co., New York City:

We herewith enclose you quotation from the Phœnix Portland Cement Company which shows a reduction in the price of paper bags from 30c. to 25c. This quotation is also made by the Atlas Portland Cement Company, and we presume that it is your desire to quote Dragon in paper on the same basis.

Yours truly, W. L. Sperry, President.

[fol. 2706] DEF'TS' EX. No. D-551

Feb. 8, 1921.

Messrs. Mathesius, Wight, Furbush, Bigbie, Kahn, Thon, Swett:

I was very much encouraged to have Ed. Mathesius telephone into the office before 11 o'clock yesterday morning to the effect that the first two dealers he called on yesterday placed an order with him for immediate shipment, and better still in a sense, was Eddie's advice to the effect that he noted a distinct change in the attitude of the dealers—they seemed to be in a more optimistic frame of mind; more buoyant, and apparently of the opinion that building is about to get started. It was not long thereafter when Hal Swett

telephoned in two cars for immediate shipment to two different customers.

I honestly believe that all that is necessary to get things opened up is a slight impetus to the "ship now" movement, and if the rest of you men find that business in your respective territories is still very quiet, cite these instances of free booking in New Jersey and Long Island as indicating that things are opening up, and that if it [fol. 2706½] is at all possible for the dealers to take in a carload of cement at this time, be sure and take advantage of the opportunity for securing prompt shipment (with price guaranteed against decline up to and including March 31st, 1921) so that they will be sure and have some cement in stock to supply their trade as it is required rather than to hold off until they have an actual demand and then perhaps be confronted by shipping delay, due to the fact that everybody will be wanting cement at the one time.

I have told Mr. Mambert that the New York Division would ship at least 25,000 barrels during the month of February. Up to yesterday, our total was 4502 barrels, which leaves about 20,000 more that you men must produce for us to ship the balance of the month. I therefore want to ask you to put forth extra effort to bring about the desired result. Use the telephone and telegraph freely and pull for every car that you think can be shipped between now and the end of the month.

Raw.

[fol. 2707] DEF'TS' EX. No. D-552

Security Cement & Lime Co.

Inter-Departmental Correspondence, G.S.M.'s Office

Date: 2/2/21.

To Mr. H. S. Rayner.

DEAR HARRY: Answering yours of Jan. 31st and confirming our several 'phone talks.

From prices checked up in Balto., Wash., and Cumberland, the indications are, that the Atlas Co. is making the same delivered price to the dealer in cloth as that made by the Universal—the Atlas, however, giving 10c discount while the Universal gives 5. This means that the Universal base price is the one on which companies are now working and it further means that the dealer who does not discount his bills pays in Balto. and Wash. $3.48 per bbl. If he discounts, Atlas costs him 5c less per bbl. than Universal. Unless we find some contrary information, new quotations on this basis will be sent to all our trade, tomorrow, Thursday. Meanwhile, to all of those whom you can reach you had better give a quotation on this basis.

[fol. 2707½] Glad to know of the progress made with Mr. Staub toward reinstating security in his favor. He certainly has dealt

with us long enough to know how we play and I am hoping that you will impress upon John Kelly the necessity for switching that business to security.

Your comments regarding the Davison Chem. Co. indicate that we may be able to nose in on this. I would ask you to please keep both these subjects before you so that you can hit them from different angles from time to time rather than wait on the dealers to do anything of their own accord.

When will Ober & Sons likely start to order Berkley Hydrate? All orders are a little slow now but I am hoping by everyone of us going after everything possible to make a fair showing for February and March.

Between now and February 15th, please try to get both the National and the Maryland Lime and Cement in a frame of mind to take some cement in some one of their warehouses during February and an additional quantity during March. If we could move a total of 5000 bbls., split up between the two concerns between Feb. 15th and 28th, it would be helpful.

H. B. Warner.

[fol. 2708] DEF'TS' EX. NO. D-553

Pennsylvania Cement Co.

From Philadelphia Office, Inter-Office Letter

To Mr. E. P. Alker. January 28, 1921.

I enclose herewith copy of a letter received from Mr. Marshall today, indicating that other Companies are quoting less than a 10c differential to the D. L. & W. Railroad on their requirements.

While we are quoting the Railroad Companies on a 10c advance above dealers' prices, it is very evident, from Marshall's report, that other Companies are quoting a straight dealer's price to Railroads. [fol. 2708½] I would be glad to hear from you again regarding this class of business.

Yours very truly, H. A. Moore, District Sales Manager.

Mr. E. P. Alker

Jan. 29, 1921.

H. A. Moore:

In reply to your letter of Jan. 28th wish to advise that we will quote the dealer's price to railroads, in order to meet competition.

Yours truly, —— ——, Sales Manager. EPA:MC.

[fol. 2709] DEF'TS' EX. No. D-554

Lehigh Portland Cement Co.

Sales Department, Official Communication

NOTE.—Answers to these questions must be mailed to me Saturday of each week. This is to keep in close touch with conditions in the field.

B. L. Swett, Eastern Sales Manager.

Week ending Saturday, 2/5/21. Salesman: J. L. Hall. Office: Buffalo.

1. What information regarding competitors or quotations did you get during the week?
Edison quoting 5¢ lower in Fonda Penna shipping on low price contract into Schenectady and work is not going ahead at present.

2. What special inducement of any nature are competitors offering in your territory?
None.

3. State what disadvantages, if any, caused by the actions of this company you are laboring under in meeting competition.
None.

[fol. 2709½] 4. Give names of competitors' salesmen that you have met during the week and information dropped by them.
None.

5. Give the complete History of any complaints that you may have on competitors' brands of cement.
Ironclad quoted John P. Dugan, Amsterdam, N. Y. who has the contract for the paving work at Johnstown, N. Y. dealers' price, Dugan handles Ironclad at Amsterdam.

6. Are your customers satisfied with our deliveries, packages, handling of complaints sent to us, tracing of cars when requested by them, etc.? If not satisfied give names of dissatisfied customers and state reason of dissatisfaction.
Guy Park Cement Co. Amsterdam N. Y. complained about the tearing of bags every time a car door was opened.

7. What suggestions have you for improving our methods of handling business in your territory?
None.

8. Do you know of any contemplated work in your territory that is not followed up by inquiry?
No.

9. What is your opinion as to the outlook for business in your territory during the next thirty days?
Quiet.

[fol. 2710] 10. What seems to be the opinion of the trade on our advertising? How can we improve it?

Very well satisfied.

Remarks: ——.

Yours very truly, J. L. Hall, Salesman.

[fol. 2710½] DEF'TS' EX. NO. D-555

Nazareth Cement Company

Nazareth Sales Office

Subject: ——.

February 8, 1921.

John W. Ramsay, Sales Mgr., Boston Office:

The Lehigh Valley price to Warren Bros. Co. delivered Tioga, Mansfield and Lambs Creek, Tioga Co., Pa., is $3.73 made up of $2.10 bulk cement, $1.00 for duck bags and 63¢ for freight. The Universal price to these points is $3.64 made up of $1.90 bulk, $1.00 bags and 74¢ freight. We would, therefore, have to quote the Universal price of $3.64 and absorb the difference or 9¢ per bbl. and which would give us $2.01 for bulk cement.

The Boss says this is O. K. and you can quote them on this basis.

Yours truly, —— ——.

Erie Contractors Supply Co.

Erie, Penna.

Mar. 9, 1921.

Dexter Portland Cement Co., Nazareth, Pa.

DEAR SIR: The Universal, Vulcanite, Alpha, Atlas and Cre-cent cement are all quoting the price of $3.33 per barrel less ten cents per barrel discount if paid within ten days from date of invoice. We wonder whether or not you can meet this price so that we can be in the market for carload lots.

A prompt reply will be appreciated.

Very truly yours, Erie Contractors Supply Co. G. S. Stage, President.

[fol. 2712½] DEF'TS' EX. No. D-559

Mch. 16, 1921.

Erie Contractors Supply Co., Erie, Pa.

GENTLEMEN: Replying to your letter of the 9th inst., we would cheerfully accept order from you for prompt shipment at $3.33 per bbl., less 10c. per bbl., discount if paid within ten days from date of invoice.

Very truly yours, —— ——, Manager of Sales.

[fol. 2713] DEF'TS' EX. No. D-560

Messrs. Bigbie, Furbush, Thon, Kahn, Swett, Wight, Mathesius:

N. Y., March 28, 1921.

Effective immediately we are reducing our cloth sack charge to the basis of forty (40) cents per barrel (ten cents per sack) which means a reduction of sixty (60) cents per barrel in the gross delivered price.

The marking for the ten cent package will be a small script letter "d" following the capital script letter "E" on the reverse of the sack near the neck. This marking will supersede any previous marking on the face of the sack.

Please acknowledge receipt and advise your understanding.

FAS/JN.

[fol. 2713½] DEF'TS' EX. No. D-561

Edison Portland Cement Co.

N. Y. City, March 29, 1921.

DEAR SIR:

Announcing a Reduction in Our Gross Price to You of Sixty Cents (60¢) per Bbl.

Effective today Edison cloth bags will be leased to the purchaser of Edison Cement at the rate of 10¢ each;—that is to say, the bags will be charged at 10¢ and refund made in the same amount, subject to the conditions specified on the back of this letter.

We have also changed the valuation of Edison paper sacks from 25¢ to 15¢ per Barrel. These paper sacks are not redeemable.

On this new cloth and paper sack valuation basis, we quote you — per barrel in cloth bags, f. o. b. cars, your station.

[fols. 2714 & 2715] Shipments in paper sacks, 25¢ per barrel less than price just quoted for shipment in cloth.

This quotation applies on one carload for immediate acceptance and immediate shipment—incidently, we have a large stock of cement on hand, assuring the prompt filling of orders.

Please note that on approved credit, we will allow 10¢ per barrel discount for cash paid within 10 days from date of invoice, or 30 days net.

We believe the above quotation is a particularly favorable one, and urge your taking advantage of the opportunity of securing prompt shipment prior to the demand which we believe will follow in the face of this substantial reduction in gross price just at the beginning of the active building season.

Edison Portland Cement Co.

[fol. 2716] DEF'TS' EX. No. D-562

March 5, 1921.

Alabama Produce Co., Basom, New York.

Attention Mr. W. B. Brigg

GENTLEMEN: Our Mr. Bigbie has written us of the nice visit he had with you, and we are very hopeful that a little later on when

the building busines gets actively under way, we will have the pleasure of supplying at least part of your cement requirements.

We make a specialty of dealer trade business, and having in mind the difficulty experienced last year by the trade in getting cement not previously contracted for, we have evolved a plan of dealer-warehouse requirement protection that has already met with much favor on the part of our dealer friends to whom it has been submitted. Mr. Bigbie doubtless explained this to you, however, I am writing this in confirmation for your further consideration.

The practical working out of this plan, is to give the dealer an [fol. 2716½] option on a certain quantity of cement, to be shipped during specified months of the year, while we on our part are able to gauge the warehouse needs of our customers and can accordingly prepare ourselves by having a sufficient stock on hand to supply their needs.

We appreciate that it is very difficult this early in the year to accurately gauge the demands of your trade after business once gets under way, and we therefore offer you the privilege of the cancellation of any one month's schedule booking if it is found that cement has not moved as quickly as anticipated and you are not in position to take in the schedule car; you are likewise under no obligation to accept the cement if our price is not as low or lower than that of other standard brands. There is therefore no real obligation on your part in executing such dealer-warehouse contract, although, we ask in all fairness to our other customers and ourselves that the dealers to whom this protective measure is submitted, do not subscribe for more cement than they really believe they will be able to take care of. We attach two copies of such dealer-warehouse contract for your further consideration, and if you feel as we do, that by reason of light business at the present time, there is going to be a very heavy demand later on in the season, with very likely the same congestion of orders that existed last year, you may be inclined to protect yourselves for a limited quantity.

I would like very much to see you get started with Edison, if it is only to the extent of one carload, because I believe that we can [fol. 2717] take such good care of you as to warrant a continuance of your business.

We will greatly appreciate it if you will let us hear from you at your convenience. In the meanwhile, remain, with best wishes.

Very truly yours, RAW., Vice-President.

Town—Basom.
County—Genesee.
State—N. Y.
Salesman—W. H. Bigbie.

Dexter Portland Cement Co., Nazareth, Pa.

GENTLEMEN: We are in receipt of letter from the Windsor Cement Co., Inc., of Hartford, Conn., which reads as follows:

"Re Dexter Contracts—Hartford-Conn. Trust Building, Travelers Insurance Co.

We note shipments of cement on above contracts are being billed at twenty-three cents per barrel above the contract price which increase, we understand, is for the increase in freight charges that went into effect after contract was closed.

[fol. 2718] For your information, we have a contract with the Atlas Cement Co. on the above work, and they add only twenty-one cents per barrel for freight increase.

We understand most of the Pennsylvania mills are absorbing the two cents per barrel difference in increase over the Hudson River rates.

Will you kindly take this up with the Dexter Cement Co. and arrange with them to bill on the basis of the Hudson River rate?"

This would also apply to the St. Francis Hospital contract on which we are not shipping two cars per month.

Will you kindly advise what we may say to the Windsor Cement Co. on this matter.

Very truly yours, The H. Wales Lines Co. E. C. W.

[fol. 2718½] DEF'TS' EX. NO. D-564

4-12-1921.

The H. Wales Lines Co., Meriden, Conn.

GENTLEMEN: Referring to yours of the 8th inst., in regard to the price on your contracts at Hartford, Conn., wish to advise that hereafter we will invoice shipments to apply against the contracts in question 2 cents per barrel less than formerly, in order to meet the Hudson River price.

Thanking you for calling this matter to our attention, we are,
Very truly yours, —— ——, Manager of Sales. HY:C.

[fol. 2719] DEF'TS' EX. NO. D-565

April 9, 1921.

DEAR MR. WHITE: Referring to your letter of March 29th, with regard to the Dalton situation, while it is expected that each salesman will handle his territory to best advantage and as long as the territory is properly covered, we will be satisfied, nevertheless I find by examining your daily reports that you were in the vicinity of Dalton on several occasions between February first and March 4th and as there is a street car line to Dalton, it would seem that you could have easily visited that point at an earlier date.

I note the result of your visit to Dalton and it would seem as though very little was accomplished. Certainly, with the facts you have in hand with respect to Crane & Company, it would seem as though you should be able to either convince Mr. Adams that he should use Knickerbocker or secure some other dealer. I believe if the situation is strongly presented to Mr. Adams that he could be persuaded to handle Knickerbocker and if he declined to do so and there is no other dealer to be secured at Dalton, then I may be able through Mr. Winthrop Crane or Mr. Daniels to have Knickerbocker absolutely specified for the work of Crane & Company and [fol. 2719½] this would probably have considerable influence with Mr. Adams.

There also may be other mills in the locality of Dalton who on account of friendship for myself or Mr. Daniels could be persuaded to specify Knickerbocker and I think if the matter is handled properly, we can secure the necessary co-operation from the local Dalton dealers.

I am rather afraid that you are not persistent enough in your efforts to place our cement and while I do not wish to criticize unnecessarily, the fact remains that out of thirty new dealers secured this year, you have added only one in your territory. I hope that your efforts to secure new dealers will meet with better results in the next thirty days.

Very truly yours, —— ——, President. ADN:W.

Knickerbocker Portland Cement Company, Inc.

New York, N. Y.

May 5, 1921.

Mr. W. M. Floring, Assistant to the President, Sales Dept., Knickerbocker Portland Cement Company, Inc., New York City.

MY DEAR MR. FLORING: Upon looking over our list of dealers I find that we only have eight in the State of Vermont.

I would suggest that this State be given special attention.

Yours very truly, A. D. Naylor, President.

[fol. 2720½] DEF'TS' EX. No. D-567

May 5, 1921.

MY DEAR MR. STINSON: Upon looking over our list of dealers, I find that we only have eight in the State of New Hampshire. I also find that we did not ship a single barrel into New Hampshire during April this year. It looks as though we would have to give this State some very special attention.

Yours very truly, A. D. Naylor, President.

Copy to Mr. Floring.

[fol. 2721] DEF'TS' EX. No. D-568

Alpha Portland Cement Company

Easton, Pa., December 9, 1920.

Mr. J. J. Collister, T. M. Atlas Portland Cement Co., New York City.

DEAR SIR: We wish to call your attention to Me. C. tariff I. C. C. C-2971 which names proportional class rates between Brunswick, Me., and points on the Maine Central Railroad. On page 2 of this tariff under the heading of "Application of rates" we read as follows: "Rates specified herein are proportional rates to be used only where no through rates are in effect and will not apply on traffic destined to or originating at points beyond (West of Brunswick, Me.) in States of Maine, New Hampshire, Rhode Island and Connecticut, or on traffic routed via coastwise steamer lines."

We interpret this to mean that you cannot use the Brunswick combination where you have a through rate on cement over Portland as published in their tariff I. C. C. C-3313. For an example we will figure the rate to Hersey's, Me. We contend that the rate of [fol. 2721½] $8.20 which is made up over Portland, a combination of two Cement rates, is the only lawful rate to apply even though the Brunswick combination which is made up of a cement and class rate figures lower.

We contend that the words "through rate" as used in the above rule by the Maine Central Railroad means the Portland rate to point of destination and does not mean necessarily the rate from point of shipment, that is L. V. of Hudson region, to ultimate destination on the Maine Central Railroad which in this case is Hersey's. We base our argument on the fact that the Maine Central have repeatedly said that they want their full rate from Portland and we believe they mean by this their full cement rate.

We will appreciate it very much if you will look into this matter and advise us fully your views. We would also call your attention to the fact that Me. C. tariff I. C. C. C-3253, maning proportional class rates between Milford, Oakland and Washington Junction and Stations on the Maine Central Railroad cannot be used for the reason that on page two under "Rules governing tariff" "application of Rates" appears the clause "Rates specified herein apply only as proportional rates on traffic originating at or destined to points west of the Niagara frontier from or to which no through rates are in effect." This will result in our being obliged to use the Cement rates shown in I. C. C. C-3313 or the proportional Class rates if cheaper shown in I. C. C. C-2971, provided it is determined that the latter tariff can be used.

[fol. 2722] I would further call your attention to the fact that the proportional class tariff from Brunswick, I. C. C. C-2971, has a clause to the effect that whenever a carload commodity rate is established it removes the application of the class rate to or from the same points on that commodity. This would further seem to carry out our contention that the Brunswick proportional class tariff is not the proper tariff to use in figuring rates on cement to points on the Maine Central Railroad in view of the fact that a cement tariff is in effect from Portland to practically all points on the Maine Central Railroad.

Please advise.

Very truly yours C. N. Apgar, Traffic Manager. K.

[fol. 2722½] DEF'T'S EX. NO. D-569

Alpha Portland Cement Company

Easton, Pa.

Dec. 16, 1920.

J. J. Collister, T. M. Atlas Portland Cement Co., 30 Broad St., New York, N. Y.

DEAR SIR: Your letter of Dec. 13th, file X 60-28. We have had considerable discussion in our office regarding the use of the Brunswick Tariff. The writer practically agrees with the argument submitted by you except that in view of the fact that the rules covering the tariff are technical, there is still some question in my mind as to whether, strictly speaking, the rates could be used either east or west of Brunswick in preference to the through commodity rate. I

base my argument on the fact that Tariff Circular 18-A provides that where commodity rates are established they remove the application of the class rate.

It is true there are no commodity rates in effect from Brunswick but in view of the fact that there are commodity rates in effect from Portland to practically all points on the Maine Central, I believe, if [fol. 2723] the Maine Central would care to do so they could insist on such rates being used in handling cement shipment. We have partially cleared up the matter by having wired them whether they would protect the Brunswick combination to Hersey's, Me., and they advised us they would. The question now in our minds is what portion of the Maine Central Railroad can be determined as being east and west of Portland. If you draw a line north and south through Brunswick you will find that the branch running up to Farmington is west of this line, while the rates at the present time from the L. V. Region have been checked in to points on this line by the use of Brunswick combination. I believe this is in violation of the rules governing the tariffs and that the only rates which are applicable on cement shipments to points on the Maine Central in the territory west of the line drawn north and south through Brunswick is the cement rates applicable from Portland. Of course, this brings up the question of what rates are applicable on the line from Leeds Junction to Oakland due to the fact that the north and south line through Brunswick cuts this branch at about Winthrope. It is hardly possible that Leeds Junction to Winthrope could be considered west and Winthrope to Oakland considered east.

The Lehigh Company has taken the matter up with the Maine Central Railroad to get an interpretation of that part of the Brunswick Tariff which refers to restrictions against the use of rates to points beyond Brunswick in the State of Maine.

[fol. 2723½] I would be glad to have you study the tariff carefully and advise us fully how you interpret this clause to read. The fact that the L. & N. E. class rate tariff says that rates to points on the Maine Central Railroad are to be made on the Brunswick combination where no through rates are in effect, has no bearing whatever on this subject. I have had the matter up with the tariff bureau of the L. & N. E. Railroad in an endeavor to find out from them under what authority they made reference to the Brunswick combination in their tariff and they state it is a heirloom, having been carried from time to time for years, and they do not know today whether it is right or wrong. After reading over the rules governing the application of rates, their opinion is that due to cement rates being in effect from Portland, the Brunswick combination could not be used. Further than this, I do not see that Morris has anything to do with this question because the Brunswick class rate tariff is not subject to the use of Morris' insofar as class rates are concerned. In fact, I find the reissues of the Maine Central Tariff which have just been received, cancels the combination clause, making it necessary to use full advanced rates.

I would thank you to advise us promptly regarding the several points which are brought up, and oblige.

Yours truly, C. N. Apgar, Traffic Manager. C/R.

[fol. 2724] DEF'TS' EX. No. D-570

Copy to Mr. W. F. Clark, T. M. Lehigh Portland Cement Co., Allentown, Pa.

Dec. 13, 1920.

Mr. C. N. Apgar, T. M. Alpha Portland Cement Co., Easton, Pa.

DEAR SIR: Replying to yours of the 9th inst., in reference to using the proportional class rates shown in Me. I. C. C. C 2971 (Now superseded by I. C. C. C 3454 effective Jan. 1st, 1920.) The only restriction we see in using this tariff in making combination rates is, from Brunswick to points west of Brunswick and to points in New Hampshire, Rhode Island and Connecticut and via coastwise steamer liner; and we interpret the clause "Rates specified herein are proportional rates to be used where no through rates are in effect" as meaning no thru rate from originating point, and can be used if the combination makes a lower rate than if via some other junction even though there may be a commodity rate in effect from some other junction.

[fol. 2724½] We take the stand that Brunswick is as much of a basing point as Portland, see L. & N. E. Class Rate Tariff I. C. C. A 3926 which shows under Rate Groups covering nearly all stations on pages 9-10-11 and 12 the following "No joint Rates" based on Brunswick, Me.

From Hudson the Boston & Albany and New York Central Tariffs both publish thru rate to Brunswick, Me. and we have used some for basing point for years and the rates were protected. Can find nothing in Morris 228 which would lead us to believe that we would be compelled to use a combination of commodity rates from one junction if we could make a lower rate on some other junction base, on combination of a class and commodity rate.

In regard to Maine Central Tariff I. C. C. C 3253 proportional class rate from Milfore, Oakland and Washington Junction to M. C. points, we agree with you that same cannot be used except from or to points west of Niagara Frontier.

Regarding last paragraph in your letter relative to the clause in I. C. C. C 2971 to the effect "that whenever a carload commodity rate is established it removes the application of the class rate to or from the point on that commodity." This would refer to the station from which tariff applies and not to any other station. As there are no commodity rates on cement from Brunswick it would be perfetly proper to use the class rates in making a thru combination rate.

Yours truly, —— ——, The Atlas Portland Cement Company. EEW/FD.

[fol. 2725] DEF'TS' EX. No. D-571

Lehigh Portland Cement Co.

Alentown, Pa., Dec. 14, 1920.

Mr. J. J. Collister, T. M. Atlas Portland Cement Co., 30 Broad Street, New York City.

DEAR SIR: In reply to your letter of December 11, File X 60-28, in regard to rate to Princeton, Me. We agree with you with the exception of the rate from Alsen. The New Brunswick tariff names a rate of 20¢ per hundred pounds from Brunswick to Princeton. This would make the rate from Alsen to Princeton $8.34 instead of $8.44.

We expect to have a list of points affected by this tariff ready to send to you tomorrow for your information in checking.

Yours very truly, W. F. Clark, Traffic Manager.

[fol. 2725½] DEF'TS' EX. No. D-572

December 21, 1920.

Mr. C. N. Apgar, T. M. Alpha Portland Cement Company, Easton, Pa.

DEAR SIR: Replying to yours of the 16th inst., regarding the use of the Brunswick Tariff in making combination rates to points on the Maine Central. We are still of the opinion that same can be used in preference to the Portland Combination, if lower rate can be made on Brunswick. In reference to the clause of the above tariff regarding points "West of Brunswick," this is open to various interpretations and would say that same applies to all points west of Brunswick to Portland and west of Auburn to Portland and points west to Lime Ridge, Quebec, inclusive or it may mean that it only applies to the points on the line between Brunswick and Portland and points west of Portland.

We do not think that his clause means to run a straight line north and include points west of same. We will await the decision received by the Lehigh, kindly advise us as soon as received. We have [fol. 2726] just received the new Rumford tariff. The combination clause has been eliminated and no doubt the Portland Tariff etc., will also be reissued in the near future. We have had the Maine rates retyped on the figures agreed upon and think it will be well to check same when we check the New York State book. Do you not think so? As the matter now stands we will have to mark time on the New England books until the Maine Central, New Jersey Central, Bangor & Aroostook Etc., reissued their tariffs and we have not changed the rates caused by the reissued of the L. & N. E. tariffs, as

we might as well hold it up and make one correction to cover when the balance of the new tariffs have been received, Kindly advise,

Yours truly, The Atlas Portland Cement Company, by ——
——, Traffic Manager. EEW/BR.

c/o Mr. W. F. Clark, T. M. Lehigh Portland Cement Co., Allentown, Pa.

[fol. 2726½] DEF'TS' EX. No. D-573

Alpha Portland Cement Company

Easton, Pa., Dec. 23, 1920.

J. J. Collister, T. M. Atlas Portland Cement Company, 30 Broad St., New York, N. Y.

DEAR SIR: Yours of Dec. 21st, file X 60-27. I really do not see what bearing the reference West of Brunswick has to points West of Auburn and Lime Ridge. However, this matter seems to be one that we cannot agree upon and, until such time as the Lehigh Company hears from the Maine Central, nothing can be done.

We are making changes in our working book as the tariffs are received so that when the whole question is decided it will take us but a very few minutes to check such rates as have been changed since the check in New York. It seems to us that just as soon as the Brunswick situation is lined up and, provided the Portland Tariff is not changed by the elimination of the combination clause, we should go ahead and have New England printed.

[fol. 2727] We understand that the Central R.R. will not be able to distribute their cement tariff compiled on the 100 lb. basis until about the first of March. Further than this, there is at least one tariff applying out of Universal which must be changed to the 100 lb. basis and we do not know just what date it will become effective. If we were to hold up the printing until all these changes are made in the various tariffs which are now on the per ton basis, our books will not be printed before the 15th of March. This will be agreeable to us provided it is to the other companies.

Yours truly, C. N. Apgar, Traffic Manager.

[fol. 2727½] DEF'TS' EX. No. D-574

Dec. 30, 1920.

Mr. W. F. Clark, T. M. Lehigh Portland Cement Co., Allentown, Pa.

DEAR SIR: Your letter of December 28th received.

We agree to rates as shown by you to points in Maine with the following exception. From Hudson, New York, to Barkers, Me., we check a rate of $7.00 made up as follows:

Hudson to Portland	$4.06	
Portland to Barkers	3.40	
Total	7.46	
Less	.50	a ton as per Morris 228
	$7.00	through rate.

[fol. 2728] From Hudson, New York to Laings Pit, Me. we check a rate of $7.40 a ton made up as follows:

From Hudson to Portland	$4.10	
Portland to Laings Pit	3.80	
	7.90	
Less	.50	as per Morris 228.
	$7.40	through rate.

From Hudson, New York to Sunkhaze, Me. $7.00 made up as follows:

Hudson to Portland	$4.10	
Portland to Sunkhaze	3.40	
Total	7.50	
Less	.50	as per Morris 228.
	$7.00	through rate.

From Lehigh Valley to Conants, Davis, Lancaster and Woolen Mills, Me. $7.00. These stations being intermediate to Pea Cove, Me., as per Central Railroad ICC G 644.

Yours very truly, The Atlas Portland Cement Company, by ——— ———, Traffic Manager. AFB/EMS.

[fol. 2728½] DEF'TS' EX. No. D-575

Lehigh Portland Cement Company

Allentown, Pa., December 28, 1920.

Mr. J. J. Collister, T. M. Atlas Portland Cement Co., 30 Broad Street, New York City, N. Y.

DEAR SIR: Referring to the new Maine Book which I forwarded you yesterday: This morning I discovered that the rate from Hudson to Laings Pit is shown thereon as $6.70 or $1.31 per barrel. This should be $6.90 or $1.35 per barrel.

The rate to Woolen Mills from the Lehigh District is shown as $7.48 or 1.46 per barrel, whereas it should be $7.70 or $1.51 per barrel.

Will you kindly make the necessary corrections, obliging

Yours very truly, W. F. Clark, Traffic Manager.

[fol. 2729] DEF'T'S EX. NO. D-576

Alpha Portland Cement Company

Easton, Pa., Jan. 3, 1921.

J. J. Collister, Traffic Mgr. Atlas Portland Cement Co., 30 Broad Street, New York, N. Y.

DEAR SIR: Yours of Dec. 29th, file X 60-14, regarding checking of the New York State Freight Rate Book.

We have advised Mr. Clark that we will be able to check on Wednesday, January 5th. We have the New York and New Jersey Freight Rate Books completed and they can be checked at that time.

We understand that the questions which were brought up about rates in Maine have been about decided. The only matter now which is not entirely decided is the date that the application of Morris' tariff will be restored. If this is going to be done so as to become effective within a month from now, I believe, it might be well to check in the rates on the new basis. The Lehigh Company [fol. 2729½] has taken up regarding the matter and they, undoubtedly, will know definitely by the middle of this week so that possibly the state of Maine can be cleaned up and sent along the same time that New York and New Jersey are completed.

Yours truly, C. N. Apgar, Traffic Manager.

[fol. 2730] DEF'TS' EX. NO. D-577

January 4, 1921.

Mr. W. F. Clark, T. M. Lehigh Portland Cement Co., Allentown, Pa.

DEAR SIR: Referring to your letter of the 31st ultimo, file Q-48-Maine. We have corrected our Maine list of rates on Barkers, Laings Pit and Sunkhaze to read $6.70, $6.90 and $6.70 respectively.

On again reviewing the Central Railroad tariff applicable to points on the B. & A., we agree with you that we cannot apply the Pea Cove rates to Conants, Davis, Lancaster and Woolen Mills.

Yours truly, The Atlas Portland Cement Company, by ——
——, Traffic Manager. EEW/BR.

c/c Mr. C. N. Apgar, T. M. Alpha Portland Cement Co., Easton, Pa.

[fol. 2730½] DEF'TS' EX. NO. D-578

Lehigh Portland Cement Company

Allentown, Pa., December 31, 1920.

Mr. J J. Collister, T. M. Atlas Portland Cement Co., 30 Broad Street, New York City, N. Y.

DEAR SIR: Replying to yours of the 30th, file X-68-14 wherein you acknowledge mine of the 28th:

Rates to the following points are found in Maine Central R. R. tariff I. C. C. C-3193 from Hudson, N. Y.:

Barkers	$6.70
Laings Pit	6.90
Sunkhaze	6.70

If you will again review the C. R. R. of N. J. tariff applicable to points on the B. & A., I think you will agree with me that you cannot apply the Pea Cove rates to Conants, Davis, Lancaster and Wooden Mills under the present intermediate clause. Mr. Apgar also concurs in my interpretation of this tariff.

Yours very truly, W. F. Clark, Traffic Manager.

[fol. 2731] DEF'TS' EX. NO. D-579

August 12, 1921.

Personal.

Mr. G. M. Crosland, Chief Section of Tariffs, Interstate Commerce Commission, Washington, D. C.

DEAR MR. CROSLAND: Inasmuch as I am having an argument as to the proper through rate to apply to a through shipment of cement from our mill at Ormrod, Pa. to Rangeley, Me. located on the Sandy River & Rangeley Lakes R. R., will you do me the kindness to review the following and let me have your opinion whether official or unofficial in the premises.

In the first place there are no through rates, class or commodity, from Ormrod, Pa. to Rangeley, Me.

The combination on Portland, Me. is as follows:

Ormrod, Pa., to Portland, Me., 23¢ cwt.—Page 43, L. V. R. R. I. C. C. C-7244.

Portland to Rangeley, Me., 42¢ cwt.—(Sixth class.) Page 11, Me. C. I. C. C. C-3414.

Through rate, 65¢ cwt.

[fol. 2731½] The triple combination on Brunswick, Me. and Farmington, Me. is as follows:

Ormrod, Pa., to Brunswick, Me., 25¢ cwt.—Page 11, L. V. R. R. I. C. C. C-7244.

Brunswick to Farmington, Me., 4¢ cwt.—(Sixth class.) Page 7, Me. C. I. C. C. C-3454.

Transfer at Farmington, Me., 4¢ cwt.—S. R. & R. L. I. C. C. 164.

Farmington to Rangeley, Me., 24¢ cwt.—(Sixth class.) Page 2, S. R. & R. L. I. C. C. 176.

Through rate, 58¢ cwt.

I have taken the position that inasmuch as there are no through rates from Ormrod, Pa. to Rangeley, Me. and no specific manner of constructing a combination rate is prescribed that if a shipment is routed by us from Ormrod, Pa. to Rangeley, Me. via the Lehigh Valley-Boston & Maine to Portland, Maine Central to Brunswick, Maine Central to Farmington c/o Sandy River & Rangeley Lakes R. R., the through rate of 58¢ would be correctly applicable. On the other hand it is argued that because there is a through rate from Portland to Rangeley, Me. that that fact would require the use of the Portland combination precluding the use of the triple combination on Brunswick and Farmington. It is also argued that because the through rate from Portland to Rangeley is also applicable from Brunswick that it is improper to use from Brunswick to Rangeley the combination on Farmington. This would be very true if we [fol. 2732] were figuring on a shipment from Brunswick to Rangeley, but I do not believe that it would eliminate the application of the triple combination on Brunswick and Farmington on a through shipment from Ormrod, Pa. to Rangeley, Me. Inasmuch as all of the tariffs in question are on file with the Commission, I cannot see where we are confined to the Portland combination.

With kind personal regards and hoping to see you in Washington shortly, I am,

Yours very truly, —— ——, Traffic Manager. ER.

[fol. 2732½] DEF'TS' EX. NO. D-580

Interstate Commerce Commission

Washington, August 13, 1921.

Mr. W. F. Clark, Traffic Manager Lehigh Portland Cement Company, Allentown, Pa.

DEAR SIR: I have yours of the 12th inst. file B-311-108-AW relative to Cement Rates, Ormrod, Pa. to Rangeley, Me.

Assuming that your statement of the rates is correct and that there are no through rates, nor specific manner of constructing the com- [fol. 2733] bination rate, provided in the tariffs your view of the applicable through combination rate is correct. In support of this conclusion I quote you rule 5 (c) of Tariff Circular 18-A:

"If no specific rates from point of origin to destination of a through shipment is provided, and no specific manner of constructing combination rate for it is prescribed, the lowest combination of rates applicable via the route over which the shipment moves is the lawful rate for that shipment."

The Commission has passed upon situations of the kind presented in your letter and in every instance, so far as I am aware, have decided that the lowest combination over the route of movement is the applicable through rate.

Yours truly, G. M. Crosland, Chief Section Tariffs.

Copy E. E. Wolfe.
9/7/21.

[fol. 2733½] DEF'TS' EX. No. D-581

August 16, 1921.

Mr. C. N. Apgar, T. M. Alpha Portland Cement Co., Easton, Pa.

DEAR SIR: For your information I attach copy of my note of the 12th inst. to Mr. Crosland of the Interstate Commerce Commission and copy of his reply.

Yours very truly, —— ——, Traffic Manager. MR.

[fol. 2734] DEF'TS' EX. No. D-582

August 19, 1921.

Mr. C. N. Apgar, T. M. Alpha Portland Cement Co., Easton, Pa.

DEAR SIR: I have noted yours of August 18, relative to cement rates from the Lehigh District to Rangeley, Me., and also that you have written the Maine Central in regard to the matter.

I put the matter up squarely to the Commission and it seems to me that the Commission's Ruling should be sufficient for you.

Yours very truly, —— ——, Traffic Manager. J. G.

Mr. Paulson, Washington:

Please read the attached file and discuss it with Mr. Crosland? The contention of the Alpha is that because the Portland rate also applies as a through rate from Brunswick that it is not in order to use the combination on Farmington from Brunswick to destination.

W. F. C.

Did not see Crossland, but you are OK.

Edison Portland Cement Co.

New York City, September 16, 1919.

Mr. Robert Cope, Sales Manager Allentown Portland Cement Company, Allentown, Pennsylvania.

DEAR SIR: Attached find acknowledgment of your telephone order of this morning, which I believe contains the salient points we discussed.

I think it would be better if you will telephone or deliver to Mr. A. H. Moses, Assistant Works Manager, your detailed shipping instructions.

It is my understanding you will have your sacks put in at the mill tomorrow, so that if our car supply is adequate, we can start for you on Thursday.

As explained to you, our car supply has been most uncertain and most provoking this month, but we will hope for improvement.

You can rest assured we will do our very best to execute this order [fol. 2735½] as nearly as possible according to your desire.

Yours very truly, H. M. Scott, Vice-President and General Sales Manager.

[fol. 2743½] DEF'TS' EX. NO. D-588

Bath Portland Cement Co.

New York City, July 18, 1918.

Mr. F. B. Franks, 1st Vice-President, Bath, Penna.

DEAR SIR: We have sold to the Dexter Portland Cement Company, five thousand (5,000) barrels of cement at $1.50 bulk f. o. b. our mills, packed in their bags and they will send the bags to the plant tomorrow.

In placing this order they have requested me to send them the bin number from which each car is loaded and our laboratory test on the bin. They say they have some essential work where these tests are required and it is important that they have them.

Yours very truly, J. F. Twamley, Second Vice-President.

cc. to Phila. office.

[fol. 2744] DEF'TS' EX. NO. D-589

Bath Portland Cement Co.

New York City, July 22, 1918.

Mr. F. B. Franks, 1st Vice-President, Bath, Penna.

DEAR SIR: We have sold the Dexter Portland Cement Company an additional 5,000 barrels, making a total of 10,000 barrels and they have asked if we will pack a little cement for them in paper bags. I told them that we did not want to pack any cement in open mouth paper bags as our packers objected to handling these packages, but that if they furnished us with Bates Valve paper bags, I thought there would be no difficulty in accommodating them.

Yours very truly, J. F. Twamley, Second Vice-President.

[fol. 2744½] DEF'TS' EX. NO. D-590

The Allentown Portland Cement Co.

Allentown, Pennsylvania, December 22, 1919.

Mr. C. H. Breerwood, President Acme Cement Corporation, 134 South 46th Street, Philadelphia, Penna.

MY DEAR MR. BREERWOOD: Confirming our conversation of today, we are placing order with your Company for the purchase of one hundred thousand barrels (100,000) of your cement to be delivered in approximately equal monthly shipments between April 1, 1920, and December 1, 1920.

This cement to be shipped in the bags of this Company which we are to forward to your plant, and to be shipped to points designated by us, we to pay you One Dollar Sixty Cents ($1.60) per barrel for this cement, F. O. B. cars or barge, subject to a discount of 5¢ per barrel for payment within ten days from date of invoice, you to guarantee the cement to pass the Standard Specifications. It is [fol. 2745] understood that you are to use your best efforts to make use of the present loading system, and to make such shipments as we request, by barge when possible to do so.

Very truly yours, Allentown Portland Cement Company, R. S. Weaver, Secretary and Treasurer.

[fol. 2745½] DEF'TS' EX. NO. D-591

Acme Cement Corporation

Catskill, N. Y., December 23, 1919.

Allentown Portland Cement Co., Allentown, Pa.

GENTLEMEN: We have to acknowledge receipt of your favor of December 22nd, in which you place with us an order for 100,000 barrels of Portland cement. This order is accepted in accordance with the terms and conditions named in your letter, subject only, however, to the following qualifications. We understood that you would in each case discount your bills by a payment within ten days from date of invoice upon an allowance of 5 cents per barrel. You do not definitely state in your order that this will be done in each case. Will you kindly write us a letter clearing up this point [fol. 2746] so that we may regard the contract for 100,000 barrels definitely closed.

It is understood, of course, as we stated to your Mr. Weaver, that the performance of the agreement is subject to unusual contingencies, such as fire, strikes, accidents, inability to obtain transportation, and other causes beyond our control.

Very truly yours, Acme Cement Corporation, C. H. Breerwood, President.

[fol. 2746½] DEF'TS' EX. NO. D-592

Acme Cement Corporation

Catskill, N. Y., August 4, 1920.

Mr. J. W. Fuller, Pres. Allentown Portland Cement Co., Allentown, Pa.

DEAR COLONEL FULLER: I have your favor of August 2nd, and I am very sorry you did not let Cope get in touch with me to find out why we were not shipping you, before writing your letter, as then I am sure you would have had no cause for complaint.

The facts of the matter are these: from Wednesday, July 28th up until today, August 4th, we have just received five cars, (even though we have a standing order for five cars a day) and you got [fol. 2747] one of these cars Monday, and are getting one today. We are informed by the West Shore Railroad Co. that they have been ordered to forward all empty box cars West for grain, and do not know when they can give us more cars. So you see you are more than getting your proportion, and when I stated to Cope that I thought I could give you two cars, it was of course dependent upon our getting the cars.

The only cement Waldo Bros. & Bond Co. are getting of any consequence is shipped to them by water, and the cement is trucked from our plant six miles to Catskill, and loaded on barges, at that point, and they are doing the trucking at their expense. If it were not for this method of shipping, we would be obliged to close our plant down. As it is, the cement is piling up on us and have had about $100,000 tied up in cement and clinker, which is about all I can finance, and I would like to state that the arrangement we have with Waldo Bros. & Bond Co. was made prior to the time of making the contract with you.

It seems that just as soon as we commence to get any kind of a supply of box cars, the Railroads leading into the New England States place embargoes on, and we are not able to ship. We have had cases where we have had four or five cars loaded in the yard, embargos were placed and we have to send the cement up to Catskill at a loss of $1.20 a ton.

If you will write to the West Shore Railroad Co., Alsen, N. Y., they will confirm the fact that we have only received five cars in [fol. 2747½] the last seven days, and that we have a standing order with them for five cars a day, which will increase when we get on an average of five cars a day, and I not only have no objection to your sending a representative here to check up these facts, but would prefer that you do so, as it would eliminate any cause for misunderstanding.

I more than appreciate your raising the price of the contract, which is of considerable help, but I have just gotten out my July costs and find that we are losing at least 80 cents a barrel at the new price of $2.15 net. This is caused by our having to go out in the open market and pay from $15 to $17 a ton for coal delivered, and also to our

restricted production, due to the lack of transportation. If we ever have to depend on the Railroads entirely I do not believe we could run more than a week, and if you knew all that I have to contend with I believe you would feel like quitting unil conditions got somewhere near normal. It does seem a pity that cement manufacturers have to sell cement at $2.15 or even $2.60, when the same dealers, who are getting it, turn around and sell it for $6.50 and $7 a barrel.

Nevertheless, we will do the very best we can for you an- no matter what happens, you will certainly get a square deal, and if at any time you do not feel that you are getting it, send Cope up to see me and let him stay long enough to find out all that is going on.

[fol. 2748] If you handle the matter in this way, I am sure you will have no cause for complaint.

Yours truly, Acme Cement Corporation. C. H. Breerwood, President.

[fol. 2748½] DEF'TS' EX. NO. D-593

August 28, 1919.

Mr. B. L. Swett, Sales Manager Lehigh Portland Cement Company, Allentown, Pa.

MY DEAR SIR: I confirm our telephonic conversation of this morning offering to furnish you 100,000 barrels Knickerbocker cement at $1.65 per barrel, f. o. b. cars at our mill, net cash in thirty days.

Mr. Naylor has just informed me upon my return to the office that during my absence, you telephoned him your acceptance of this offer, stating that you would see him tomorrow in regard to shipping instructions, furnishing your bags, etc.

Thanking you for this order which will have our very best attention, I remain,

Very truly yours, —— ——, President. ABD:GH.

P. S.—The above for prompt shipment.

[fol. 2749] DEF'TS' EX. NO. D-594

Lehigh Portland Cement Co

Allentown, Pa., August 28, 1919.

Knickerbocker Portland Cement Co., 30 East 42nd St., New York, N. Y.

GENTLEMEN: Following our telephone conversation this morning, this memorandum is submitted to cover the purchase by your Company from you of 100,000 barrels Knickerbocker Portland Cement under the following terms and conditions.

Price.—Price shall be $1.65 per barrel net exclusive of cost of package, but including cost of packing cement into our bags and placing it f. o. b. cars your tracks Hudson, N. Y.

Terms.—Terms Net cash, we to pay invoices within ten (10) days of dates of presentation.

Delivery.—It is understood that you agree to furnish the entire quantity of 100,000 barrels beginning not later than September 1st, 1919, and completing delivery not later than September 30th, [fol. 2749½] 1919, and that you will make shipments of approximately 4,000 barrels per day. In the event of your inability to ship, due to a shortage of cars or the occurrence of a railroad strike during the month of September, it is understood that our company has the option of either taking delivery subsequent to September 30th, 1919, or else leaving on your hands such cement as you have been unable to furnish prior to September 30th.

Manner of Shipments.—It is understood that you will undertake to make shipments of the cement under this order to such customers and destinations, and in such manner and quantities as we may direct, and that you will arrange to issue billing on such shipments on Lehigh Portland Cement Company bills of lading, which we will furnish you, the name of the Knickerbocker Portland Cement Company not to appear in any way to the consignee receiving the cement.

Package.—It is understood that you will make shipments in sacks (either cloth or paper) bearing Lehigh brand which we will furnish you for the purpose, and that we will undertake to deliver the empty sacks f. o. b. your mill in time to permit you to make deliveries as agreed above. It is further understood that no shipments are to be made except in bags so furnished you.

Notice of Shipment.—It is understood that you will mail to us on the day of shipment bills of lading in duplicate on each carload shipped under this order and that you will promptly follow these papers by invoices to cover. It is also understood that you will, if desired, furnish us with daily telephone information as to the car number of shipments made on that day.

[fol. 2750] Tests.—It is understood that cement which you will furnish us under this order is guaranteed to conform in all respects to the present specifications of the American Society for Testing Materials, and that you agree, upon request, to furnish us with copies of your mill test reports on any of the cars shipped under the order.

If the above agrees with your understanding, please let us have your word of acknowledgment.

Yours truly, Lehigh Portland Cement Company. B. L. Swett. Eastern Sales Manager.

[fol. 2750½] DEF'TS' EX. No. D-595

Lehigh Portland Cement Co.

Allentown, Pa., August 30, 1919.

Knickerbocker Portland Cement Co., New York City.

Attention Mr. Floring

GENTLEMEN: Following this morning's telephone conversation, we are enclosing our orders No. 1 to 32 inclusive, omitting No. 4.

Please make shipment of these cars in the order in which they are numbered, beginning with No. 1.

As explained in our conversation, the steamboat "Perkins" left Jersey City at noon today for your plant, and will deliver to you 35,000 cloth Lehigh sacks to be used in making shipments for us. We hope that it will be possible for you to start shipments on the enclosed orders by Tuesday, the 2d.

The "Perkins" is to return to Jersey City loaded with cement to her capacity of about 750 barrels. We would like, if possible, to have the enclosed carload orders shipped before the "Perkins" is loaded and are willing to have the boat lay over for a few days. Of [fol. 2751] course, should there be any difficulty in securing cars, you can go ahead on loading the "Perkins" immediately.

For the present, please bill the shipments out on plain bills of lading in the name of the Lehigh Portland Cement Company as shipper, sending to this office bills of lading in duplicate on each shipment. We will furnish you within a few days a supply of printed bills of lading.

We will appreciate if you will telephone us each day the car numbers of that day's shipments, or if you will set an hour, we shall be glad to call you for the information daily.

If there are any points not entirely clear in connection with any of the orders, please call on us.

Yours very truly, Lehigh Portland Cement Company. J. Bowen.

[fol. 2751½] DEF'TS' EX. No. D-596

Lehigh Portland Cement Co.

Allentown, Pa., September 12, 1919.

Mr. A. B. Daniels, Pres. Knickerbocker Portland Cement Co., 30 E. 42nd St., New York City, N. Y.

DEAR SIR: Referring to your letter of the 3rd and our several conversations pertaining to our order placed with you for 100,000 barrels of cement, would say that our original desire was to purchase the cement for delivery prior to October 1st, 1919. You will appre-

ciate, of course, that deliveries much later than this would not be of very great service in meeting the present situation.

We recognize the difficulties under which you have been working for the first ten days of the month because of the shortage of cars, and are willing to accept a portion of the order later than October 1st, provided that reasonably heavy shipments are made during September to meet existing conditions.

I am therefore writing to amend our letter of August 28th by [fol. 2752] saying that if delivery of 75,000 barrels is made during September, we will then be willing to accept delivery of the remaining 25,000 barrels during October.

I hope that this arrangement is acceptable, and will appreciate your word.

Yours truly, B. L. Swett, Eastern Sales Manager.

[fol. 2752½] DEF'TS' EX. NO. D-597

October 2, 1919.

Mr. B. L. Swett, Eastern Sales Manager Lehigh Portland Cement Company, Allentown, Pa.

DEAR SIR: Referring to your letter of September 24th which has not been answered earlier on account of my absence from the office.

We were not able to ship as many barrels on your order last month as hoped for due to the failure of your company to keep us fully supplied with sacks. However, we succeeded in forwarding 51,000 barrels and we will fill the balance of the order, forwarding daily as many barrels as possible, but it will be necessary for you to keep us well supplied with sacks. Mr. Floring now has the matter up with your representative here in New York and as I understand it, quite a supply of sacks will reach the mill within the next few days.

Sometime ago in discussing the matter with me, you intimated that you might desire to increase this order and I would like to have you advise at this time as to your desires in connection therewith. Will you kindly let me hear from you at your early convenience?

Very truly yours, —— ——, Treasurer. ADN:GH.

[fol. 2753] DEF'TS' EX. NO. D-598

Lehigh Portland Cement Co.

October 16, 1919.

Mr. A. D. Naylor, Treas. Knickerbocker Portland Cement Co., 30 East 42nd St., New York, N. Y.

MY DEAR SIR: As explained to Mr. Floring yesterday, unfortunately the bottom has fallen out of everything throughout the Middle

West and our business slacked off so that we are amply able to take care of what little business comes in to us ourselves. I can't understand this, as I have been very optimistic as to the demand for the next thirty days and feel that it is on account of the weather conditions alone which has been the cause of our orders falling off.

Under the circumstances, however, you can readily understand that we cannot see our way clear to increase our original order at this time. If it has been the weather conditions that has brought about this change, no doubt if we do get some good weather the latter part of the month, we can give you some day to day business.

When I am in New York next week I will go into this matter further.

Yours truly, B. L. Swett, Eastern Sales Manager.

[fol. 2753½] DEF'TS' EX. NO. D-599

January 9, 1920.

Sorco Pipe & Supply Company, P. O. Box 974, Johnstown, Penna.

Attention Mr. H. B. Toomey

GENTLEMEN: We thank you for your inquiry of January 8th for price on 12,000 bbls. Giant Portland Cement F. O. B. Windber. Penna. for use in bidding on State Highway work—R-222 Richland and Stonycreek Twps.

We regret to advise, however, that just at this time we are not quoting on any cement for future shipment, owing to the uncertain coal situation and general unsettled conditions, but this may only be for a short time, and therefore trust you will advise us from time to time regarding any inquiries that you may have on which you desire price, and upon hearing from you will be very glad indeed to communicate with you further.

We would say, however, that we are in position to take care of any current orders for prompt shipment, and shall be very glad to serve you.

Appreciating your inquiry, and trusting you will understand our position, we remain,

Yours very truly, —— ——, General Sales Manager. N.

[fol. 2754] DEF'TS' EX. NO. D-600

February 2, 1920.

The Clarksburg Coal Sales Co., Clarksburg, W. Va.

GENTLEMEN: I am in receipt of your favor of the 30th ult., and I must admit, the situation as explained in your letter, looks very blue.

I, however, am expecting you to stick by me and please "Don't give up the Ship". Our situation at New Village is so very serious, due to the very large confiscations by Fuel Administrators and the various common carriers, that we have been working at only about 70% capacity for the last thirty days.

I want to assure you, that the writer will be under heavy obligations to you for any and all assistance you can render. Once you lay your hands on a car, ship it to the order of the Edison Portland Cement Company and I assure you, you will have every opportunity to continue shipping us Coal during 1920.

"A friend in need is a friend indeed", and I am relying on your best cooperation to help me out of the very serious situation we now face.

Yours very truly, —— ——, Asst. Secretary. AHM:CB.

[fol. 2754½] DEF'TS' EX. NO. D-601

The Clarksburg Coal Sales Co.

Clarksburg, W. Va., January 30th, 1920.

Edison Portland Cement Co., New Village, N. J.

GENTLEMEN: We are in receipt of your wire of this advising, "our coal suitation serious, advise what we can expect".

We can advise that you will be fortunate to receive any coal as the car supply is the worst we have experienced in this region for years, we had seventeen cars at one of the mines we represent for the entire week, the weekly rateing of this mine is 48 cars, this week the same mine has had 13 cars, you can readily see the car situation is bad.

We are haveing considerable trouble in buying coal for line shipment as the export coal is bringing a much better price and consequently the loose tonnage is attracted by the better price, we have shipped you all the slack from a mine we have been selling the output of and will try to pick up any outside coal we can, we can not give you any thing definite however but will do our best.

Very truly yours, Clarksburg Coal Sales Co.

[fol. 2755] DEF'TS' EX. NO. D-602

February 4, 1920.

Mr. Benjamin Bissell, Century Coal Co., Baltimore, Md.

DEAR MR. BISSELL: I am in receipt of your favor of the 31st ult., report on the "Northern West Virginia Coal Operators' Association."

I have been so busy trying to get sufficient Coal to operate our plant at New Village, that you must pardon me for not sending you a few lines ere this.

I have been passing through one of the most difficult manufacturing periods I have ever experienced in my twenty-two years of business life, and I am candid when I state, that War Condition Times were not even a parallel to the present situation. Known confiscations on Coal shipped to our plant in January amounted to 125 cars, and there are probably 25 to 30 more doubtful cars on my shipments that are evidently confiscated.

At 7 A:M this morning, I had just enough coal to last until 2 P:M.

I assure you my condition is so serious that it is a problem whether we can operate from day to day. I am relying on your usual best cooperation and consideration to help me with every car possible.

Yours very truly, —— ——, Asst. Secretary. AHM:CB.

GENTLEMEN: Please do everything possible to help us out with a few cars of Coal on our order No. 70279, given you on March 16th.

Our Coal situation is again becoming very serious, and any help you are able to give the writer, at the present time, will without doubt, receive our best co-operation, when conditions again become normal.

May I depend on your co-operation and consideration? A wire or telephone call on the subject matter will be greatly appreciated.

Thanking you for past favors.

Yours very truly, —— ——, Asst. Secretary. AHM:CB.

[fol. 2758½] DEF'TS' EX. NO. D-609

February 19, 1920.

Philadelphia & Reading R. R. Co., Mr. O. W. Stager, Supt. of Transportation, Reading Terminal, Philadelphia, Pa.

DEAR SIR: We respectfully request that the following cars of coal recently shipped to us, be allowed to come through:

Shipped Feb. 12th by Operators' Fuel Agency, cars NW 35076, E.23304, P&R 406717.

Shipped Feb. 16th by Operators' Fuel Agency, cars E 42066, PMcK&Y 60244, LS&MS 49368.

Shipped Feb. 16th by Operators' Fuel Agency, cars N&W 57005, PL 722004, PL 800639.

Shipped Feb. 16th by Madeira, Hill & Co., cars C&O 30853, B&O 237557.

Shipped Feb. 13th by H. H. Lineaweaver & Co., cars LV 17246.

Shipped Feb. 14th by H. H. Lineaweaver & Co., cars L&N 85139.

Shipped Feb. 16th by H. H. Lineaweaver & Co., cars 921669 (PL).

[fol. 2759] We have been having a considerable number of cars diverted from us and unless this coal is allowed to come through to us, we will be at the point of closing down our mill.

The above cars are consigned to us at Egypt, Lehigh Co., Pa.-Iron-ton R. R. delivery.

Yours very truly, Giant Portland Cement Company. ——
——, Secretary.

[fol. 2759½] DEF'TS' EX. NO. D-610

Security Cement and Lime Co.

Hagerstown, Md., February 21st, 1920.

An Important Bulletin

Three serious restrictions have affected the box car situation since the first of the year.

1. Early in January only 50% of the actual box car requirements were given to shippers;

2. From February 7th to 10th no shipments were permitted to points East. This embargo was lifted on the 10th but again,

3. Was effective from February 17th to 21st.

The theory is, that this will prevent shortage of cars later on, but the fact is, that practically every cement plant in the country has orders for immediate shipment just as soon as the snow is off the ground and the further fact is, that road contractors all over the Country are now piling stone on the site of the proposed work and have orders in for immediate and continued prompt shipments [fol. 2760] during the year. You can thus see that this car shortage is with us to stay.

We are avoiding large contracts, so that we will have cement for you for your trade which we want to help you to hold. But, if you do not start right now to make room for a supply—get your order in now so that we can ship it promptly—it will be difficult to get cars and you will be working from hand to mouth all during 1920.

Please give this your serious consideration and help us to help you.

Security Cement & Lime Company. HBW/T.

[fol. 2760½] DEF'TS' EX. NO. D-611

February 23, 1920.

American Hardware & Equipment Co., Charlotte, N. C.

GENTLEMEN: We are in receipt of your telegram and regret that, owing to car shortage and an accumulation of orders, we are unable to quote you on 2,000 bbls., shipments to start the first of March at the rate of one car per week.

Our contract obligations are such that, until conditions become more settled, we feel compelled to go slow in accepting further orders for immediate shipment, therefore can not see our way clear to quote on the 2,000 bbls. referred to in your telegram.

We thank you for the opportunity offered us of quoting you and trust that you appreciate our position in the matter.

Yours very truly, Giant Portland Cement Company. ——

Phœnix Portland Cement Co.

[fol. 2761½] DEF'TS' EX. NO. D-613

The J. E. Long Coal Company

Clarksburg, W. Va.

March 1, 1920.

Penn Allen Cement Co., Allentown, Penna.

GENTLEMEN: We have yours of the 28th quoting letter of the 23d which did not reach us until Friday last, asking that we resume shipments at the rate of one car per day until further notice and we wired you this morning as per attached copy.

You are doubtless familiar with the very serious situation relative to the car supply in this region. It is almost impossible to get any coal forward, particularly coal consigned to cement companies as same [fol. 2762] is being diverted as rapidly as the railroads can get hold of it. The railroads are demanding 100 per cent on their fuel requirements and when they are not getting sufficient they are con-

fiscating coal necessary, particularly that of cement companies. What little spot coal is in the market is being eagerly sought after by people claiming to have export and Canadian business and they are offering fancy premiums for same.

We will, however, do the best we can for you and get as much coal forward for you as is possible.

Very truly yours, The J. E. Long Coal Co. J. Edgar Long, President.

[fol. 2762½] DEF'TS' EX. NO. D-614

March 3, 1920.

Mr. W. P. Rogers, Springer & Rogers, 112 South Broadway, New Philadelphia, Ohio.

DEAR SIR: Yours of March 1st to hand, we will send calendars to the parties mentioned.

In regard to cement for the Wise-McClung Co.'s building, we regret exceedingly to advise that owing to our present contract obligations it will be impossible to quote you a price on Giant for this work, as with the contracts now on hand we have apparently all the contract cement we can handle this year, and have therefore discontinued quoting on any additional contract cement for future shipment.

We assure you we regret very much indeed we cannot name you price for this job, but feel that it is better to try and take care of the contracts we now have on our books rather than take on further contracts and disappoint our customers when shipments are called [fol. 2763] for, and as you have contracts with us we know you will appreciate our position.

We can, however, take care of current carload business, and are sending you herewith a revised quotation.

At the present time we are experiencing considerable trouble in securing cars besides the embargoes placed by the railroads, and if you need any cement for stock would request that you give us as much notice as possible of your requirements, as we are trying to treat all of our friends fairly by shipping in rotation as orders are received.

With kind regards, we remain,

Yours very truly, —— ——, General Sales Manager. SNP-N. Enc.

Copy to Norfolk.

March 18, 1920.

Mr. Wm. C. Mallonee, Robert G. Lassiter & Company, Arcade Building, Norfolk, Virginia.

DEAR SIR: Replying to your telegram of the 17th inst., we wired you as per attached confirmation.

We appreciate fully your position and are exceedingly sorry for the unavoidable delay in shipments, but this is due absolutely to the car shortage. We have the cement on hand and would be only too glad to ship it out if we could get the cars, and if Mr. Ashburner can arrange to secure cars for us, we assure you we will greatly appreciate it and would be glad if he will advise how many cars he can arrange to have furnished to us.

We are constantly in touch with our connecting lines endeavoring to get cars, but are only receiving about 25% of our supply daily, and with the large number of orders ahead of your weekly order received March 4th, we cannot make very much headway with the [fol. 2766½] small number of cars we received daily. We will however make a special effort to get two cars moving to you tomorrow.

We are having the Pennsylvania R. R. trace the two cars shipped March 10th, and two cars shipped March 15th. They advise that car AT&SF 39229, shipped March 10th, left Delmar March 16th for Cape Charles on Engine #6334, and we trust you have now received this car. We will keep after the other cars.

Assuring you we will do our best to help you, we remain

Ohio Coal & Supply Co., Cleveland, Ohio.

GENTLEMEN: Replying to your telegram of this date, we wired you as follows:

"Cannot ship Geneva for two or three weeks."

We then received your telegram requesting whether we will ship four cars to Geneva in three weeks; we then replied as follows:

"Will endeavor to ship one car Geneva within three weeks. Can make no promises regarding balance until railroad situation is improved."

In reference to this matter of shipment, would say that the situation has become so acute as regards our supply of empty cars that we find it necessary to make no further promises whatever. We are getting further back in our shipments every day, and there is no use of us making a promise until the present situation changes for the better. We are going to do the very best we can by our trade, and that is all we can promise.

[fol. 2774½] Our present price on Bath Portland Cement is $3.54 per barrel in cloth sacks, carload lots, f. o. b. cars Geneva, Ohio; the price in paper sacks is 70¢ per barrel less. We would prefer to make shipment in paper if same could be handled that way.

This price we cannot guarantee, and is subject to change without notice. Of course, any orders on file at this price, and should there be an advance before shipment you would be notified before shipment is made. The quotation is also subject to all the terms and conditions stated on the back of this sheet.

We are indeed sorry that we cannot offer you anything more favorable, but you will realize beyond a doubt that the trouble is entirely due to the railroad situation and is no fault of ours, as we have a large stock of cement which we would like to move; in fact, will have to move it very shortly or else close down on account of not having sufficient storage space to keep running.

Very truly yours, Bath Portland Cement Co. —— ——,
Second Vice President. WGD/H.

[fol. 2775] DEF'TS' EX. NO. D-636

May 22, 1920.

Mr. Louis Rafetto, President Bath Portland Cement Company, Finance Building, Philadelphia, Pa.

DEAR SIR: Unless there is a decided improvement in the car supply for shipment during the coming week, we find it will be necessary, owing to the accumulation of stock, to curtail our production. We have decided during the month of June to operate only four kilns.

Will you please ship during the said period 2,500 tons of Gas and 2,000 tons of Steam Coal to cover our requirements.

Thanking you for your prompt attention in this matter.

Very truly yours —— ——, First Vice President. FBF/J.

[fol. 2775½] DEF'TS' EX. NO. D-637

Alpha Portland Cement Company

Easton, Pa.

Plenty of Cement—No Cars

It seems desirable that the following facts should be brought to the attention of our customers, in view of the delay on our part in making shipment of orders:

1. We have plenty of cement in our stock houses at this time. In fact we have more than twice as much on hand now as we had at this time a year ago.

2. We have not received anything like the number of empty cars needed to ship the orders we have received for the past two months. The car supply is not sufficient in quantity and is very irregular. We have received almost no cars the past week.

3. Many of the orders which we have on file are for destinations for which railroads will not accept loaded cars.

4. Because of the above, we are forced to the following policy:

First. As previously advised, all quotations are withdrawn.

Second. Until further notice, we will not make any obligations for future shipments.

[fol. 2776-2778] Third. Until further notice, we will not accept additional orders from our customers.

Finally, you can be of great assistance in helping us to overcome the car shortage, if you will get in communication with your local Chamber of Commerce, Board of Trade, Rotary Club, Kiwanis Club, or any other influential organization or person in your community, and get them to wire and write the Interstate Commerce Commission, Washington, D. C., explaining the imperative need for building material in your community and urging the adoption of such rules and regulations as will insure a sufficient supply of box cars to the Cement Manufacturer.

Alpha Portland Cement Company.

May 24, 1920.

The Atlas Portland Cement Co.

Philadelphia

For the attention of Mr. D. H. MacFarland.

Philadelphia, 10/20/16.

With reference to phone conversation of even date The Maryland Lime & Cement Co. of this city rec'd a quotation today from The Lehigh Port Cement Co. quoting price of $1.80 per Bbl. in Cloth Bags, F. O. B. cars Balto. Md. Above information from a very reliable source.

Yours very truly, L. V. Costello.

[fol. 2836½] DEF'TS' EX. NO. D-645

The Atlas Portland Cement Co.

New York

For the attention of Mr. C. A. Kimball.
(Copy to Mr. MacFarland.)

New York, October 20, 1916.

Messrs. Rafael del Castillo & Co., advised me at 2:30 P. M. today that the Lehigh Portland Cement Company had quoted them price of $1.57 per barrel f. o. b. cars Jersey City, and $1.70 per barrel delivered alongside steamer New York Harbor.

Yours very truly, A. L. Stark.

[fol. 2837] DEF'TS' EX. NO. D-646

October 20, 1916.

Superseding general price memorandum of April 5th, the prices for your territory, effective today, are as follows:

Westchester & Putnam Counties, N. Y.; Long Island, N. Y. (from Northampton); Connecticut (West of the Connecticut River), $1.15 in bulk Noh. or $1.25 in bulk Hudson.

Prices for Staten Island points where delivery by water can be made, are to be $1.77 per barrel delivered f. o. b. cars same as price for water delivery with a minimum of $1.10 Northampton.

Prices for delivery by water, New York Harbor, within lighterage limits to be $1.77 per bbl. alongside, subject to water delivery schedule dated August 19, 1915—in 1,000 barrel lots.

Prices for delivery alongside Staten Island to be $1.77 per barrel delivered in 1,000 barrel lots.

Prices for delivery alongside or f. o. b. cars Hudson River points from Spuyten Duyvil north to be $1.77 per barrel delivered—shipment from Hudson.

[fol. 2837½] Before quoting for delivery by truck, bring up for consideration.

For extended delivery other than New York City, $1.15 in bulk Northampton, or $1.25 in bulk Hudson.

For extended delivery in New York City, bring up all inquiries for special consideration.

For all points where there are two or more railroad deliveries taking different freight rates, prices based on the lowest freight rate shall be quoted for all deliveries, provided a bulk of not less than $1.05 Northampton or $1.15 Hudson, can be protected in making the delivery taking the highest rate.

Freight shall be figured at 380 lbs. on cement in bags and 400 lbs. in cooperage; fractions less than one-half cent (½c) to be dropped and one cent (1c) added for fractions of one-half cent (½c) or more.

Freight rates used in making rail prices are to be those shown in printed Association books.

For packages add to bulk price 40c per bbl. if packed in cloth, 10c per bbl. in cooperage, 12c per bbl. in paper.

Cloth bags are redeemable at 10c each.

Quotations to others than dealers and U. S. Government to be 5c per bbl. higher than dealer's price.

Kindly issue quotations today to all concerns at these prices, for prompt acceptance, and shipment within fifteen (15) days after date of order.

Yours very truly, C. A. K.

[fol. 2838] DEF'TS' EX. No. D-647

October 20, 1916.

The Atlas Portland Cement Co., Boston, Mass.:

Confirming telephone instructions today, prices to dealers in your territory, effective immediately, are to be figured on basis of $1.15 bulk Northampton or $1.25 bulk Hudson. Prices to all others to be 5c per barrel higher except that dealers' prices may be quoted to the U. S. Government.

Quotations are to be issued today to concerns on your mailing list, for prompt acceptance and shipment within 15 days after date of order.

These prices effective until further notice.

Yours very truly, —— ——. SAP-MW.

DEF'TS' EX. No. D-648

The Atlas Portland Cement Co.

New York

Memorandum

Nov. 13, 1916.

Philadelphia office told me over phone today that Robert Patterson Sons, dealers in Philadelphia, had received Lehigh quotation dated Nov. 11th, advancing their price 10c.

L. G. M.

[fol. 2839] DEF'TS' EX. NO. D-649

Telegram

Boston, Mass., 10:29 A. M., Nov. 13, 1916.

Atlas Portland Cement Co., 30 Broad Street, New York:

Kimball Lehigh quotations dated November eleventh issued from Penna office fifteen days shipment immediate acceptance are based on claw Boston confirmed by us at three different points as being centaury per bbl advance paper bags cephalopod per bbl less.

The Atlas Portland Cement Co.

NOTE.—Centaury=10c; Cephalopod=25c.

[fol. 2839½] DEF'TS' EX. NO. D-650

Boston Office, Nov. 13, 1916.

Confirming advice given you over phone today—your prices effective today are advanced 10c per barrel, making your basing prices to dealers $1.35 Hudson—$1.25 Northampton—the usual differential being observed when quotations are issued to contractors or consumers. Any prices made for delivery by water are also advanced 10c per barrel. A full issue of dealers' quotations are to be sent out to all territory affected by this change in price.

As verbally instructed, we do not want to extend any quotations at the old price, or actively solicit any business on outstanding quotations, which are to be revised to the new basis as soon as they have expired. In issuing quotations for extended delivery on the new basis, the time for acceptance is to be kept down to the minimum—not to exceed 5 days where contract is awarded—and 7 days for figuring purposes, unless there are some special cases where a trade position warrants giving a quotation for figuring beyond 7 days, when the quotation may be issued for a period not exceeding 15 days. Please do not issue any quotations for large quantities without first taking the matter up.

[fol. 2840] This increase of 10¢ per barrel also automatically increases your Stockton Springs base. However, we do not want any quotations made on basis of Stockton Springs, on quantities of any size, where the actual shipments would net us less than $1.15 Northampton—$1.25 Hudson, unless there are some very exceptional reasons for doing this, and in these cases we would like to have each one taken up before we are committed. In any event, we do not want to make these absorptions on basis of Stockton Springs, on any sizeable quantities, unless there is some real trade position involved.

Effective at once, your paper price is also advanced 13¢ per barrel—now making the price for shipment in paper 25¢ per barrel less than the price in cloth; in other words, you are to figure the

value of the paper package at 15¢ per barrel in building up prices, instead of 12¢ as heretofore.

Yours very truly, —— ——. FBM-MH.

Jan. 12, 1917.

To Mr. L. E. Browning, 436 Potomac Ave., Buffalo, N. Y.:

Effective immediately dollar thirty five Lehigh Valley, dollar forty five Hudson, Universal unchanged.

Lehigh Portland Cement Co.

[fol. 2841½] DEF'TS' EX. NO. D-653

January 15, 1917.

Superseding price memoranda of Nov. 13th and 23rd—prices for your territory, effective today, are as follows:

Vermont	$1.35	bulk Noh. or $1.45 bulk Hudson.
New York (except Putnam and Westchester Counties, New York City and Long Island).	$1.35	bulk Noh/ or $1.45 bulk Hud.
	$1.35	bulk Universal, Pa., subject to min. of $1.00 Noh/ or $1.10 Hud.
	$1.45	bulk Catskill (the largest difference we will have to absorb is 18¢ per barrel).
	$1.55	bulk Hud. for points on the Albany Southern R. R. in small lots. Points on the Hudson River to be quoted f. o. b. cars same price as established price for delivery by water except where the rail price figures lower.
[fol. 2842] New Jersey	$1.35	bulk Northampton.
Pennsylvania (west of and including McKean, Cameron, Clearfield, Blair and Bedford Counties).	$1.35	bulk Northampton.
	$1.35	bulk Universal, Pa., min. of 1.00 Noh.
	$1.45	bulk Union Bridge, Md., Min. 1.00 Noh.
West Virginia	$1.45	bulk Fordwick, Va., min. 1.00 Noh.
		Minimum freight rate from Universal to Pittsburgh and Allegheny, or other points takin- rate of 60¢ per ton or less will be 11¢ per bbl.
		See paragraph at end of memorandum regarding prices to consumers, etc.
Texas	$2.00	in cloth f. o. b. dock Houston Texas and Galveston, Tex. for local consumption.
	$2.15	in cloth f. o. b. dock Beaumont, Port Arthur, Orange. Prices to others than dealers, 10¢ higher than to dealers.

North Carolina, Virginia.....	$1.70	bulk Washington, Newbern, Elizabeth City, Edenton, Belhaven, Hartford, Morehead City, Beaufort and
[fol. 2842½]		points similarly situated, subject to min. of 95¢ bulk Noh.—for local use.
	$1.35	bulk Noh.
	$1.70	bulk Wilmington, N. C.
	$1.40	bulk Kingsport—min .95 Noh.
	$1.40	bulk Richard City, min .95 Noh.
	$1.35	bulk Univ. min. $1.00 Noh.
	$1.45	bulk Fordwick or Union Bridge min. 1.00 Noh.
South Carolina, Georgia.....	$1.70	bulk Charleston, S. C., Brunswick, Ga., Savannah, Ga.
	$1.40	bulk Richard City or Kingsport, subject to min. .95¢ Noh.
	$1.45	bulk Fordwick or Union Bridge, subject to min. 1.00.
Florida	$1.70	bulk Jacksonville, Fla.
	$2.35	in cloth Key West for local use.
	$1.40	bulk Richard City or Kingsport, Min/ 95 Noh.
[fol. 2843]		To points where freight rate of $1.00 per ton from Jacksonville to Tampa plus rate from Tampa to destination is less than through rate from Jacksonville to destination, the combination rate is used in figuring prices.

Water prices to be quoted in accordance with freight schedule dated August 19th, 1915.

Freight rates used in making prices are to be those printed in Association books for such territory that these books cover.

Freight shall be figured at 380 pounds per barrel on cement in bags and 400 pounds per barrel in cooperage; fractions of less than one-half cent to be dropped and one cent added from fractions of one-half cent or more.

For packages add to bulk 40¢ per barrel if packed in cloth, 45¢ per barrel in cooperage, and 15¢ per barrel in paper.

Cloth bags redeemable at 10¢ each.

For points where there are two or more railroad deliveries taking different freight rates, prices figured on lower rate shall be quoted

for all deliveries provided we do not reduce our established mill base more than 10¢ per barrel in so doing.

Quotations to dealers in Erie, Crawford, Mercer, Venango, Lawrence, Butler, Clarion, Armstrong, Beaver, Allegheny, Westmoreland, Washington, Fayette and Greene Counties in Pennsylvania, and Hancock, Brooks, Ohio, Marshall, Wetzel, Tyler, Pleasants, Wood, [fol. 2843½] Jackson, Mason, Cable and Wayne Counties in West Virginia, for delivery outside their recognized home town, are to be 10¢ per barrel over the local dealer's price.

Quotations to contractors and owners to be 10¢ per barrel higher than dealer's prices.

Take up for special authority inquiries for railroad work.

Kindly issue quotations today to all concerns, except the South at these prices, for prompt acceptance, and shipment within fifteen (15) days after date of order.

Yours very truly —— ——. SAP-GED.

[fol. 2844] DEF'TS' EX. NO. D-654

The Atlas Portland Cement Co.

Philadelphia

For the attention of Mr. L. G. McConnell, New York City.

Philadelphia, January 16, 1917.

We issued quotations last night to all dealers in territory covered by this office, increasing our old price 10¢ per barrel. The present bases on which we are quoting, are as follows:

$1.35.....Lehigh Valley.
$1.45.....Union Bridge.
$1.45.....Fordwick.

We did not say anything in our quotations about the increase in the cost of wooden package, as we have very few cases where prices are wanted in wood, and they are all on direct inquiries.

[fol. 2844½] As I told you when you were in the office here yesterday, we have a number of jobs on which we have quoted on the old base, and where our quotations are about to expire or have expired.

In accordance with the general talk we had with you about these quotations, we will follow them up on the old basis, for a period not exceeding fifteen days in any case, and, where it is possible. we will handle these by direct solicitation of salesmen, but there may be some cases where we will have to make our extension in writing, and we will do this when it is considered advisable, although there should not be very many of these cases.

Yours very truly, F. B. McKenna. FBM-FCC.

Lehigh Portland Cement Co.

Sales Department, Official Communication

NOTE.—Answers to these questions must be mailed to me Saturday of each week. This is to keep in close touch with conditions in the field.

B. L. Swett, Eastern Sales Manager.

Week ending Saturday, Feb. 24, 1917. Salesman: H. A. Swett. Office· Allentown.

1. What information regarding competitors or quotations did you get during the week?
All Companies quoting 1.35 Mill.

2. What special inducement of any nature are competitors offering in your territory?
Abrew & Cooper, Elizabeth, N. J., closed with Bath 1,000 bbls. at 1.25 Mill price on Standard Elec. Co. job with Solomon & Son, Arlington, N. J., Contrs.

3. State what disadvantages, if any, caused by the actions of this company you are laboring under in meeting competition.
None.

4. Give names of competitors' salesmen that you have met during the week and information dropped by them.
Harry Whyte of Edison. Business poor.

[fol. 2846½] 5. Give the complete history of any complaints that you may have on competitors' brands of cement.
None.

6. Are your customers satisfied with our deliveries, packages, handling of complaints sent to us, tracing of cars when requested by them, etc.? If not satisfied give names of dissatisfied customers and state reason of dissatisfaction.
Heard no complaints.

7. What suggestions have you for improving our methods of handling business in your territory?

8. Do you know of any contemplated work in your territory that is not followed up by inquiry?
Reported on pink sheet.
Building Elizabeth. McManus Bros. (Owner).

9. What is your opinion as to the outlook for business in your territory during the next thirty days?
Fair.

10. What seems to be the opinion of the trade on our advertising? How can we improve it?
Good.

Remarks.

Yours very truly, H. A. Swett, Salesman.

[fol. 2849½] DEF'TS' EX. No. D-664

McKenna, Philadelphia, May 4, 1917.

We want to modify our present instructions regarding the handling of quotations for specific work.

Some time ago we tightened up a little bit on our method of handling, and we intended to continue along this line, but we don't want you to get the idea that we do not want business. We want to close up within the next few days all the business that we can get at "top" prices; that is, at prices which net us $1.50 Northampton and $1.60 Hudson for extended delivery business.

We want you to guide your quotations, however, so that there will be none issued for longer than 5 days without taking the matter up with us; that you will not issue a quotation for more than 10,000 bbls. on any one job without taking the matter up with us; and that you will not have outstanding at any one time more than 100,000 bbls. in quotations in total.

In order to guide us here in the office in our judgment of conditions, will you please arrange to send in each night a tissue copy of all quotations issued; each copy will have on it in pencil or pen figures, the price net to us at either Hudson or Northampton on the [fol. 2850] job in question. Please send us also copies of any extensions with the information on the price.

On trade business it will be satisfactory to use a minimum of $1.25 at Northampton, making this only when necessary to meet competitive prices which, as we understand it, are based on $1.55 Pittsburgh, $1.70 Mitchell, $1.70 Bellevue, $1.60 Fordwick, $1.60 Kingsport and $1.60 Richard City.

Yours very truly, —— ——. LGM-MH.

P. S.—Please send me each night a slip of paper with the total amount of your outstanding quotations on it.

MR. KENT: This will confirm my telephone conversation with you advising you, effective at once, all prices are advanced 40c per barrel. Please do not renew any outstanding quotations except at the new price. In other words, when these quotations expire, do not renew them unless you use the new price.

The conditions in our business are very serious and we do not want to be obligated for any orders which we will not be able to fill. Kindly cooperate with us in this matter, and oblige,

Yours very truly, —— ——, 2nd Vice President. FMC-H.

[fol. 2853] DEF'TS' EX. No. D-670

(Boston)

March 21, 1918.

MR. SANTEE: This will confirm my telephone conversation advising you, effective immediately, all prices are advanced 40c per barrel. Any orders for spot shipment which are placed with you before the quotations which we are mailing today reach your customers, would have to be accepted at the old price. You must not, however, make any new quotations at the old price and as the old quotations expire please do not renew them except at the new price.

The conditions in the manufacturing and shipping end of our business are so acute that we have been compelled to make this advance in our price. It has been impossible for us to secure a sufficient supply of coal to operate only a very small percentage of our capacity and on account of this small output our costs have been very materially increased. We are also having considerable trouble in getting bags returned to our mill, and while we know a great many shipments are held up by embargoes, in case your field men come across any bags which can be returned to us, please have them use every possible effort to have the bags shipped in.

Yours very truly, —— ——, 2nd Vice President. FMC-H.

March 21, 1918.

Representatives' Notice

#80

Price

Effective today, and as per advices given to all our representatives, price of Dexter Portland Cement is advanced 40 cents per barrel above prices heretofore, in effect at all points regardless of competitive conditions.

Coal Shortage

The necessity for this action has been brought about by a coal scarcity which is becoming more serious each day with no prospects of relief. It is possible that this condition may be relieved at an

earlier date than we anticipate. On this account, and because we have not much cement on hand and have numerous contracts which we are obligated to fill, it would seem inadvisable to make any quotations at the advanced price, excepting on very small contracts or on single carloads for shipment within fifteen days. Please be guided accordingly and report conditions as you find them in your territory.

Industrials

The practice of quoting for requirements of manufacturing plants and concrete product plants has not met with our approval in recent [fol. 2854] years, altho we have made a few exceptions. Unless otherwise advised we will not make any exceptions along these lines but will quote for delivery over a period of more than fifteen days to cover definite specific contracts only. This eliminates quoting for requirements of boroughs, towns, cities, etc.

Freight Rates

Effective April 15th, in the territory lying east of the Central Freight Association territory, which is practically the Buffalo-Pittsburgh Line, all freight rates will be advanced 20 cents per ton. In the territory west of the above mentioned line, the same advance will become effective April 1st.

[fol. 2855½] DEF'TS' EX. NO. D-674

April 4, 1918.

Sales Department

Effective at once. Use the following basing point prices in quoting Hercules Cement to dealers:

$1.90—Lehigh Valley.
$2.00—Hudson.
$2.00—Alsen.
$1.85—Universal.
$1.90—Fordwick.
$1.85—Mitchell.
$1.85—Bellevue.
$2.08—Union Bridge.
$2.38—New Orleans.
$2.38—Wilmington.

The above prices are net prices at the basing points and do not include bags. The usual cloth and paper sack charge and allowance remains unchanged.

In quoting consumers the usual differential as before advised applies, except in New York State where the policy of this Company will be to first try to quote through a dealer in the town in which the job is located and in the event of being unable to make satisfactory [fol. 2856] arrangements with a dealer in the town where the job is located, the differential that is used by the dealers in that town will be used. In no towns will a differential less than 10¢ be used.

In figuring prices from Universal use a minimum freight rate of 11¢ per barrel to all points.

In figuring prices from Union Bridge use a minimum freight rate of 15¢ per barrel to all points.

Effective at once. Use the following prices for export:

$3.00 per barrel in wood alongside steamer New York.
$2.85 " " " cotton " " " "
$2.87 per barrel in wood f. o. b. cars Jersey City.
$2.72 " " " cotton f. o. b. " " "

All export shipments subject to a discount of 2¢ per barrel for cash in ten (10) days from date of invoice.

Very truly, Hercules Cement Corporation. E. B. Goode, Jr.

[fol. 2856½] DEF'TS' EX. NO. D-675

The H. Wales Lines Co.

Strictly Confidential

April 24, 1918.

The Allentown Portland Cement Co., Allentown, Pa.

Attn. Mr. R. L. Cope

GENTLEMEN: We enclose herewith copy of a letter from the Engineers and Architects for the Gilbert & Barker Mfg. Co., which [fol. 2857] Company is a branch of the Standard Oil Company, as explained to Mr. Cope in New York recently.

As you know we have been doing some work for the Gilbert & Barker Mfg. Co., and there is quite a big job now under consideration. It is necessary for us to know at once what to say to these Architects, and what we say to them may be favorable or detrimental to our interests in connection with this contract, depending upon the price which the Standard Oil Co. may have for cement, and the price which we are able to name them. Please give us all the information you can regarding this matter at the earliest possible date.

You will understand that this is not a contract that we already have, but one that we hope to be able to get.

You will also note that they name Nazareth Portland Cement in their letter, which should be Allentown.

Respectfully, The H. Wales Lines Co. S. Tredennick.

April 22, 1918.

The H. Wales Lines Company, Meriden, Connecticut.

GENTLEMEN: We would greatly appreciate it if you will, at your earliest convenience, send us a letter stating the cost of Portland [fol. 2857½] cement, F. O. B. cars West Springfield, on which you will base your estimate for construction of additions to plant of Gilbert & Barker Manufacturing Co. We of course understand that you are agents for Dexter & Nazareth Portland Cement and we can assure you that the information will be treated as absolutely confidential by both the Owners and ourselves.

The reason for asking this information is due to the fact that the Gilbert & Barker Manufacturing Company is able to secure very low figures on Portland Cement through their associations with the Standard Oil Company. If they can furnish it cheaper themselves they would like to use their figures.

Thanking you in advance for your courtesy, we are.

Very truly yours, McClintock & Graig. Edward H. McClintock.

[fol. 2858] DEF'TS' EX. No. D-676

April 25, 1918.

The H. Wales Lines Co., Meriden, Connecticut.

Attention of Mr. Tredennick

DEAR SIR: Your letter of the 24th received in regard to new work to be done by the Gilbert & Barker Mfg. Co., West Springfield, Mass.

We have also read the letter from the architects themselves, dated April 22nd, and do not doubt that if they have connections with the Standard Oil Co. that they will be able to purchase cement at Standard Oil price. Standard Oil has yearly requirements for delivery to various points, but there is always a question whether a cement company that has a contract with the Standard Oil Co. will permit deliveries to any point not mentioned in the contract.

The cement situation today is very unusual and I very much fear that a great deal of new work will be held up on account of inability to get cement. Most of the mills of the Lehigh Valley have been compelled to close down practically the first three months of this year 50%, on account of inability to get coal. On the other hand, we are advised by good authority, that the Government will use more [fol. 2858½] cement than they originally anticipated, in fact, it is very probable that 75% or even more of the cement that the manufacturers can make for the remainder of the present year will be taken by the Government.

You can readily see that the shortage of cement on the one side, and the Government requisitioning practically all of the cement, that there are no inducements for us, or for anybody else to offer their cement at any price lower than the present market price.

Yours very truly, The Allentown Portland Cement Co. ——
——, Manager of Sales. R. L. Cope:G. E. R.

[fol. 2860] DEF'TS' EX. No. D-679

War Service Committee on Portland Cement

30 Broad Street, New York City, January 9, 1919.

To Cement Companies:

Attached herewith please find copy of letter written to me as Chairman of the War Service Committee on Portland Cement, by Mr. Bernard M. Baruch, Chairman of the War Industries Board, dated December 18th; copy of letter from Mr. Humphrey, dated December 19th, and copy of my acknowledgment to Mr. Humphrey, dated January 6th.

Yours very truly, John R. Morron, Chairman.

[fol. 2860½] DEF'TS' EX. No. D-680

United States War Industries Board

Bernard M. Baruch, Chairman

Washington

December 19, 1918.

Mr. John R. Morron, Chairman War Service Committee on Portland Cement, 30 Broad Street, New York City.

MY DEAR MR. MORRON: In transmitting the enclosed letter from Mr. Bernard M. Baruch, Chairman of the War Industries Board,

officially notifying you of the termination of the activities of your Committee January 1, 1919, may I add a few words of my own in appreciation of the splendid cooperation of yourself and your associates.

In spite of the adverse effect of the war upon the building industry which so restricted its activities that the disastrous conditions increased as the war continued, your industry loyally and patriotically met the necessities imposed by the war, even when it ultimately meant the closing of the business.

The task with which the undersigned, as Chief of the Building [fol. 2861] Materials Division, was confronted was so great that what would otherwise have been a most difficult situation was met through the invaluable assistance of the War Service Committee and whatever success may have resulted from the work of the Division is due largely to such assistance and co-operation.

While our official relations close with the present year, I shall always be deeply interested in the success of your industry; I sincerely trust that the very pleasant friendships that have been established may continue and that the intimate associations between the members of your industry, brought about through the work of your Committee, may also continue to its great benefit.

In heartily thanking you and your associates for your very generous and highly efficient support, I wish to extend to you and through you to them my very best wishes for Christmas, and to express the hope that the New Year may be one of the greatest prosperity for your industry.

Very truly yours, Richard L. Humphrey. Richard L. Humphrey, Director of Building Materials, Building Materials Division, War Industries Board.

[fol. 2861½] DEF'TS' EX. NO. D-681

United States War Industries Board

Bernard M. Baruch, Chairman

Washington

December 18, 1918.

Mr. John R. Morron, Chairman War Service Committee on Portland Cement, 30 Broad Street, New York City.

MY DEAR MR. MORRON: At the close of the activities of the War Industries Board, it is but simple justice to express our appreciation and gratitude for the loyal support given us by the industries of the nation.

As Chairman of the Board, I offer on behalf of my associates and myself a tribute of thanks to the patriotism and devotion shown by the entire commercial body of America. Its members have made service, and not profit, their rule. They have shown a desire to

subordinate itself and exalt public interest, and to this readiness to [fol. 2862] make sacrifices in the common cause has largely been due whatever success we may have been able to attain. I would be doing the industries in America an injustice if I did not make this acknowledgment.

May I express the hope that this same spirit may continue in times of peace, so that problems affecting all may be approached in the same spirit of helpful co-operation that has prevailed during the period of the war.

May I, through you, send this message of gratitude to you and to your loyal co-workers in the great industry which you have so ably represented.

Sincerely yours, Bernard M. Baruch, Chairman.

[fol. 2862½] DEF'TS' EX. NO. D-682

The Atlas Portland Cement Co.

New York

For the attention of Mr. MacFarland, Birmingham, Ala.

New York, Jan. 30, 1920.

I believe we are going to be quite short of cement, and I think it is entirely unwise to take any business now, except for exceptional reasons, which nets us less than our mill base prices at the various plants.

I think Mr. Burch wrote you a little while ago that you might take some business in the South that would net us about 1.57, but I think we are throwing our — away to do it now under these conditions. If — supply it they may be able to get it from such — the Alpha, Vulcanite and Giant up here, but — get it from the southern mill [fol. 2683] because the — [mutilated] it to them, and if they do get it from the concerns above mentioned upon here, it means that they later on will not be able to fill their contracts where it will do them a lot of harm not to fill them.

I therefore would like to put a very decided soft pedal on any business anywhere that is not natural territory to us, and at least where we do not secure our full mill base price. Of course there are cases where you have got to do a little warehouse business with the dealers, but you do not have to accept contracts which they may offer you, even for small amounts.

I think that taking the entire business into consideration, other people are being oversold. I believe that only about 50 or 60% of the contract business will be taken, but in spite of that I believe your dealer business is going to be so large that it will stampede things later on, and you won't be able to fill your orders, not only because you haven't the cement, but possibly because you could not ship it anyhow, and therefore I want to devote from now on, all of

our ability to taking care of natural Atlas customers, and not spread out into territory that is meant to take care of surpluses.

Yours truly, J. R. M.

[fol. 2863½] DEF'TS' EX. No. D-683

Feb. 16, 1920.

MacFarland, Birmingham, Ala.:

I answered yours of the 13th by wire today, of which I enclose copy.

I have not a doubt but what we could secure $1.75 Northampton in many cases in Ohio, Indiana and Michigan, but I believe that it would impress the dealers with the fact that we were trying to make all the money we could out of a situation, and I would much rather quote him as much as you can from Hannibal, and have it explained to him as to why we cannot ship him more, and then if in certain cases, such as you experienced last year with the Standard Oil and the Central Manufacturing Co., and others, if they should consider it a favor of the Atlas Company to ship from Northampton at $1.75, we would make every effort to do so in special instances, but, as explained to you in mine of the 9th, I think it would be very unwise to make quotations now on Northampton base for the reason that I do not believe we will be able to ship it, as well as for the fact that I think the impression would be decidedly detrimental in the long run, as above outlined.

[fol. 2864] The fact of the matter is we are getting into such shape, owing to climatic conditions and the jumble that the railroads will find themselves in on March 1st owing to past federal operation, that we are going to have our hands absolutely full taking care of the business into natural territory from the east, and when we add to this the business already accepted in the middle west to go from Northampton, it would, in my judgment, be entirely wrong to take on more business, which would tend to make all dissatisfied.

Let us go along and watch this thing develop when the pinch comes, and perhaps we can handle it as well this year as you did last, in running a few extra shipments from Northampton.

Yours truly, —— ——.

[fol. 2865] DEF'TS' EX. No. D-685

"The Atlas Portland Cement Company

"New York, April 11, 1919.

"To Atlas Customers:

"Representatives of the Cement Industry conferred with the Industrial Board of the Department of Commerce at Washington during the last week in March, at the request of the Board that everything possible be done by the Industry to encourage prompt build-

ing. The Industry, through the Committee, expressed its desire to co-operate to the fullest extent possible.

"Unfortunately, at the time of the conference there was a change in the policy of the Industrial Board, and therefore no definite, joint conclusion was determined; but the Industry thought it only fair to the trade that the reduction contemplated should be made, irrespective of these conditions.

"The charge for cloth sacks, of which there are four to the barrel, was reduced from 25c. each to 15c. each, making a reduction of 40c. per barrel gross to the purchaser, and the charge for paper sacks was reduced from 30c. per barrel to 25c. These reductions were made possible by recent reductions in the cost of such sacks to the manufacturer.

"Although the present cost of manufacture does not justify a reduction in the selling price of cement, the possibility of more favorable manufacturing conditions in the future which might result in a reduction in the cost of production was anticipated and prices were named accordingly. These prices are in accordance with quotations recently sent you.

"The action of the Industry was entirely voluntary, with the sole object of assisting in stabilizing building conditions, hoping that it would be appreciated by the purchaser and that increased volume will decrease cost and compensate for the reduction.

"The Atlas Portland Cement Company."

[fol. 2866] DEF'TS' EX. No. D-686

"Lehigh Portland Cement Co.

"Allentown, Pa.

"To Lehigh Customers:

"On April 1st we sent you a quotation naming a reduced price on Lehigh Portland Cement. A word as to the reasons for this revision of price may, at this time, be of interest.

"At the request of the Industrial Board of the Department of Commerce, representatives of the cement industry conferred with the Board at Washington during the last week in March. Through its representative, the Industry assured the Board of its cooperation with the Government's efforts to encourage prompt building.

"Due to a change in the policy of the industrial Board, which occurred at the time of the conference, no definite, joint conclusion was reached; but the Industry thought it only fair to the trade that the reduction contemplated should, nevertheless, be made.

"The charge for cloth sacks was reduced from 25c. to 15c. each, making a reduction of 40c. per barrel gross to the purchaser, and the charge for paper sacks was reduced from 30c. to 25c. per barrel. These reductions were made possible by recent reductions in the cost of such sacks to the manufacturer.

"A reduction was also made in the net mill price of Cement, this action being taken by the Industry entirely voluntarily, and with the hope that the reduced price will assist in stabilizing building conditions.

"Present manufacturing costs do not justify the reduction, but it is hoped that manufacturing conditions will in the future become more favorable and also that the increased volume resulting from more stable building conditions will decrease production costs to compensate for the price reduction.

"With world conditions as they exist today, it is impossible to expect prices on any commodity to recede to pre-war levels. Building construction of every kind should go ahead now, because the world's new price level is a permanent one, and because it is good business to build now for early returns. Prof. Irving Fisher of Yale University has stated the situation very concisely:

" 'Business men should face the facts. To talk reverently of 1913-1914 prices is to speak a dead language today. The buyers of this country, since the armistice, have made an unexampled attack upon prices through their waiting attitude, and yet price recessions have been insignificant. The reason is that we are on a new high price level which will be found a stubborn reality. Business men will find that the clever man is not the man who waits, but the one who finds out the new price facts and acts accordingly.'

"Lehigh Portland Cement Company."

April 14th, 1919.

[fol. 2867] DEF'TS' EX. NO. D-687

"The Atlas Portland Cement Co.

New York

For the attention of Mr. D. H. MacFarland, Chicago.

"New York, June 14, 1919.

"I note your letter of the 11th to Mr. Burch, in which you report hearing through the trade that before long the price of their cement would advance. As I stated to you when I was in Chicago—and I am still of the same opinion—I think our price is high enough, taking everything into consideration. Of course it would not be high enough unless we were going to be able to sell our entire output, because of the very large overhead on anything less; but from what you have written me from time to time I believe that we are going to be able, before the fall is over, to sell all we can make, in advantageous-price territory—that is to say, so as to keep a good base.

Of course, it is the same old story—if our competitors should go up we will have to be very sharply on the lookout that they do not flood us with orders which will prevent our giving prompt service to our dealers and to all our trade. In other words, it is the old game,

perhaps, of trying to load us up, in the detriment of ultimate results. But we will not worry about this until it occurs, and will try to handle it satisfactorily after that. We have a pretty good stock of cement at Northampton.

Yours very truly, J. R. M.".

[fol. 2868] DEF'TS' EX. NO. D-688

"N. Y., Dec. 26, 1919.

"Mr. Whitton, Mr. Eschenbrenner, Mr. Swett, Mr. Kahn, Mr. Kearney, Mr. Mathesius, Mr. Wight, Mr. Furbush, Mr. Smith, Mr. Bigbie, Mr. Edwards:

"In my letter to you of last week advising of our advance in price to the basis of:

$2.00 per barrel Bulk Lehigh Valley.
$2.00 " " " Universal.
$2.10 " " " Hudson.

I stated that we would accept a limited amount of business on the old price basis where it would do us good, having in mind the future and the fact that our competitors are underquoting us. Business has come to hand so freely, however, on our quotation commitments, that we must absolutely hold you to the new price basis, and I must ask you not to accept any further business on the old basis nor to commit yourself in any way on our acceptance of business on the old price basis without first taking the matter up with this office.

"As I have written you, we will very likely not have more than 1,800,000 barrels to ship in 1920, and as our commitments are in the neighborhood of 1,500,000, we must absolutely shut off further business except at new prices.

"Please acknowledge receipt and advise your understanding.

R. A. W."

Price Changes

Philadelphia Office, January 9, 1920.

Mr. Wetzler, Mr. Bruff, Mr. Kessel:

On account of the fact that the bags, which we are at the present time purchasing, are costing us in the neighborhood of 28½ cents, and due to the fact that the price of Osnaburg bags *are* continually rising, so that the market quotations now are in the neighborhood of 31 cents each, with a great possibility the price of bags going no lower and possibly even higher during the year 1920, and after talking the matter over with Mr. Mambert, we have decided to insert in all of our quotations, and as a rider on all of our contracts, the following clause with reference to sacks:

"The price named is based on a cloth sack basis of 15 cents. Should the Edison Portland Cement Company change its cloth sack basis during the life of this quotation of contract, the right is reserved to adjust the delivered price of cement accordingly."

This clause I am well informed is being inserted in the quotations and contracts of some of the other companies, and I also understand that a few of the other companies have raised their price for cloth sacks to 25 cents.

We seem to be the only company, up to the present date, who have definitely raised our price to $2.00 base Lehigh Valley District, and it is possible, of course, that the movement of cement on our part will not be as heavy as we might wish at some time later, at which time we may feel the necessity of reducing our price to the $1.75 as the Lehigh Valley basis. Having this in mind, I believe that you will all agree that the only safe thing to do to protect ourselves from tremendous losses during the coming year, on account of the excessive cost of bags, is to insert this clause in all of our quotations and contracts made or sent out after the receipt of this letter.

I am sure that you will all give this the careful handling which the situation demands.

W. D. Cloos.

c/c Mr. Mambert.

Lehigh Portland Cement Co.

Sales Department, Official Communication

NOTE.—Answers to these questions must be mailed to me Saturday of each week. This is to keep in close touch with conditions in the field.

B. L. Swett, Eastern Sales Manager.

Week ending Saturday, Dec. 20th, 1919. Salesman: Browning. Office: Buffalo.

1. What information regarding competitors or quotations did you get during the week?
Have previously advised you that Edison increased their price 25 cents per barrel, and have since learned that Bath also went up.

2. What special inducement of any nature are competitors offering in your territory?
None.

3. State what disadvantages, if any, caused by the actions of this company you are laboring under in meeting competition.
None.

4. Give names of competitors' salesmen that you have met during the week and information dropped by them.
All of them.

5. Give the complete history of any complaints that you may have on competitors' brand of cement.
No complaints.

6. Are your customers satisfied with our deliveries, packages, handling of complaints sent to us, tracing of cars when requested by them, etc.? If not satisfied give names of dissatisfied customers and state reason of dissatisfaction.
Yes.

7. What suggestions have you for improving our methods of handling business in your territory?
None.

8. Do you know of any contemplated work in your territory that is not followed up by inquiry?
I do not.

9. What is your opinion as to the outlook for business in your territory during the next thirty days?
Slow for sixty days.

10. What seems to be the opinion of the trade on our advertising? How can we improve it?

No comment this week.

Remarks: ——.

Yours very truly, Browning, Salesman.

[fol. 2874] DEF'TS' Ex. No. D-697

The Atlas Portland Cement Co.

New York

For the attention of Mr. D. M. MacFarland, Chicago.

New York, January 24, 1920.

That was wise of you to send me the letters both on the Century and the Broadway, because the Century was four hours late and the Broadway letter was delivered to me about two o'clock.

I have a telegram from Mr. Cabanis in answer to one I sent you, saying you are ill and will not be able to leave before early in the week for Birmingham, and I have sent you a message of which I enclose a copy. I am writing this letter in case you are not able to get me at my house tomorrow, Sunday.

I am not surprised to see the prices advanced by some of the others, and the situation is just this: We want to take care of our trade position and we want to sell the maximum amount of cement we are going to be able to make at Hannibal, which amount you are familiar with, as we expect, unless the unforeseen occurs, to continue manufacturing on about the same basis as today. Therefore, if without injuring your trade position or losing the kind of business that is essential to the Atlas future welfare as well as this year's welfare, I would be in favor of not recognizing the Universal base. I think it will be a good lesson to them to ignore it, just as the Kansas mills are obviously ignoring our Hannibal base; but I would not want to do this if it allowed the Universal to become established to any extent in the territory that is natural to us at Hannibal. It would seem to me, however, that after the experience the people have had with them during the last year, they would be very glad to pay the Hannibal base price.

I think you will find other advances coming; I do not see how these people can help the advance, because they have sold themselves to pieces, and if the price does advance of course it will make good a lot of contracts on their books that may not be if the price remains the same.

One thing that we are going to commence to do here at once is, to get a very intelligent idea as to what percentage of our contracts are going to be shipped this year. Of course we have the usual idea now, but if we look over our contracts closely and find that the time has really gone by when certain work represented by contract was ex-

pected to start, and then if we get in personal contact and find out how long before they are going to start, it will release without too much guesswork a certain amount of cement that we can sell again.

As you may know, it is the policy of a good many of the larger companies here in the east now to sell 100 per cent of their output in contract—or practically that—figuring that only about 50 per cent will be used. We have not taken that station yet because we have not been sure enough that there would be a shrinkage of 50 per cent in our booked contracts. We are now going to begin to look into the matter as much in detail as possible, to get the real facts. You may have started something of this kind or be doing it, but if not I suggest you do it.

In a nut-shell, the net of the Hannibal situation is this: We are going to make, as I told you, a certain number of barrels of cement; we want to establish relations and keep those which we have by good service; and we do not want to have any cement left at the end of the year. The indications are that there will be another advance of labor, and perhaps still another, which, linked with coal, will make the cost very high, but I am not ready yet because of cost necessity to advance the Hannibal base; but if you can eliminate, as your letter indicates, the Buffington $1.70 and take strictly Hannibal base, $1.75, Iola $2, and Mitchell $1.85 it will result probably in getting at least five or six cents a barrel more than the present average, which will help on the cost. And if it does not hurt your trade in the natural territory at Hannibal, that is my suggestion unless you know of some better reason to the contrary.

Yours very truly, J. R. M.

Enc.

[fol. 2875] DEF'TS' EX. No. D-698

The Atlas Portland Cement Co.

New York

For the attention of Mr. D. H. MacFarland, Birmingham.

New York, February 4, 1920.

I wired you today that I was thoroughly in accord with adding Indiana to my suggestion on Ohio—not taking less than the Northampton base and that only for Atlas customers or on trade business. Michigan should be included, and I presume it is getting round to a point now where we will not shrink any base prices to any extent.

It may interest you to know that we have on hand close to 400,000 bbls. available orders for cement; by "available" I mean those that will be ready to ship as soon as we can get them out and that are already in the hands of the mills. And I know you will also be disappointed to know that yesterday and days previous we were able to ship only about 3,000 bbls. out of Northampton. It is absolutely impossible to get cars, and if it is that way now I believe it will be worse from now on.

There is a possible chance, if the roads go back to private ownership on March 1st, that we will fare better. Whenever you are explaining to the customers the cause of delay in your territory you can say that it is caused by a scarcity of railway cars and service as a result of Government ownership. Be dead sure to get that into the minds of the people, because as long as they are advocating Government operation they are going to get this kind of service.

Yours very truly, J. R. M.

[fol. 2876] DEF'TS' EX. No. D-699

J. F. Forsyth & Company

Front Royal, Va., March 10, 1920.

Atlas Portland Cement Co., Philadelphia, Pa.

GENTLEMEN: How can we sell Atlas to contractors in carload lots on basis of $3.03 cost against Universal and Security at $2.96? We understand the $2.96 price is based on Universal rate.

Ship us 175 barrels Atlas in cloth. Apply against the Flynt Building & Construction Co. contract. We are putting this in our warehouse to replace deliveries we made to Flynt Co. during the past month.

Very truly yours, J. F. Forsyth & Company.

"The Atlas Portland Cement Co.

Philadelphia

For the attention of Mr. F. B. McKenna, N. Y. C.

"Philadelphia, March 13, 1920.

"Here is copy of letter from the J. F. Forsyth & Co., Front Royal, Va., about price on Atlas as compared with price on Universal and Security. The $2.96 price mentioned is based on $1.75 Universal and our price of $3.03 is based on $1.75 Lehigh Valley, which is equivalent to $2.00 Fordwick.

"The other dealer in Front Royal, W. E. Rudacille, handles Security.

H. F. D."

[fol. 2878] DEF'TS' EX. No. D-701

"May 26, 1920.

"Mr. A. E. La Roche, c/o Quinlan & Robertson, Inc., Hamburg, Pa.

"DEAR SIR: In accordance with the conversation which the writer had with you this day, it is our understanding that you desire us to start shipping immediately at the rate of two cars per day, the cement in question for use on Pennsylvania State Highway, Route #141. In this connection would call your attention to the fact that unless there should be a great improvement in the railroad situation, we will be unable to live up to the above schedule. We are today over five hundred cars back in our shipments, and have been averaging so far this month about eight empty cars per day for loading. Taking into consideration the accumulation of orders now on file with the small car supply you will understand it is impossible for us to give you shipments as required unless the railroad situation improves materially. Our shipments so far during the month of May are much below normal, which is all due to the shortage of cars. At present we have a stock of cement on hand at our mill of approximately 170,000 barrels, most of which should have been moved by this time provided we had secured the cars we needed, and unless we have some relief within the next two or three weeks we will be forced to shut down on account of not having any more storage space for our product.

"We are giving you this information so that you will thoroughly understand that our inability to ship is entirely due to the railroad situation.

"We were wondering whether it would not be advisable for you to communicate with the Phila. & Reading Railway Co. and explain to them your situation as regards the work in question, advising them it is for use on one of the Pennsylvania State Highway jobs, and see if some arrangement could not be made whereby the Phila. & Reading Railway Co. will turn over to the Lehigh & New England, on which road we are located, a certain number of empty cars per day especially assigned to us for you. Or, it might be that they would agree to place a trainload of empty cars at our plant for your work; in case they will do this, we will drop everything and load the train, which should only take us a little over a day.

"You can depend upon it that we are particularly anxious to move our cement, and especially want to help out all the contractors who are doing construction work for the Pennsylvania State Highway Department. We, therefore, hope that you may be able to accomplish something along the lines of the above suggestion, and if we can be of any further assistance to you in working out this problem, do not hesitate to call upon us.

"Very truly yours, Bath Portland Cement Co. —— ——,
Second Vice-President. WGD/H."

[fol. 2879] DEF'TS' EX. No. D-702

"Carolina Building Material Company

Florence, S. C., June 1, 1920.

"Giant Portland Cement Co., Philadelphia, Pa.

Attention Mr. S. N. Peters, Gen. Sales Mgr.

"DEAR MR. PETERS: We know that during these critical times that you have your hands more than full, and that you are being annoyed by letters of just this kind from all parts of the country, but we just can't help but lay our tale of woe before you.

"At the present time we haven't a single sack of cement in our warehouse, and this has been the case for some little time. And this is not the worst of it, we have quite a bit of cement sold that we are unable to deliver, and consequently several jobs have been held up which puts us in pretty bad shape.

"We know that you have been doing everything in your power to get all of the cement possible rolling, but would ask that if there is a possible chance that you get at least one car out for us at the earliest possible date, which would certainly be a great help to us.

"Thanking you for the many past favors you have shown us, and hoping that you will be able to help us out at this time, we are,

"Yours very truly, Carolina Building Material Co. J. H. Porter, Jr., Manager."

[fol. 2880] DEF'TS' EX. No. D-703

Copy to Mr. A. J. Barnes.

"June 4, 1920.

"Carolina Building Material Co., Florence, South Carolina.

"GENTLEMEN: I acknowledge Mr. Porter's letter of June 1st, and assure you that I realize thoroughly the position you are in and unfortunately all of our customers are in the same position, and this condition not only applies to the South but all over the country in general. There are surplus stocks of cement, in fact we have more cement than we can conveniently store, and are gradually curtailing production due to the fact that we cannot take care of same, and it is simply a question of inadequate transportation facilities. I assure you I will make every possible effort to ship you a car within the next few days, and again assure you we are doing our very best.

"Yours very truly, —— ——, General Sales Manager. SNP/F."

[fol. 2881] DEF'TS' EX. No. D-704

"June 3, 1920.

"Mr. J. P. Stewart, T. M. N. Y., O. & W. Railroad Co., Grand Central Terminal, New York City.

"DEAR SIR:

Empty Cement Bags

"We have been advised by a good many of our customers that they have been unable to forward us our empty cement bags for the reason that most of the railroads have placed embargoes against shipments of cement bags in less than carload lots. We also understand that in some districts the minimum weight which the railroads will accept is 10,000 lbs. or over, thus making it impossible in nearly all cases for our customers to collect sufficient empty cement bags to meet these requirements. It is most important at the present time that we receive our old bags back promptly, it being almost impossible to secure prompt delivery of new bags. Therefore, we hope the railroad companies will do all they possibly can to help us in getting our old bags back promptly.

"We are already suffering, as you are no doubt aware, from an acute car shortage, which in itself is bad enough, but if along with this condition there should develop a bag shortage due to our inability to secure the prompt return of old bags, we are afraid it will create in our industry a condition more acute than exists at present. We, therefore, will appreciate it if the railroads would put into effect the same ruling for the return of empty cement bags as they used during the past war; at that time the railroads set aside a certain day every week for the accepting of empty cement bags in less than carload lots. With the return to this method we feel that both the cement manufacturers as well as our customers will be greatly benefited.

"Any cooperation that you can render us in this matter will be most thoroughly appreciated.

"Very truly yours, Bath Portland Cement Co. —— ——,
Second Vice-President. WGD/H."

[fol. 2882] DEF'TS' EX. No. D-705

"June 4, 1920.

"Quinlan & Robertson, Inc., Hamburg, Pa.

"GENTLEMEN: We have your letter of June 2nd enclosing copy of letter which you received from the Philadelphia and Reading Railway Company. It is unfortunate that nothing can be done to better the present railroad situation, and you can depend upon it that as far as we are concerned we will do the very best we can for you, but unless we secure empty cars we cannot load cement and our posi-

tion to handle your shipments will depend entirely upon our car supply.

"As far as taking care of our last year's consumers is concerned, showing them the preference, would say that we have taken on very little new business since the first of the year; practically all of our present orders on file being with customers whom we sold during 1919. You can, therefore, feel satisfied that we are not sacrificing our old trade in order to secure new. This would be no time for handling our business that way. We will do all we can to start your shipments within the next few days, but, as advised you while you were in the office last week, we cannot make any definite promises when the delay in shipments is caused by the railroads, over which we have no control.

"If you will recollect we also talked over the matter of shipping in open top cars. In this connection would say that we have taken the matter up with the State Highway Department and are in receipt of a letter from them today advising that it makes no difference to them whether we ship in open-top cars or not, provided the cement reaches destination in first-class condition. We understood you were going to consider shipping in open top cars, and would be pleased to hear from you as to whether you would like to have us make any shipments in that way. Any shipments which we make in open top cars to our trade, of course, are made at the customers' risk. If our customers will supply us with the tarpaulin covering we will ship the cement, the only extra charge being the extra cost of loading in open top cars, which will be something between ten and fifteen cents per barrel. If you should so desire, we will purchase the tarpaulins, charging them to you at their exact cost, which we understand is about $78.00. We are making our first shipment today in open top cars, and are keeping an exact count as to the extra cost of loading, so that after today we should know just what this amounts to. If you are interested in taking shipments this way, kindly advise us as soon as possible.

"Very truly yours, Bath Portland Cement Co. —— ——,
Second Vice President. WGD/H."

"'The Bath Portland Cement Co., Finance Building, Philadelphia, Pa.

"GENTLEMEN: Enclosed please find copy of letter received from Mr. Falck, General Manager, Philadelphia & Reading Railroad, in reply to our letter of May 27th, in reference to trainload of cement.

"We wish you would endeavor to start at once to ship us at least

two (2) cars per day. We think your last year's consumers should have the preference over new construction business this year.

"Yours truly, Quinlan & Robertson, Inc., per A. E. La Roche."

(Copy)

"Philadelphia & Reading Railway Company

"Philadelephia, May 28, 1920.

"Messrs. Quinlan & Robertson, Inc., Contractors, Hamburg, Pa.

"GENTLEMEN: I have yours of the 27th instant, in the matter of furnishing box cars for cement.

"I beg to assure you that we are doing everything that we reasonably can in the matter of furnishing cars for cement and all other commodities. You, of course, appreciate the tremendous shortage of this class, as well as other classes of equipment, and also that the Interstate Commerce Commission have issued instructions for the forwarding of box cars in very considerable quantities to the west empty to protect the grain situation. It is impossible for us to fill the orders of our patrons for this class of equipment. The very best we can do is to give a proportionate distribution of the equipment that is available; at the same time we are doing better than about fifty per cent.

"It is, of course, entirely out of the question for us to assign cars specifically for any particular consignee. We can only give to the Cement Company their percentage of the total cars available and they will have to then consign them as best suits their requirements.

"I regret that I cannot give you any further encouragement in this matter, but will have our people do whatever they reasonably can.

"Yours very truly, F. M. Falck, General Manager."

[fol. 2884] DEF'TS' EX. No. D-707

"Knickerbocker Portland Cement Company, Inc.

"New York City

"June 10, 1920.

"DEAR MR. NAYLOR: Regarding my recent visit to Johnstown on Wednesday and my reason for not calling you was that we had arranged that if the Cosgrove Company were unable to have anything which would interest you, I was not to call you. They did, however, offer me 8 cars of slack and 10 cars of Runamine, which were on wheels and ready to be shipped, and this coal would meet our requirements very nicely as far as the analysis *are* concerned but the price asked was my reason for not doing anything. The price they wanted was $9.50 f. o. b. mines, and I assumed it would take the $2.70 rate.

"The coal situation as I learned from several men in Johnstown will become more critical and the prices will go higher. This information came from very reliable sources, such as Mr. Lloyd of the Oakridge Coal and Coke Co., and Mr. Cosgrove of the Cosgrove Co., Mr. Darlington of the Whitney Kemmer Co.

"I also met Mr. A. C. James who is connected with the State of Pennsylvania, the Mining Department, and whom I have known for some time. His position necessitates him visiting every coal mine in the State of Pennsylvania and therefore he would naturally know conditions. He states that if relief is not given the companies regarding coal supply, it was his idea that several large manufacturing concerns would be required to close their plants.

"I did, however, give Mr. James the analysis of the coal we required and told him to advise you in the event, if he heard of any coal which we might be able to secure.

"The Cosgrove Co. will undoubtedly quote you from time to time. I have also given them Mr. White's Hudson address.

"Hoping this information will be of considerable value to you, I remain,

"Yours very truly, B. F. Abbott."

[fol. 2885] DEF'TS' EX. NO. D-708

"June 15, 1920.

"DEAR MR. WHITE: When at Pittsburgh last week I placed an order with the Westmoreland Coal Company for 25 cars at $8.25 per ton F. O. B. mines.

"Most of the coal will be shipped at the short rate, but in order to secure the entire shipment it may be necessary to ship some of the cars under the long rate. They assured me that this would not be done unless absolutely necessary to fill the order.

"Yours very truly, —— ——, President. ADN:ENJ.

Copies to O. E. Wasson, A. S. Jewett.

[fol. 2886] DEF'TS' EX. NO. D-709

June 16, 1920.

DEAR MR. WASSON: Referring to your letter of June 15th with regard to the coal situation, the coal market has simply gone wild and prices are now ranging from $9.00 to $10.50 per ton. I don't know where this thing will stop, but I notice in the New York papers this morning that the Attorney General and the Interstate Commerce Commision were in conference to see what could be done to relieve the situation, and there may be an embargo declared, or placed, on coal exports, which should somewhat relieve the situation.

Of course, the coal operators and jobbers contend that an embargo on export shipments will not help very much, but I am of the opinion that it will have quite a good effect, and while it will not entirely relieve the conditions it will certainly make more coal available and the prices may go down.

We simply cannot pay the present high prices and make any money, but I feel that the placing of the order for 25 cars in addition to the 20 placed with Mr. McCann, was a very good move under the circumstances, and if the coal under order comes through we should be reasonably safe for the next four or six weeks.

I understand that the Interstate Commerce Commission are receiving all kinds of complaints from associations representing industries, governors of states, and individual manufacturers, and I firmly believe that something will surely be done within the next thirty days to furnish relief.

However, we must not relinquish our efforts to secure coal, for if our guess is not right and there is no relief furnished within the next thirty days we will be up against it and will probably have to shut down. Therefore, I want you to keep right after it, having Mr. White send out inquiries each day with a view to securing quotations for immediate shipment. I should like to have you get in touch with me on the telephone whenever you get any satisfactory quotations, so that we can decide what is best to be done.

Mr. Snider, Coal Traffic Manager of the N. Y. C. Railroad, advised me this morning that the N. Y. C. had practically stopped confiscating coal, only taking a few cars here and there.

I admit that at the present time the situation does not look very flattering, but it is always darkest before dawn and I hope that within the next ten days we will begin to see some relief.

While it might have been well to have placed orders for 50 cars of coal at $8.25 per ton, it was impossible to secure but 25 at that time. I have given the Westmoreland Coal Company an open order to try to get us an additional 20 cars of coal for immediate shipment, and they have promised to give us first call on any orders they have.

Yours very truly, —— ——, President. ADN:ENJ.

[fol. 2887] DEF'TS' EX. NO. D-710

"Knickerbocker Portland Cement Company, Inc.

"Hudson, N. Y., June 15, 1920.

"DEAR MR. NAYLOR: I am enclosing letter which I received from the Franklin Coal & Coke Co.

"In looking over the telegram which we received in answer to our inquiry, I find they run about as follows:

"Lawsonham Coal Co., cannot quote.

"Continental Fuel Corp., nothing to offer.

"Northern Coal Mining Co., 10 cars, $9.00-$2.50 freight rate.

"Frontier Mining Co., 25 cars, $9.00-$2.23 freight rate.
"Fairview Mining Co., $9.00 Clearfield freight rate.
"In view of the situation I think you were quite wise in placing an order for 25 cars at $8.50. The railroads are confiscating coal again and it is possible we should have purchased 50 cars instead of 25. However, the price is so exceedingly high that it makes me hesitate to want to purchase coal at this price. I realize though if we are going to keep our factory running we must have some coal coming in to us until such a time as we can see whether or not the market is going to break.
"Very truly yours, —— ——, Superintendent. OEW:MVT."

[fol. 2888] DEF'TS' EX. No. D-711

"July 1, 1920.

"Mr. John H. Wickersham, Lancaster, Penna.

"DEAR SIR: We understand from phone conversation of this afternoon that you can take shipments in bulk at Lebanon, and as this will probably expedite shipments we will change over your order and endeavor to get off a few cars in bulk promptly.
"In reference to quoting on 30,000 bbls., we regret to advise that there is no improvement in the shipping situation, and also owing to the uncertain coal supply and cost of same, we cannot form any basis for cost on cement for next year's delivery, and are therefore not in a position to make any quotations at the present time.
"Thanking you, however, for the inquiry and the many courtesies you have extended us, we remain,
"Yours very truly, —— ——, General Sales Manager.
SNP-W."

[fol. 2889] DEF'TS' EX. No. D-712

July 2, 1920.

"Mr. Louis Rafetto, President Bath Portland Cement Company, Finance Building, Philadelphia, Pa.

"DEAR SIR: In checking up our coal records, we find we have four cars of steam and twenty-five cars of gas coal on wheels, the last notice of steam coal covers June 19th while gas June 28th.
"On account of not receiving any steam coal since June 24th, we were compelled to close down the entire plant except the Packing Department yesterday when the shift changed at 5:15 p. m., on account of being desperately low on steam coal, in fact, something must be done so we can obtain coal not later than the middle of next week, otherwise we will not have sufficient coal to keep our Packing Department in operation. This will necessitate hauling what little coal we have at our Coal Grinding Department to our Boiler House.

"Will you please advise as to what we may expect in the way of shipments coming forward to keep our steam plant in operation. This we are compelled to do also on account of fire.

"Very truly yours, —— ——, First Vice-President. FBF-J."

"	P. R. R.	189891

"We are in urgent need of the above shipments as we are practically out of coal at the present time and for that reason have been forced to shut down our manufacturing department today. Our supply of coal on hand is only sufficient to keep our packing department operating until Tuesday next, July 6th, and unless we receive shipments of coal by that time we will be forced to discontinue packing. This will prevent us making further shipments of cement until the coal arrives. If we are forced to do this it will seriously inconvenience our customers, and will force us to discontinue for the time being all shipments to the Phila. Navy Yard, where we are supplying cement on a very important contract, namely: Dry Dock No. 3. We are calling your attention to this contract in particular for the reason that the Navy Department is in urgent need of shipments.

"Your prompt attention to this matter is absolutely necessary, and we will appreciate it if you will advise us upon receipt of this letter just what you are able to do as far as expediting the movement of this coal is concerned.

"Very truly yours, Bath Portland Cement Co. —— ——,
Second Vice President. WDG/H."

[fol. 2896] DEF'TS' EX. NO. D-720

"August 10, 1920.

"Mr. John J. McCann, Poughkeepsie, N. Y.

"DEAR MR. MCCANN: I wish to confirm my order for twenty cars of coal to be shipped at once, price $10.50 per ton f. o. b. mines. It is understood that the analysis of this coal will meet our requirements. Our mill is down on account of lack of coal, and I wish you would have the cars shipped immediately, if possible.

"Yours very truly, —— ——, President. ADN.—ENJ."

[fol. 2897] DEF'TS' EX. NO. D-721

"August 25, 1920.

"DEAR MR. WASSON: Referring to your letter of August 24th with regard to orders for coal that have been placed, Mr. White has been advised of each order but evidently he has either overlooked or misunderstood my letters.

"In order to make the matter clear, I am listing the orders that have been placed:

John J. McCann, 30 cars at $10.50
John J. McCann, 30 cars at $11.00.
John J. McCann, 10 cars at $11.75.
Westmoreland Fuel Company, 27 cars at $10.75.
Ardean R. Miller, Jr., 40 cars at $11.00.
Frontier Mining Company, 20 cars at $10.50.
Stewart & Hammer, Inc., 10 cars at $8.50.
Stewart & Hammer, Inc., 5 cars at $10.50.
Fairview Mining Company, 5 cars at $10.50.
Fairview Mining Company, 5 cars at $10.25.

"Of course some of this coal may not be shipped, but I am in hopes that a greater part of it has already been forwarded so as to get ahead of the freight increase.

"As I explained in my other letters, these are the orders that I have placed. In addition thereto, coal is now en route on old orders placed at the cheaper prices. Therefore, if we get the coal that I have ordered and in addition thereto the coal now en route placed on other orders, we should have a sufficient supply to run the plant full for the month of September. It seems to me that this coal ought to be showing up at the mill within a few days.

"Yours very truly, —— ——. ADN:ENJ."

"Knickerbocker Portland Cement Company, Inc.

"Hudson, N. Y., Aug. 24, 1920.

"DEAR MR. NAYLOR: Replying to your letter Aug. 23rd regarding the amount of coal purchased, I am indeed pleased to know that you have made quite a few purchases of coal. In checking over the daily report which Mr. White makes out, I find we do not show the amount of coal on this report that you have purchased, and I am wondering if it would not be advisable to have a list of purchases made in order to make our report complete.

"Very truly yours, O. E. Wasson, Superintendent."

[fol. 2899] DEF'TS' EX. No. D-723

"The Allentown Portland Cement Co.

"Allentown, Pennsylvania

"August 20, 1920.

"Col. J. W. Fuller, President Allentown Portland Cement Co., Catasauqua, Pennsylvania.

"DEAR SIR: The coal situation has again tightened up as the B. & O. Railroad have embargoed the P. & R. Railroad. The embargo is more rigid for the moment than it has been at any other time this year, as the P. & R. Railroad locomotive fuel has also been embargoed.

"We have had the question of our coal supply up with both the P. & R. and B. & O. officials, but we have secured nothing definite from them except that they hope to have the situation cleared sufficiently by Monday to permit our coal to come along uniformly. This has put us in a position where we have had again to cut down kiln operation.

"On Wednesday evening during a heavy rain storm, a bolt of lightning burnt off several of our cables and shut the plant down until repairs could be made. This, together with the abnormal amount of heavy rains, have held up the plant operation, and made things very difficult to keep going uniformly.

"About everything that can happen to retard the output, has happened, so if we are successful from now on in getting sufficient coal to keep going uniformly, we will show a better production for the next few months.

"Very truly yours, Allentown Portland Cement Company.
J. T. Phelan, Vice-Pres. & Genl. Manager."

DEF'TS' EX. NO. D-731

"Giant Portland Cement Company

Philadelphia Office

"April 7, 1920.

"DEAR SIR: Effective today we are making the following base prices: Lehigh Valley, $1.95; Hudson River, 2.05.

"Cloth bags are to be charged at the rate of fifteen (15c.) cents each.

"The differential in paper will be 35c. per barrel less than in cloth.

"These are prices to dealers.

"Yours very truly, —— ——, General Sales Manager. SNP-N."

[fol. 2907] DEF'TS' EX. NO. D-732

"Bath Portland Cement Co.

Phila., Pa., April 7, 1920.

"Mr. W. J. Kenlon.

"DEAR SIR: We are sending out quotations today to our trade advancing the price twenty (20c.) cents per barrel. When you figure prices, until further notice, use a mill base of $1.95 net Lehigh Valley or $2.05 net Hudson, as we understand the Hudson River mills are figuring their prices on this basis, to dealers. Consumers 10c. higher.

"We are still quoting cloth sacks on the basis of 15c. each and paper at the rate of 25c. per barrel, which makes the price of paper 35c. per barrel less than the price in cloth.

"Some of your customers may endeavor to place orders with you at our old price, but we positively will not accept any orders for shipment at our old price that were not received by us in this morn-

ing's mail. We are already about three hundred cars back in our shipments, and for this reason, for our own protection, must discourage dealers placing orders for stock just for the purpose of getting the advantage of the lower price.

"With this increase, however, it will not be our policy to go ahead and take on any new contracts, unless conditions in manufacturing and transportation should improve. We will accept business for current shipment only.

"There is a tendency on the part of some customers to place blanket orders for a large number of cars, shipment of which within the fifteen day period is an absolute impossibility. We are willing to take an order from a customer for one or two cars at current market prices, but when they show a tendency to place orders with us for a large number of cars we will ship same at our current market price provided shipment can be made within fifteen days from date of order, but we will not guarantee any prices for a period longer than fifteen days from date of order unless it would be for a car or two at the most. Of course this pertains only to current business, and has nothing whatever to do with orders you receive account of contracts already filed.

"Should there be anything in these instructions not absolutely clear, kindly take it up with us at once.

"Very truly yours, Bath Portland Cement Co. W. G. Dutton, Second Vice-President."

"30 East 42nd Street,
"New York City, April 7, 1920.

"W. H. Watson, 360 Bainbridge St., Brooklyn, N. Y.:

"Raised price today two dollars Lehigh Valley two dollars ten cents Hudson.

"Pennsylvania Cement Company."

[fol. 2909] DEF'TS' EX. NO. D-734

Edison Portland Cement Co.

"April 8, 1920.

"Price Memorandum

"Effective today, price on Edison Portland Cement for immediate or fifteen days shipment, will be based on $1.95 Lehigh Valley; $2.05 Hudson.

"Cloth sacks to be on a fifteen cent basis all over the territory, with the exception of the State of Ohio, where twenty-five cent cloth sacks will apply.

"Price for Greater New York delivery in boat-load lots of not less than 1,000 barrels, within the New York Harbor lighterage limits, $2.95 per barrel, alongside dock, including fifteen cent cloth sacks.

"Where all rail rates from Lehigh Valley, Hudson or Alsen, to points adjacent to the water make a less rail price, the rail rate will govern. This will apply to some points on Staten Island and the Hudson River.

"To rail delivery points on the Long Island Railroad, Boroughs of Brooklyn and Queens, the Lehigh Valley base, plus all rail rates, will govern.

"There will be no water delivery rate at Far Rockaway and points on that side of Queens as water deliveries are not practical. If water deliveries are made to Far Rockaway and nearby points, the actual cost of lighterage will be figured unless such costs make a price which is higher than the price based on Lehigh Valley plus all rail rates.

"Where rail delivery on the Long Island Railroad is required, adjacent to water delivery points, two prices will be made; one based on $2.05 Hudson, plus thirty cents water rate, plus bags; the other based on $1.95 Lehigh Valley, plus bags, plus all rail rate.

"All prices made for shipment in cloth bags for other than immediate shipments, are to be subject to change in sack value."

"The Atlas Portland Cement Co.

"New York

"For the attention of John R. Morron, President.

"New York, April 8, 1920.

"During the past few days we have learned from the trade in various sections, including New England, New York City, New York State and the Philadelphia territory, that Alpha, Phœnix,

Penn-Allen and two or three other cement companies have increased their price 20 cents a barrel.

"A typical reflection of this occurred in Boston where one of the dealers called us up and asked us to take a ten thousand barrel order for immediate shipment.

"I have also seen three Atlas dealers, all of whom had been informed by some of our competition of a 20 cents increase in price.

L. R. B."

"The Atlas Portland Cement Company

"Widener Building, Philadelphia

"April 8, 1920.

"GENTLEMEN: For your immediate acceptance, we quote you on Atlas Portland Cement per barrel, f. o. b. station named in address, subject to a cash discount of 5 cents per barrel for payment within 10 days from date of invoice.

"This price is limited to a single carload and includes the value of four (4) cloth bags, returnable at 15 cents each in accordance with our customary terms.

"Any orders placed at the above price are subject to our other usual terms and conditions and to the following restrictions:

"(1) Delay in shipment owing to past and present shipping conditions.

"(2) Charging for cloth sacks at our current price for cloth sacks at the time of shipment.

"(3) Subject to any change in existing freight rates.

"Our price for the present in paper sacks is 35 cents per barrel less than the above price in cloth sacks. We anticipate a shortage of cloth sacks and if you will permit shipment in paper, it will help us to avoid a shortage of cloth sacks and will probably enable us to ship you the cement sooner than we could promise to do in cloth sacks. If you can take shipment in paper, please advise us right away.

"This price does not apply on any specific jobs which require delivery over a period of time. Please do not quote your customers any prices based on this quotation but take up with us any jobs on which you wish to name a price.

"We have also advanced our price on Atlas White Portland Cement and will be glad to send you a quotation on this product if you so desire.

"We regret that we are obliged to couple our quotation with restrictions but we hope by them to protect both you and ourselves against any further change in conditions which might work a hardship.

"Yours very truly, The Atlas Portland Cement Company."

[fol. 2932] DEF'TS' EX. No. D-764

"Edison Portland Cement Co.

"New York, June 26, 1920.

"DEAR MR. WETZLER: For the past several weeks, I have been going over ways and means to handle the present situation arising out of the high cost of coal and the poor shipments of cement on contracts and orders on hand.

"I want to recite a few facts.

"(1) Last fall we contracted with two of the most reputable coal companies in the business—companies who have had contracts with us for upwards of sixteen years continuously on their books for our full supply of coal for maximum production during the year 1920.

"(2) Due to the shortage of cars for shipment of coal, we have been able to receive, since the first of the year, less than 20% of the coal contracted for, and by checking up these companies who have contracts with us, we know that they are giving us our full allotment of coal based on the car supply.

"(3) In order to produce cement to fulfill our contracts, we have ever since November 1st, been buying spot coal to fulfill our requirements in addition to the coal received on contracts.

"(4) We contracted for coal at the mines at less than $3.00 per ton for this year's supply and are now, and have been for some time past, paying from $8.50 to $10.50 at the mines. Just at present, we are paying an average of $10.00 per ton.

"(5) The present price of coal, including freight to our mill, makes the coal item included in the cost of cement alone about $1.25; whereas, in estimating on this year's costs, we had figured as a basis for our selling price only about $.50 per barrel as our coal cost alone.

"(6) Under present conditions, our cost of producing cement due alone to the increased cost of coal more than $.75 per barrel in excess of the cost at which we figured our selling price at the first of the year.

"(7) We cannot continue to operate the mill and manufacture cement at such a loss indefinitely.

"Now it seems to me that in justice to ourselves we should curtail our production to such a point as would utilize only the coal which we are receiving on our contracts which would mean about 20% shipments on contracts, dependent upon coal received. I am, however, in doubt as to whether or not we should take such a radical step, having in mind that our customers have work started on which the curtailment of deliveries of cement would cause an undue loss, without first presenting the matter fairly and openly to our customers, asking their advice as to what we should do.

"I have in mind that all our customers would prefer to authorize us to buy spot coal and continue manufacture, charging them for the additional cost to produce on account of the coal situation alone for such time as conditions remain as they are, and I would suggest that you personally interview, if possible, all of our customers with whom we have contracts, laying this matter before them, or, if you find it impracticable to take the matter up personally with all our customers, perhaps write them clearly and fully the details, endeavoring to make clear just what position we are in and just why we are in need of their help to continue delivering cement as fast as the car supply will permit on all of our contracts.

"(Signed) W. D. Cloos, General Manager."

[fol. 2933] DEF'TS' EX. NO. D-765

"Change in Price of Edison

July 1, 1920.

"Effective this date, price on Edison to dealers will be based as follows: $2.50 net Lehigh Valley; $2.60 net Hudson or Alsen.

"Add $1.00 per barrel for shipment in cloth sacks and 25 cents per barrel for shipment in paper sacks.

"All delivered prices will include a dealers' trade discount of 10% exclusive of the value of the package.

"The cash discount will remain at 5 cents per barrel for payment within ten (10) days after date of invoice.

"Any orders accepted will be subject to indefinite delay in shipment price to be that in effect for Edison Cement when shipment is made.

"No change in the water rate schedule of April 8th, 1920."

[fol. 2934] DEF'TS' EX. NO. D-766

"N. Y., July 1st, 1920.

"Mr. Bigbie, Mr. Wight, Mr. Khan, Mr. Furbush, Mr. Mathesius, Mr. Whitton, Mr. Kearney, Mr. Eschenbrenner:

"Please note the attached copy of letter written me under date of June 26th by Mr. Cloos, our General Manager, outlining how our manufacturing cost has recently advanced 75 cents per barrel through the coal item alone, and that it looks as though as a matter of self perservation, we will have to operate the mill about one-fifth time as contract coal is received unless the trade generally will give us an increase in contract price to enable full mill operation. We have decided before going to the extremity of operating the mill part time, which will make for indefinite delay in shipments, to put the matter squarely up to those with whom we have contracts and have them decide what we are to do—whether they are content to wait indefinitely for cement or if they will authorize an increase in contract price to in a measure offset the huge losses we are now bearing.

"We estimate that based on present costs, we should receive at least $2.50 bulk at the mill for each and every barrel that is now being shipped to enable us to come out whole. We however are not in a position to ask such price by reason of the fact that the other Lehigh Valley manufacturers are on the basis of $2.25 bulk at the mill, but we certainly should get an advance in price to the basis of $2.25 or we will be compelled to take the drastic action of running the mill only as contract coal is received.

"We have lost so much money in our endeavor to fill contracts as placed without asking for relief, that we have reached the point where we absolutely cannot further carry the burden, and as I say, it is up to the dealers and contractors with whom we have commitments to help us out in these high costs or they will have to be content to receive cement as we can make it upon receipt of contract coal.

"I attach a list of contracts in your territory with the request that you start out the beginning of the coming week and personally interview each and every one of the dealers and contractors involved; let them read Mr. Cloos' memorandum to me, and say that we will be very glad indeed to have them look over our records to satisfy

themselves on this matter of costs. I wish you would go with the dealer to interview the contractor, and if necessary, the owner, to explain the situation, pointing out that it is not one of our making and that the conditions are entirely beyond our control. If this is not clear, please call me on the telephone but get busy immediately as I want to have this situation cleaned up by the 10th of July so that we will know which contracts are to be filled as cement is made with contract coal, and which contracts are to be filled on basis of shipment as the car supply will permit based on cement manufactured with spot purchased coal.

" Raw. J. N.

"P. S.—I am attaching several extra copies of Mr. Cloos' memorandum to me in order that you may if requested leave a copy with the dealer or contractor with whom the matter is discussed."

[fol. 2935] DEF'TS' EX. NO. D-767

"N. Y., July 16th, 1920.

"Mr. Whitton, Mr. Furbush, Mr. Kearney, Mr. Bigbie, Mr. Mathesius, Mr. Eschenbrenner, Mr. Wight, Mr. Kahn:

"From information that I have been able to gather, it is evident that practically all of the cement manufacturers in the East have advanced their price to a dealer basis of $2.50 Bulk Lehigh Valley, $2.60 Bulk Hudson.

"With this advance in price, our competitors have instituted 10¢ per barrel cash discount allowance (mind you, not the 10% dealer trade discount which we established June 1st, but ten (10) cents per barrel cash discount allowance instead of five (5) cents as heretofore applied.)

"You know, that generally speaking, we have not been taking on business of any character, although we have booked an occasional trade order from some of our old friends, such orders being accepted at the Edison price in effect at time of shipment, also indefinite delay in shipment.

"About three weeks ago, careful analysis of costs indicated that we should get at least $2.50 bulk at the mill in order to come out whole, and we then wrote all the dealers who had trade orders on file with us that they were then being held at price of $2.50 bulk at the mill—so you see, the other people have only followed our lead, with this difference—that they have instituted a ten-cent per barrel cash discount allowance, whereas we are still on the five-cent per barrel cash discount basis, although I believe we will institute the ten-cent cash discount allowance August 1st, of which I will write you further a little later on.

"I just want to let all of you men know that while there is practically no business being booked by any of the manufacturers, the

present market to dealers is $2.50 bulk Lehigh Valley, $2.60 bulk Hudson.

"Please acknowledge receipt.

R. A. W."

"New York

"New York, July 17, 1920.

"Effective at once, we are advancing our price twenty-five cents (25c) per barrel and changing our cash discount to ten cents (10c) per barrel, in accordance with the attached copy of quotation.

"All orders taken subject to increase in price will be invoiced at this price until such time as we change it.

"We do not notify our customers, of course, in advance of any increase in our price, but we do notify them at the time we ship the cars that our price has changed.

"Our shipping situation continues to be better than it was some weeks ago, although we still have a large accumulation of orders with Hudson and Northampton, due to the car shortage which existed for such a long time.

"Do not do anything in the way of securing business or taking orders unless you have specific instructions from your District Manager.

LGM.-ES."

[fol. 2939] DEF'TS' EX. NO. D-773

"The Atlas Portland Cement Company

"New York

"Our present price to you on 'Atlas' Portland Cement is: $— per barrel, including 4 cloth bags at twenty-five cents (25c.) each, returnable at the same price, under our usual conditions, f. o. b. cars.

"In paper bags, seventy cents (70c.) per barrel less than in cloth bags.

"Based on this price, we believe that there should be a larger cash discount. Effective, therefore, with this quotation, on all new business the cash discount will be ten cents (10c.) per barrel instead of five cents (5c.) per barrel, as heretofore.

"All orders tendered are subject to our acceptance; to our usual terms, conditions and limitations, and to the following:

"1. Prices herein quoted are subject to any increase in freight rates from those now in effect.

"2. Shipment at our current market price on 'Atlas' Portland Cement on date of shipment.

"3. Delay in shipment owing to past and present conditions.

"4. Change in price of cloth bags to our market price for cloth bags at time of shipment.

"On account of the unusual conditions existing today, we suggest that you do not obligate yourself to deliver "Atlas" Cement without first taking the matter up with us, at which time we will use every effort within our power to further our common interests.

"Yours truly, The Atlas Portland Cement Company."

"15 July, 1920.

"To Mr. J. A. Horner, G. M.:

"We understand that the Lehigh people have quotations out this morning showing a 25c. per bbl. advance and have, also, made the cash discount 10c. instead of 5c. I suppose you will follow suit shortly and will advise.

"J. W. Ramsay."

[fol. 2940] DEF'TS. EX. NO. D-776

N. Y., July 16th, 1920.

Mr. Kahn, Mr. Wight, Mr. Eschenbrenner, Mr. Mathesius, Mr. Bigbie, Mr. Kearney, Mr. Furbush, Mr. Whitton:

"I just want to advise you that while the car supply is a little better than it was a month or two ago, we have not been able to make any impression on the list of pending orders at the mill. We are still, generally speaking, about two months behind in shipment, hence we are not in position to take on any new business of any character at *at* this time.

R. A. W."

[fol. 2941] DEF'TS' EX. NO. D-777

"Giant Portland Cement Company

"Philadelphia Office

"July 17, 1920.

"DEAR SIR: Effective at once we are making the following base prices:

To Dealers: Lehigh Valley, $2.50 per bbl.; Hudson River, $2.60 per bbl.

"Cloth sacks are to be charged at the rate of twenty-five (25c) cents each.

"The differential in paper sacks will be 70c. per barrel less than the gross price in cloth.

"The differential in bulk will be $1.05 per barrel less than the gross price in cloth.

"Do not make any quotations whatever based on these prices unless authorized by this office.

Please acknowledge receipt.

"Yours very truly, —— ——, General Sales Manager."

[fol. 2942] DEF'TS' EX. NO. D-778

"New York, July 18, 1920.

From: Mr. E. B. Goode, Jr.

To: Sales force.

Subject: Price changes on Hercules Cement.

"Effective at once and until further notice use following basing point prices when quoting Hercules Cement in cloth to dealers: Lehigh Valley, $3.50; Hudson, $3.60.

"10c. per barrel discount for payment in full within ten (10) days from date of invoice.

"We will only use the two basing points above for quoting and all points not covered by these two basing points, you will quote Lehigh Valley base plus actual freight from Hercules to destination. You will note that the above prices include sacks at 25c. each and same will be returnable at 25c. each subject to our usual conditions governing returned sacks.

"Shipments in paper will be charged at 70 per barrel less than the above prices.

"—— ——, Sales Manager.

"P. S.—The above is for your information only and does not in any way affect previous instructions as to quoting or accepting new business either on contract or for stock.

EBG/WFO."

Mr. Kind, Mr. Bailey, Mr. Holcombe, Mr. Grebe, Mr. White, Mr. Bedell, Mr. MacCarey, Samuel H. French & Co.

[fol. 2943] DEF'TS' EX. No. D-779

"Representatives' Notice

No. 112

Prices

"Confirming letter of July 15, 1920, all prices are withdrawn. In accordance with instructions issued on several occasions, we will accept shipping orders from Dexter dealers only.

"Effective this date, a price based upon $2.50 per barrel plus packages and freight shall be placed upon one carload at a time for each Dexter dealer. Orders for additional quantities shall be marked and billed at market price at time of shipment.

"The phrase 'market price at time of shipment' means the lowest price in effect within 15 days prior to date of shipment of order. No notice of advance or formal quotations may be issued except on request by a Dexter dealer.

"Discount

"The cash discount on all cement billed at the above mentioned base price or higher, shall be ten cents (10c.) per barrel if paid within ten days from date of invoice.

"Differential

"Confirming instructions issued at various times this year, there is no differential on sales of Dexter Portland Cement. Quotations and sales may only be made to Dexter dealers. If prices or quota-

tions are requested by consumers who are regular buyers of Dexter cement, the nearest dealer qualified to govern or control the anticipated business shall be consulted and such quotations made only with his consent. It is preferable that the dealer should quote prices rather than that we should do so on behalf of the dealer.

"Other Bases

"No other base price may be used excepting the $2.50 base price Lehigh Valley mentioned in the first paragraph of this notice. You will therefore disregard all other freight rates excepting those given under column L.V. in the Freight Rate Book.

—— ——, Manager of Sales. RWH/C."

[fol. 2944] DEF'TS' EX. No. D-780

"Nazareth Cement Company

"Boston Office

Date: 7/28/20.

"To Mr. J. A. Horner, Nazareth, Penna.

"For your information, the Edison Company is out today with a new quotation on which the Consumer's price at Boston is $5.52 in 25c. cloth sacks, with a cash discount of 10c. per bbl.

"The dealers' price is figured out as follows:

"Consumers' Price	$5.52	
Cloth bags	1.00	
		$4.52
Dealer's Commission		.45
		$4.07
Freight		.57
		$3.40

"Very truly yours, John W. Ramsay."

[fol. 2945] DEF'TS' EX. No. D-781

Telegram

"New York, Oct. 15, 1920.

"Mr. H. A. Meech, 210 Genesee St., Rochester, N. Y.:

"Effective today mill base two fifty plus LV rate and bags discount ten cents per bbl. cash ten days. Take no new business without authority from this office.

"Pennsylvania Cement Co."

[fol. 2946] DEF'TS' EX. No. D-782

"July 28, 1920.

"Mr. Whitten, Mr. Mathesius, Mr. Furbush, Mr. Kearney, Mr. Bigbie, Mr. Eschenbrenner, Mr. Wight, Mr. Kahn:

"After an Executive Meeting held on the 26th inst., when a thorough analysis was made of the present day costs, it was found necessary to establish a price of $3.50 per barrel bulk at the mill, cloth bags to be on basis of 25 cents each or at the rate of $1.00 per barrel; paper bags at the rate of six and one-quarter (6¼) cents each, or 25 cents per barrel.

"As we have been unable to make any appreciable impression on pending shipping instructions at the mill, we are not in a position to take on any new business. Therefore, our new price basis in reality has no effect except as applying on such dealer warehouse orders as may be tendered us, and which in the regular course of things, are scheduled for shipment in the near future.

"What the price will be next week or next month, I do not know; it may be higher or may be lower, depending entirely on conditions. As I said before, the $3.50 bulk price is based on present costs and will be increased or decreased as conditions warrant.

"We have a number of warehouse orders on file that were placed on basis of Edison price in effect at time of shipment. When their time for shipment is reached, we will then notify customer what our price is. Until you are advised to the contrary, it will be as stated above, viz., on basis of $3.50 bulk at our mill.

"Please acknowledge receipt and advise your understanding.

RAW./J. N."

[fol. 2947] DEF'TS' EX. No. D-784

"October 1st, 1920.

"Change in Price of Edison

"Effective this date, price on Edison will be based on $3.00 net Lehigh Valley plus 10% dealers' trade discount, which applies on destination price exclusive of package; cloth bags to be on basis of $1.00 per barrel; paper bags to be on basis of 30c. per barrel.

"Any orders accepted will be subject to indefinite delay in shipment, price to be that in effect for Edison Cement when shipment is made."

[fol. 2948] DEF'TS' EX. No. D-785

Memorandum to Messrs. Bruff, Wetzler, Kessel, Willbrand, La Rue

"October 14, 1920.

"Having communicated with all of you today with reference to our price on Edison Cement I have received the one conclusive opin-

ion from all of you that we should immediately reduce our mill base price to $2.50.

"From information which I obtained yesterday and further encouragement which I have received today from our coal people, with regard to our supply on contract, I believe that our coal costs are gradually going to reduce. These costs may not have any very beneficial effect as far as Cement costs go for the next thirty days. However, I believe that you will all be better able to meet market conditions with the price of $2.50 Lehigh Valley, effective immediately, and after having talked with Mr. Mambert, we all agreed that the price should be made effective Monday, October 18th.

"This price, of course, refers only to orders subject to Edison price at time of shipment and it is not for general quotation on future business, as we have not as yet set any price for future quotations.

"Can you suggest anything further which we can do to increase our average net price?

"Very truly yours, W. D. Cloos.

[fol. 2949] DEF'TS' EX. No. D-786

"Change in Price of Edison

"October 18th, 1920.

"Effective this date, price on Edison will be based on $2.50 net Lehigh Valley plus 10% dealers' trade discount, which applies on destination price exclusive of value of package; cloth bags to be on basis of $1.00 per barrel; paper bags to be on basis of 30c. per bbl.

"Any orders accepted will be subject to indefinite delay in shipment, price to be that in effect for Edison Cement when shipment is made."

Phœnix Portland Cement Co.

Philadelphia

Newark Office, October 20, 1920.

In re Cement Quotation

"Mr. Charles H. Cox, Phœnix Portland Cement Co., Philadelphia, Pa.

"DEAR MR. COX: The writer developed yesterday that the Edison Portland Cement Company has adjusted its price as of the 18th inst. to the $2.50 base. I understand that they are still in a bad way with regard to making shipments and are not offering any tonnage for contract.

"I knew you would be interested in this and am passing it along for your information.

"Yours very truly, D. Mackenzie, District Sales Manager."

[fol. 2951] DEFT'S' EX. NO. D-788

"October 14, 1920.

"Mr. Preston E. Bradlee, c/o Clinton Hall Hotel, Springfield, Mass.

"DEAR BRADLEE: We have decided to take on a considerable contract tonnage for next year, and you are authorized to take contracts which will run beyond July 1st, in fact which may run during the entire year. Be careful though that the contracts are not of a speculative character and are to cover work which has actually been let on a lump sum basis, and work which will go ahead. We wish to avoid taking contracts on which we will be obliged to reduce the price should there be any decline in price next year.

"It is not our idea of simply act- in a passive way in this matter, but to actually go after contracts, and as the season is growing very short, it will be necessary for you to work fast. I believe very few cement salesmen are now on the road but you may be sure that within the next couple of weeks they will all get started again. We must beat them to it, and so work fast for some real contracts to go in 1921, and be sure to submit to this office any inquiries of any character which you may have.

"Yours very truly, Charles H. Cox."

Copy to Brookline.

[fol. 2952] DEF'TS' EX. NO. D-789

"Bath Portland Cement Co.

"Phila., Pa., November 6, 1920.

"Re Price Instructions

"MR. FRANKS: Please note copy of letter sent to all salesmen.

W. G. D.

"DEAR SIR: On account of our company being one of the few that are quoting mill prices, we find that in order to avoid any misunderstanding with our customers it will be advisable for us to again quote delivered prices as was our custom prior to the last advance in freight rates. Therefore, in the future, quote only delivered prices basing your prices on the new freight rates now in effect as shown by the schedule mailed you sometime ago. You understand in order to secure the freight rate per barrel, including war tax, you will have to look up the old freight rate in your freight rate book and then refer to the schedule showing the advance.

"In quoting and selling at a delivered price, we will advise our customers the present freight rate, including war tax, per barrel, and make it clear to the customers, that this price is based on the freight rate mentioned. Any increase or decrease in the freight rate over or below that shown in our quotations or orders will either be charged against or credited to the customer, providing the correct rate is either above or below that which our records show.

"It is going to be sometime before the freight rates are finally adjusted, and in the meantime we must be very careful in protecting our own interests as regards this matter.

"Very truly yours, Bath Portland Cement Co. —— ——,
Second Vice-President. W. G. D./H."

[fol. 2953] DEF'TS' EX. No. D-791

"Lehigh Portland Cement Co.

"Sales Department, Official Communication

"NOTE.—Answers to these questions must be mailed to me Saturday of each week. This is to keep in close touch with conditions in the field.

"B. L. Swett, Eastern Sales Manager.

"Week ending Saturday, Nov. 27, 1920. Salesman: H. H. Beans. Office: Allentown.

"1. What information regarding competitors or quotations did you get during the week?

"Our dealer at Shippensburg, Pa., claims they received a quotation from the Giant P. C. Co. of five cents lower per barrel, than our price.

"2. What special inducement of any nature are competitors offering in your territory?

"None, except prompt shipments.

"3. State what disadvantages, if any, caused by the actions of this company you are laboring under in meeting competition.

"None.

"4. Give names of competitors' salesmen that you have met during the week and information dropped by them.

"None.

"5. Give the complete history of any complaints that you may have on competitors' brands of cement.

"None.

"6. Are your customers satisfied with our deliveries, packages, handling of complaints sent to us, tracing of cars when requested by them, etc.? If not satisfied give names of dissatisfied customers and state reason of dissatisfaction.

"Yes.

"7. What suggestions have you for improving our methods of handling business in your territory?
"None.

"8. Do you know of any contemplated work in your territory that is not followed up by inquiry?
"No.

"9. What is your opinion as to the outlook for business in your territory during the next thirty days?
"Slowing up, if present weather continues.

"10. What seems to be the opinion of the trade on our advertising? How can we improve it?
"Good.

"Remarks: This part of the territory covered this week, looks good, and little or serious kicks, except at Phœnixville, Pa., where I fear the Benjamin Hdwe. Co. are lost, and are using Phœnix Cement extensively. However, a party by the name of Jesse Walker lives here, and is interested in that Company, which may have some bearing on the matter. However, time may tell better our future.
"Yours very truly, H. H. Beans, Salesman."

"To John R. Morron, Tallahassee, Fla.:

"Mr. Burch advises over the telephone that we have heard rumors from the trade in the west that the Lehigh Company have reduced its prices at Mitchell Oglesey and Newcastle and that they are meeting Universal prices at points where such prices are lower than their own basis. We are still checking with the trade in the West to secure positive information stop So far we have not found any recent Lehigh Valley but are close in touch with dealers and will

undoubtedly have prompt information if any change occurs in the quotation which dealers receive.

"L. G. McConnell."

[fol. 2957] DEF'TS' EX. NO. D-797

"The Atlas Portland Cement Co.

New York

"For the attention of Mr. John R. Morron.

"New York, Dec. 3, 1920.

"I sent you a night letter last night reading as follows:

"'Lehigh quotations reported by dealers figuring back to $2.30 Valley, $2.40 Hudson, $2.05 Pittsburgh stop Pittsburgh rates make shrinkage necessary from Valley as far East as Philadelphia, Northern New York, and few New England points stop Are protecting trade without general issue quotations stop Have talked with Mr. Burch and will write you fully in morning.'

"We have not sent out quotations for two or three reasons.

"Up to the present time the dealers have not reported any change in Alpha prices or in those of several other competitors. They have reported changes by the Lehigh, Edison, Coplay, Bath, Nazareth and Vulcanite. We are not losing any business by not having written quotations in the hands of the trade, as we are meeting representative competitors' prices down to a satisfactory minimum.

"There is also the question of our strategical position. If we meet the prices of the Pittsburgh mills, which figure back to $2.05, and make our own price $2.30, the territory where our maximum will apply will be very small. We will have to shrink in order to meet competitive prices in such points as Philadelphia, Baltimore, Washington; Rochester and Syracuse, New York, and a few points in New England. If we set our maximum price at $2.05 Northampton, the Pittsburgh competition will have to shrink at all points east of Altoona and Johnstown, Pa., and Buffalo, New York.

"We are of the opinion that competitive conditions and the supply of cement, as compared with the demand for it during the winter months, may result in some of our Lehigh Valley competitors making prices lower than $2.30.

"Mr. Burch wanted me to write you along the above lines so that you would have a general outline of the present situation and could wire us your advice.

"Mr. Burch will be in the office on Monday and we figure that this letter should reach you on that date.

"Yours very truly, L. G. McConnell.

"P. S.—The prices which the Lehigh Company are quoting figured back to $2.05 Pittsburgh carry a 10¢ cash discount. The Universal

Company's prices, figured back to $2.00, Pittsburgh, carry only a 5¢ cash discount.

LGM:EL."

Sales Department, Official Communication

NOTE.—Answers to these questions must be mailed to me Saturday of each week. This is to keep is close touch with conditions in the field.

B. L. Swett, Eastern Sales Manager.

Week ending Saturday Aug. 30, 1919. Salesman: W. W. Harder. Office: Richmond.

1. What information regarding competitors or quotations did you get during the week?
Saw and mailed a quotation made by Edison to Janney Marshal of Fredericksburg, Va., which was 15 cents lower than ours.

2. What special inducement of any nature are competitors offering in your territory?
None.

3. State what disadvantages, if any, caused by the actions of this company you are laboring under in meeting competition.
None.

[fol. 2971½] 4. Give names of competitors' salesmen that you have met during the week and information dropped by them.
Did not meet any to speak of. Saw Dew & Johnson of Atlas when I talked with Mr. Colbert on Alexandria County work.

5. Give the complete History of any complaints that you may have on competitors' brands of cement.
No complaints.

6. Are your customers satisfied with our deliveries, packages, handling of complaints sent to us, tracing of cars when requested by them, etc.? If not satisfied give names of dissatisfied customers and state reason of dissatisfaction.
No dissatisfaction expressed.

7. What suggestions have you for improving our methods of handling business in your territory?
Nothing to offer.

8. Do you know of any contemplated work in your territory that is not followed up by inquiry?
No.

9. What is your opinion as to the outlook for business in your territory during the next thirty days?
Good.

10. What seems to be the opinion of the trade on our advertising? How can we improve it ?

Very good. Nothing to suggest.

Remarks: ——.

Yours very truly, W. W. Harder, Salesman.

Glick. Sep. 3, 1919.

The Atlas Portland Cement Company

October 20, 1920.

Mr. F. B. McKenna:

Please advise the districts that effective at once, they are to have a rubber stamp prepared with the following, to be used on all of our specific work quotations:

"Any shipments made during 1921 on a contract placed under this quotation will be at the current destination price on Atlas Portland Cement on the date of shipment, if such price is below the destination price herein mentioned."

They should also have the following clause written into all contracts which we enter into until further notice:

"Any shipments made during 1921 on this contract will be at the current destination price on Atlas Portland Cement on the date of shipment, if this price is below the contract destination price herein mentioned."

In case any customer with whom we now have a contract brings up the question of guaranteeing against a decline, the districts are to take the matter up with the general office, giving all details, and they will receive instructions as to just how to handle it.

LGM/ES.

[fol. 2973] [File endorsement omitted]

[fol. 2974] IN UNITED STATES DISTRICT COURT

OPINION—Filed Oct. 23, 1923

[Title omitted]

[fol. 2974½] William Hayward, United States Attorney, Solicitor for the Government.

James A. Fowler and Roger Shale, Special Assistants to Attorney General, of Counsel, for Government.

Archibald Cox, Solicitor for Defendants, John W. Davis, George T. Buckingham, Louis H. Porter, Thurlow M. Gordon and Leland B. Garretson, of counsel.

KNOX, D. J.:

The Cement Manufacturers Protective Association, the dissolution of which is here sought by the Government, came into existence in January, 1916. The outline of the contemplated activities of the Association was laid before the representatives of a number of the corporate defendants at a meeting in New York and was accompanied by this statement of the Chairman:

"the idea of this thing is cooperation. * * * We all agree that the necessity of cooperation is acknowledged by everybody in the industry. The only question now we have to determine is how we can best make use of cooperation * * *".

The adoption of a Constitution and by-laws followed. I quote Article III of the former:

"The objects of the Association are the collection and dissemination of such accurate information as may serve to protect each manufacturer against misrepresentation, deception and imposition, and enable him to conduct his business exactly as he pleases in every respect and particular, free from misdirection by false or insufficient [fol. 2975] information concerning the matters following, to wit:

(a) Information concerning credits.

(b) Information concerning contracts which have been made for the delivery of cement, sufficiently complete to enable the manufacturer to protect himself against spurious contracts and like transactions induced by misrepresentation.

(c) Information concerning freight rates on cement.

(d) Statistical information as to production, stocks of cement and clinker on hand, and shipments."

Article VIII of the same instrument further declared:

That "No member of the Association shall enter into any arrangement, agreement or understanding of any nature or kind whatsoever, the object of which is to restrain trade, limit competition or accomplish any purpose contrary to the spirit or letter of the law or contrary to the objects of the Association, as set forth in this Constitution, and membership in the Association shall be recognized as implying that the member is absolutely free to conduct his business exactly as he pleases in every respect and particular."

"Full and complete minutes of all matters discussed at any meeting of the Association shall be kept and such minutes, together with all records, files and correspondence of the Association, shall be preserved and held open to any public official or other person who may have any legitimate reason for desiring to be completely informed concerning any or all the activities or transactions of the Association."

[fol. 2975½] The organization elected a President, Vice President, Secretary and Treasurer, and monthly meetings of the members were provided for. The Association had power

"to employ such persons, incur such indebtedness, and fix such assessments as may appear necessary to carry out" its objects.

All assessments were to be distributed among and paid by the members pro rata according to shipments during the preceding year from or into the territory covered by the service of the Association. Section 8 of the by-laws imposed the following obligations upon the membership:

"On or before the fifth day of each calendar month, each member shall forward to the Secretary the following:

(1) A statement of all accounts outstanding sixty (60) days or more and unpaid, giving the name and address of the debtor, total amount unpaid, and the time overdue specified by months.

A statement of all bills receivable on hand, giving name of purchaser, amount, date payable, and detail of account covered by note.

A list of accounts in attorneys' hands for collection.

(2) A statement of contracts which have been made and are in effect on the last day of the preceding calendar month, giving the following information with respect to each contract, namely, date of contract, the purchaser, the consumer, a full description of the work upon which the cement is to be used, the amount contracted for and amount yet to be delivered, the price, and the expiration date of contract. In addition to the foregoing monthly statements of contracts, as contracts are made during the month, the Secre-[fol. 2976] tary shall be notified as soon as possible.

(3) A statement of all contracts cancelled or reduced in amount during the preceding month.

(4) A statistical statement of production and shipments during the preceding calendar month and stock of cement and clinker on hand on the last day of the month.

Upon the receipt of the foregoing monthly statements, the Secretary shall forthwith put all the information contained therein in convenient form as directed by the Association and distribute the information thus prepared to the members reporting.

The Secretary shall also transmit the information thus prepared to the person performing corresponding duties in any other Association, collecting and distributing like information within the purview of the Constitution, and receive and distribute to the members of this Association such information transmitted from such other Association, as may be from time to time directed by this Association.

The Secretary shall prepare and distribute among the members a complete schedule or schedules of freight rates, on cement, giving the rates for rail, water and rail and water shipments. Each

member shall from time to time notify the Secretary of all changes of other facts of importance connected with such rates. The Secretary shall immediately advise all members of changes in freight rates by issuing supplements, revisions or otherwise, as may be most convenient."

With the preliminaries of organization out of the way, the proposed plan of procedure was put into operation. An elaborate sys- [fol. 2676½] tem of about forty forms, upon which various reports were to be made and distributed, was devised, and members were supplied with such a covered reports to be made by individual companies. Thereafter, they were regularly used. As and when the Secretary of the Association received reports from individual companies, he made appropriate tabulations, and forwarded them to the interested parties.

Before undertaking a discussion of the various reports, it may be well to state that when the Association was formed, most of its members were already pursuing certain trade practices, more or less uniform, among which were the following:

1. Selling cement f. o. b. point of delivery.

2. Allowing a differential between prices quoted dealers in cement and those quoted contractors and other consumers of cement.

3. Charging purchasers of the cement for bags in which the product is shipped.

4. Allowing credit for bags returned to manufacturers in good condition.

5. Using basing points in quoting prices.

6. Including in all quotations for the sale of cement of the freight rates from a basing point to the place of delivery, and this, even though rates of transportation by private conveyance from mill to delivery point might be less than the published rail traffic.

7. Granting trade discounts.

8. Limiting the time within which quotations might be accepted, and deliveries made.

9. Making charges for bin test.

10. Making specific job contracts for future delivery.

[fol. 2977] Now, it may be conceded, as contended by defendant, that some of the foregoing practices mean nothing more than that the elements entering into a quoted market price have been separately listed. This being so, I think that all of defendants realized that insofar as such practices were uniform, and so continued, there would be less chance of any of the elements being so used as to effect quotations for cement as expressed in dollars and cents. Each company had a vivid recollection of a ruinous price war that had been

waged a year or so before, and none of them wished for it to break out afresh. The time was ripe for an association wherein the danger of competition as to any of the foregoing particulars would be reduced to a minimum.

With this digression, I return to the exchange of the information contemplated and provided under the Association's plan.

The furnishing of information by the individual companies with respect to Item 2 of Section 8 of the by-laws, above quoted, related solely to what are known as specific job contracts. These are agreements whereby a manufacturer is to deliver in the future the cement to be used in a specific work, such as a particular building or road, and the obligation is that the manufacturer shall furnish, and the contractor shall take, only such cement as is required for or used for the specified purpose.

In the year 1921, such contracts covered about thirty per cent of the annual cement production of all of the defendant corporations. That more and more of the commodity is annually being sold under these contracts is apparent, inasmuch as in 1919, but sixteen per cent [fol. 2977½] of the production was applicable to them, while in 1920, the percentage had increased to twenty-five per cent.

When such a contract was closed, the manufacturer either immediately, or a few days thereafter, advised the Association of the contract number, its date, the name and address of the purchaser, an identification of the work, the contractor's name, the number of barrels, the price, the delivery point, and the date upon which the contract would expire. Upon receipt of this information by the Secretary, it was at once sent to each of the members. As and when the contracts were completed, reduced in amount, extended or cancelled, a like notification went to all members. If further information was desired, it could be had upon request.

The Association's daily reports were accompanied by a summary of previous reports, in which was set forth the number of new specific job contracts received for that day and to date; the prices at which the contracts were written; the number of barrels contracted for as of that day and to date, the number of barrels cancelled as of that day and to date, together with all reinstatements, increases or decreases in barrels of that day and to date.

In addition to the foregoing, a quarterly report was issued wherein every specific job contract being carried by all the companies was set forth.

A monthly summary, regularly issued, indicated the companies' commitments for cement in the several states.

Other information, furnished and distributed as above, related to the quantity of cement on hand, the quantity of clinker produced, (clinker represents that stage in the manufacture of cement which immediately precedes the production of the commodity in merchant- [fol. 2978] able form), cement ground, all cement shipped, whether for dealers or upon account of specific job contracts, and clinker in stock. Reports embodying these details also showed the percentage of decrease or increase in the various items as compared with similar months and periods in the preceding year. They further disclosed

the number of barrels of cement shipped by one company for the account of another.

Reports were made of the delinquent accounts of customers, showing their names and addresses, the ledger balance, and whether the accounts were two, three, four or more months old. If the account had been given to an attorney for collection, the fact was noted. Summary reports went to the members at monthly periods.

The greater portion of the cement sold within the Eastern States is shipped in cloth bags, each bag containing one-quarter of a barrel of cement. The bags are usually charged to the purchaser, at ten cents. For each one returned to the manufacturer in good condition, the purchaser is allowed a rebate of ten cents.

The experience of each company in respect to bags returned was of interest to all others and this incident of the business was the subject matter of more or less elaborate statistics.

Beyond what has been stated, the Association engaged in the activity of compiling freight rates for the carriage of cement from certain "mill bases" used by the defendants to the various cities and towns within the North-eastern portion of the United States.

As previously said, each manufacturer of cement sells its product f. o. b. point of delivery, and ordinarily will not quote a price f. o. b. its mills. The record indicates a marked uniformity in the price [fol. 2978½] at which cement was offered by the various defendants at any given time. This uniformity, the Government charges, is brought about in part, at least, by the use of books distributed to the Association membership and containing the freight rates per barrel of cement from mill basing points to destination.

The charge is vigorously denied by defendants and thus there is presented one of the outstanding features of the case.

The freight rates books standing alone, and insofar as they merely record a compilation of lawful freight rates, are harmless. Their vice, if such it be, resides in the fact that there is a concert of action upon the part of defendants in so using them that all prices quoted are for delivery at the point required by the purchaser, and that no cement will be sold in such manner as will permit a purchaser to take advantage of cheaper transportation charges than are required to be paid for the shipment of cement by rail. In extenuation of the practice, it is said, that this method of marketing cement is a trade custom which came into being before the formation of the association; that it results from the independent and uncontrolled action of each manufacturer, and is, in no way to be attributed to agreement, or any activity, of the association. Very probably there is no agreement now in force by which such practice is to be followed. The custom, however, was at one time the subject of an agreement to which thirteen of the corporate defendants were parties, viz;—the Articles of Association of Licensed Cement Manufacturers, dated June 30, 1909.

[fol. 2979] That agreement, whatever may have been the justification for its existence, obligated each licensed dealer named therein to observe certain practices, which if they were now the subject of con-

tract, would without doubt entitle the Government to the relief sought. It is not without interest to note the similarity existing between the uniformities and facilities now availed of by defendant corporations, and the practices observed by a number of them under the license agreement, and which seem to have then been regarded as helpful, if not essential, in an endeavor to maintain prices and to apportion territory. The similarities are:

1. Periodical reports relating to production and shipment.

2. Price quotations for delivery of cement at destination.

3. Uniform discounts to dealers.

4. Uniform discounts to consumers.

5. Uniform terms of payment.

6. Uniform charges and allowances for bags, with the requirement of reports in reference thereto.

7. Use of basing points for the calculation of freight rates.

8. A uniform period within which quotations should be in force, and delivery made.

9. The use of a book to be used in quoting prices, and which included freight rates from shipping points to places of destination in the Northeastern States, and which were computed and published by the Association.

Under the present Association, there is no method provided for disciplining and penalizing members for a departure from the foregoing practices, as was the fact under the licensing agreement. Neither is there now any compact that cement shall not be sold below a specified price. It is true, however, that departures from present uniformities and delays in making reports are not favored. This is borne out by statements made at meetings of the present association when some of the practices gave rise to discussion.

For instance, the Chairman of the meeting, held May 15, 1916, asked that contract information be reported at the earliest minute, calling attention to the fact that the members were sufferers from any delay. One person suggested the imposition of a fine upon companies which did not send in their reports by the fifth day of each month. This proposal, however, was never put into effect.

The question as to whether the manufacturer of cement should allow a discount of five cents per barrel to customers who did not pay their bill within thirty days gave the persons attending Association meetings considerable concern. After much discussion, the President said that it was the consensus of opinion that quotation forms should be changed so that no discount would be made to a delinquent debtor, saying also, that the decision was not for the Association but for the individual companies.

At the October meeting in 1916, it was resolved, "To make * * * statistics more complete, and that each member report to the Secretary the annual productive capacity of his operation, and that the Secretary tabulate and send to each member a copy of the tabulation."

The resolution was complied with. It is argued by defendants that statistics having to do with the production capacity of the sev- [fol. 2980] eral mills were in round figures, and had no relation to actual production or shipment, and that no attention was paid to them. Granting this to be true, each member of the Association was supplied from time to time with statistics of actual production and shipments, was enabled to gauge the probable output of each mill from a practical, rather than a theoretical standpoint.

The desire for uniformity in trade practice is emphasized by the attitude assumed towards reports having to do with allowances for returned bags. At a meeting of the Association upon April 17, 1916, a representative of the Giant Company had this to say:

"If a man returns 1,000 bags and is dealing with three companies, it would be more or less of a rebate if one company were giving him full credit for worthless bags and another one deducting a percentage of bags that were worthless."

The Vice President of the Vulcanite Company commented as follows:

"Some companies were giving full credit. That was the information that has been reported, and that in effect practically meant a rebate—that is, giving a customer credit for bags which could not be used again, and it might be interested from the credit standpoint to know just what the general practice was in that respect."

At a meeting held in June, 1916, the same Vice President of the Vulcanite Company remarked:

"We want our practice to be the same as the others."

[fol. 2980½] Similar colloquies took place at other meetings as to the possibility of discounts and extentions of credit being used for the purpose of rebating.

In my judgment, it was something more than a desire for statistics, as such, that was responsible for the Association undertaking to find out from the several companies whether returned bags were first cleaned and then counted, or were first counted and then cleaned. It was important that the practice be as nearly uniform as possible, so that the bag report would reflect the shading of prices that might be engaged in by a manufacturer. A disclosure of what was being done in making allowances for bags, while it could be used for competition, was, I think, more likely intended to impose a restraint upon any company that was shading prices.

Reverting to the exchange of statistics, in which the selling price of specific job contract cement is sold, it seems apparent that such

quotation will also reveal the market prices for cement sold to dealers. The evidence is that upon a given day the price of cement to dealers is ten cents less per barrel than that sold upon the same day to a consumer for use in a specific job. Each manufacturer is thus apprised of the amount being charged for cement for all purposes by its competitors. From reports of stock on hand, each member received, in effect, a forecast of his competitors' view of the immediate market, and that there might be no misconception as to actual business being transacted by any one mill, the reports were careful to specify the amount of cement which one mill sometimes shipped for another.

The care manifested in this regard brings me to a consideration of the practice under which manufacturers protected themselves [fol. 2981] against the diversion and "misuse" of cement under specific job contracts. Only under such contracts is there any obligation upon a manufacturer to deliver cement at a specific price over any extended period of the future. There was accordingly great effort to see that no specific job cement was diverted and used otherwise. If so, it might enter into competition with cement thereafter sold by the company at then current prices. Then, too, if more than one person, say a contractor putting in a bid for work, had covered himself for the quantity of cement necessary for a certain specific job, and thereafter did not obtain the contract for the work, the manufacturers were desirous that such contract be cancelled lest it confuse their estimate of outstanding commitments, and also that the cement thus contracted for, if delivery should be asked, should not affect a later market.

For this reason, specific job contracts provided for "the full Portland cement requirements of the following described work" and stipulated that the cement should not be used for any other purpose. Contracts of this character were substantially uniform among all the companies.

In order to protect the manufacturers against any alleged misuse or diversion of cement, the Association employed a force of checkers or auditors. These men were familiar with building construction, and it was their duty to investigate specific job contracts, to ascertain what contractor had secured a particular work, the amount of cement that probably would be used in the work, and whether any cement obtained for such work was being used for other purposes. Upon [fol. 2981½] obtaining the report of the checker, the Association would communicate the same to the manufacturers and such of them as had specific job contracts with persons who were not actually to furnish cement to the job would cancel. Also, if the estimate of the amount of cement to be used seemed excessive, a reduction in the requirements of the contract would generally take place. The action of the companies cancelling or reducing commitments would, at once, be made known to each of the others. Upon one occasion, cancellation amounted to no more than one-fourth of a barrel of cement.

Of course, if a company wished to recognise an agreement made with a contractor or person who had expected to supply cement to a specific job, and who did not get the work, but was willing to take

the cement, notwithstanding, it might do so. But my distinct impression is that one of the prime reasons for exercising such strict supervision over specific job work, and in reporting the cancellation of infinitesimal quantities of cement, was to exert a moral compulsion upon a company, which was inclined to recognize a contract such as I have just referred to, and to make assurance doubly sure that over any future time there would be no "free" cement.

The record, as I have said, contains much matter to indicate that at any given time the prices at which the various companies sold cement were uniform; and that when one company did change its quotation, the other companies delayed but little in falling into line. Considerable argument has been made to the effect that uniformity of price is evidence of perfect competition, and that the record abundantly proves the defendant corporations to be real and vigorous [fol. 2982] competitors. I shall not undertake a discussion of the dollar and cents quotations of cement, save to say that since the Association began to operate, there has been a uniformity and stability in such quotations that prviously did not exist. As was testified, the determining factor upon which a cement contract would be given to one company ever another, was frequently nothing but the personality of its salesman.

Competition, as commonly understood, includes the more material elements of prices and terms, especially, I should think, in the sale of a standardized commodity such as cement, where considerations as to the superiority of one brand over another have all but been eliminated. Prices, of course, will exhibit some tendency towards uniformity, in that even a necessitous seller will not make a more favorable price than competitive conditions force him to take. And, it may be, as economists say, that prices for a standardized product will actually become uniform, and will remain so over substantial periods of time, where competitive conditions are perfect. The fact is, however, that so long as there is a marked difference in production costs, in the financial necessities of manufacturers, in the location of mills as respects active markets, and there is less than a capacity production by all manufacturers who desire to sell cement, it is reasonably to be expected that there will be a difference in the inducements to be offered to prospective purchasers. In the particulars just mentioned, the defendant corporation(s) (sic) are not similarly situated, and if such similarity be a prerequisite of perfect competition, there can be none in this industry. If, under truly competitive conditions, the prices should upon occasion become uniform, I [fol. 2982½] seriously doubt if they would long remain so. Producers would not be content with a situation wherein the field of competition was limited to the personality of the salesman representing his own company and that of his rivals.

The thought that the exchange of statistical information between the defendant companies was not for really competitive purposes, receives some support from what was said at some of the Association meetings. It seems that upon a few occasions, salesmen of one or more companies obtained possession of some of the records and

used the same in taking business from persons who had previously patronized other manufacturers.

When word of this came to the Association the Chairman expressed himself in the following language:

"When that information in detail is furnished to contractors and dealers, which has been done unquestionably, it not only detracts from the value of the information for the purposes the information is intended to cover, but it also makes very common the work which we are doing, and your committee wants to very strongly recommend that that information be used in a confidential way for the purpose of enlightening you as to the facts regarding contracts that are taken; that the information should not be given out promiscuously in any way that would unquestionably jeopardise the continuance of the furnishing of such information."

It was added:

"You can evidently see that the information given dealers would not be used in the same way that we handle it ourselves."

[fol. 2983] "They use it right away as a basis to secure business. They use it in an entirely different way than we use it. They are not interested as to what contracts are filed in their town unless they can secure some tonnage from the information they get from us."

He proceeded:

"There is another leak which I think usually exists so far as this information is concerned, and that is, it is very possible that a few of us are not careful enough as to where we keep our reports. Now I found a tendency of salesmen coming in and the first thing they wanted to do was to go over the contract reports and look them over and then they would go out and spread that information around everywhere, and that is going to hurt. * * *"

Still later in the discussion this was said:

"Yes, we had no thought or intention of suggesting any specific method other than we have thought the information should be used as information for the executives of the companies in order for them to check the operation of their salesmen and not furnish the information to their salesmen which, as a rule, would be used in a manner which would not be in accordance with the desire of the executives. The whole purpose of the information is that those in charge of the sales can be more intelligently informed by reason of having the truth, but that does not mean that everybody down the line to the office boy has to have that information, because they do not all know how to properly handle it."

[fol. 2983½] As bearing upon the desires of the executives, I again refer to the Cement Dealers License Agreement of 1909. If it be

that the parties to that contract, and aside from any question of their good faith, thought it desirable for the purpose of maintaining prices and apportioning territory, that the information called for by the agreement should be exchanged, it is quite within the range of probability that the formation of the present body, under which practices and customs are disclosed, and, through the disclosure, inevitably tend to become and remain uniform, was intended to attain a similar object.

Counsel for defendants have argued that "ignorance is not a virtue, and knowledge and information are not a crime." The accuracy of the statement, as a general proposition, is not questioned, but ordinarily the sources of wisdom and of knowledge are open to all interested persons upon more or less equal terms. Here such was not the fact. The situation in this respect, which here existed, was in the main the counterpart of that condemned in the United States v. American Linseed Oil Co. et al. where it was said:

"With intimate knowledge of the affairs of other producers and * * * proclaiming themselves competitors, the subscribers went forth to deal with widely separated and unorganized customers necessarily ignorant of the true conditions."

The defendants knew that although there was no formal agreement to follow the practice of other manufacturers, such would be the result; for, to employ the words used in proclaiming the advantages of the Open Competition Plan discussed in American Column Co. v. United States, 257 U. S. 393:

[fol. 2984] "members do naturally follow their most intelligent competitors, if they know what these competitors have actually been doing."

There is, I take it, no need to find that the prices at which defendants sold cement during the period over which the Association has functioned, were excessive. Indeed, as compared with the rise in the prices of other basic commodities, it is possible to say that the quotations of cement advanced less than others. Nor can it be said that the Association overcame and destroyed all competition between the defendant manufacturers; upon many occasions, they were active in an endeavor to take business from companies associated with them. In some instances, they undoubtedly offered inducement to purchasers and thus secured orders that otherwise would not have been obtained.

But, upon the whole, and without further discussion of the great mass of evidence which goes to make up this record, I think that real competitive effort tended to become more and more feeble, that manufacturers by reason of the exchange of statistics, were equipped to regulate their production, and by common consent and a concert of action, did so, to the end that the cement supply would at all times be a lap or two behind the demand, and thus created higher prices. In enabling this to be done, the Association, its officers and

agents, together with its membership, materially limited the full and free operation of the contending forces of competition to which the public, under the Sherman Law, is entitled, and unreasonably affected interstate trade and commerce.

[fols. 2984½-2986] The Government may have the decree for which it asks.

October 23, 1923.

[fol. 2988½] Final Decree—Filed Dec. 13, 1923

Pursuant to a stipulation between counsel this cause came on to be heard on the petition and answer therein and the transcript of record in the case of United States v. The Atlas Portland Cement Company et al., which was tried in the criminal side of this Court beginning April 4th and ending May 26th, 1922, and was argued by counsel, and on consideration thereof and in conformity with the written opinion filed herein on October 23, 1923, it is ordered, adjudged and decreed:

1. That defendant Cement Manufacturers Protective Association is an unlawful combination of the defendant corporations in restraint of interstate trade and commerce in Portland cement in violation of the Act of July 2, 1890, entitled "An act to protect trade and commerce against unlawful restraints and monopolies," known as the Sherman Anti-Trust Act.

2. That defendant corporations by becoming and acting as members of defendant Cement Manufacturers Protective Association and defendant individuals by becoming and acting as officers thereof entered into and engaged in an unlawful combination in restraint of interstate trade and commerce in Portland cement in violation of said Act of July 2, 1890.

3. That defendant Cement Manufacturers Protective Association be and it hereby is dissolved, and defendant corporations and individuals are collectively and individually perpetually enjoined, restrained and prohibited from entering into, engaging in or carrying into further effect said combination, or any understanding or agreement constituting a part thereof, or any similar combination or organization having the same purpose and effect.

[fol. 2989] 4. That defendant Association and the officers and members thereof are collectively and individually perpetually en-

joined, restrained and prohibited from agreeing to make or receive and from making and/or receiving, pursuant to any agreement, reports of the following character and from collecting and disseminating through said Association, or other collective agency, the information specified in the following reports, or either or any of them:

(A) Reports by members to the Association giving details of specific job contracts, showing name of dealer, name of contractor, description of work, quantity sold, the price, quantity delivered to date, and balance to be shipped;

(B) Reports by members to the Association of changes in specific job contracts, i. e., increases, decreases and cancellations of quantities previously reported;

(C) Daily reports by the Association to its members summarizing the details of all specific job contracts filed with all members;

(D) Reports by members requesting further information about contracts taken by other members;

(E) Reports by checkers or inspectors giving the results of investigations of contracts about which information is desired;

(F) Reports by the Association to its members submitting checkers' reports on contracts under investigation;

(G) Reports by members expressing satisfaction with checkers' reports or requesting further investigation and pointing out possible discrepancies;

(H) Monthly reports by members to the Association giving in- [fol. 2989½] formation in detail as to the status of all contracts;

(I) Monthly reports by the Association to its members giving information in detail as to the status of contracts of all members;

(J) Quarterly reports by the Association giving the status of all specific job contracts on file with members, showing names of dealers, names of contractors, description of work, quantity sold, the price, quantity delivered to date, quantity cancelled, and balance to be shipped;

(K) Reports by members to the Association showing number of bags returned, the number accepted, and the number rejected;

(L) Reports by the Association to its members summarizing data concerning bags returned, accepted and rejected.

5. That defendant corporations are collectively and individually perpetually enjoined, restrained and prohibited from agreeing, among themselves, or with other manufacturers of cement, to cancel and/or from cancelling pursuant to such agreement contracts which may exceed, or may be believed to exceed, the actual requirements of specific construction work undertaken or definitely projected, or are duplicate contracts held by other manufacturers for cement intended

for the same construction work; and from agreeing with each other, or with other manufacturers of cement, to collect, and/or from collecting pursuant to such agreement and distributing among manufacturers of cement, information with reference to such contracts.

6. That defendant Association and the officers and members thereof are collectively and individually perpetually enjoined, restrained and prohibited from agreeing to make or receive, and from [fol. 2990] making and/or receiving pursuant to any agreement, reports of the following character and from collecting and disseminating through said Association, or other collective agency, the information specified in the following reports, or either or any of them:

(i) Reports by members to the Association giving the quantity of clinker burned, cement ground, cement shipped, clinker in stock, and cement in stock;

(ii) Reports by the Association to its members showing as to each member the quantity of clinker burned, cement ground, cement shipped, clinker in stock and cement in stock;

(iii) Reports by members to the Association giving total shipments during a specified period of time;

(iv) Reports by the Association to its members showing shipments by each member during a specified previous period of time.

7. That defendant corporations are collectively and individually perpetually enjoined, restrained and prohibited from agreeing with each other to compile and distribute, and from compiling and distributing pursuant to such agreement, so-called freight rate books showing freight rates on cement from any arbitrarily established freight basing point to the points of delivery throughout the territory comprising their market.

But this shall not be construed as prohibiting the defendants from maintaining or subscribing to a traffic bureau to furnish rates or rules of transportation that may be contained in any public schedule or tariff, but all rates furnished shall be the actual rates between points of actual shipment and delivery, and shall not be [fol. 2990½] based on any point or points other than those of actual shipment and delivery.

8. That nothing herein shall be construed as prohibiting defendant corporations from maintaining or subscribing to a credit bureau for the sole purpose of furnishing, upon specific requests, information as to the credit of persons and corporations purchasing, or attempting to purchase, cement, but the defendants are collectively and individually perpetually enjoined, restrained and prohibited from agreeing to refuse to make sales to particular customers and/or from agreeing upon circumstances or conditions which shall exclude customers from being extended credit.

9. That defendant corporations are collectively and individually perpetually enjoined, restrained and prohibited from hereafter agree-

ing among themselves or with other manufacturers of cement to do any of the following acts:

(a) To establish uniform mill base prices for their product:

(b) To establish arbitrary freight basing points other than the points from which shipments are actually made;

(c) To sell their product f. o. b. point of delivery exclusively;

(d) To establish uniform charges for bags, or uniform credits for bags returned in good condition;

(e) To establish a uniform rate of discount or uniform terms for payment of bills within a specified period;

(f) To limit the quantity of cement to be shipped to a dealer within a specified period of time;

[fol. 2991] (g) To prohibit the diversion or so-called misuse of cement sold on specific job contracts;

(h) To establish and maintain a uniform differential in the price of cement sold to dealers and contractors;

(i) To fix or suggest the amount of commission or profit dealers should be required to make in sales of cement;

(j) To regulate or limit the amount of production of cement, and/or the amount of stock to be kept on hand;

(k) To limit the time within which quotations on cement must be accepted and deliveries made, and to refuse to grant extensions in time of deliveries;

(l) To make changes in prices effective as of the date quotations are written, to avoid "price tipping;"

(m) To guarantee prices against decline;

(n) To make uniform charges for bin tests, and/or to require the purchaser to pay for such tests.

10. That nothing contained in this decree shall be construed as prohibiting any defendant from doing or performing any of the foregoing acts, or from selecting its own trade, or from disposing of its own product to such persons and on such terms as it may choose, if done individually and without combining, conspiring or agreeing with any other manufacturer of cement.

11. That the injunctions herein contained against defendant Association and the defendant corporation shall apply to and be binding upon such Association and corporations and their respective officers, directors, agents and employees and all other persons, firms [fols. 2991½ & 2992] or corporations acting under, for or in behalf of them or any of them, or claiming so to act.

12. That jurisdiction of this case is retained for the purpose of enforcing this decree and of enabling the United States to apply to the court for a modification or enlargement of its provisions on the ground that they are inadequate, and the defendants or either of them to apply for its modification on the ground that its provisions have become inappropriate or unnecessary.

13. That petitioner shall have and recover from the defendants its costs.

Jno. C. Knox, U. S. D. J.

Assented to as to form only.

James A. Fowler, Roger Shale, Counsel for United States.
John W. Davis, George T. Buckinghan, Archibald Cox, Counsel for Defendants.

[Title omitted]

[fol. 2993½] ORDER AMENDING FINAL DECREE—Filed Dec. 13, 1923

Jurisdiction of this cause having been retained for the purpose of enabling applications to be made for modification of the decree made and entered herein on the 13th day of December, 1923, on the ground that its provisions had become inappropriate or unnecessary; and it appearing that the defendant corporations and other manufacturers of cement have long been accustomed to assess and pay for the work of the national Portland Cement Association in promoting the use of cement, on the basis of shipments generally and into the States where special promotional work has been done, but the sixth paragraph of the decree entered herein December 13, 1923, may be construed as prohibiting the reports necessary to make such distribution;

Now, therefore, upon motion of Counsel for the defendants, and the annexed consent of Counsel for the United States of America and the defendants, it is—

Ordered, adjudged and decreed that the decree made and entered herein on the 13th day of December, 1923, be modified by adding at the end of paragraph 6 thereof the following:

Provided, however, that this shall not be construed as prohibiting the defendants from reporting and/or collecting annually at the close of the calendar year such information respecting shipments as may be necessary to enable the assessment of the several members for their proportionate parts of the several expenses of an association [fol. 2994] or collective agency engaged in lawful activities, and for no other purposes.

Jno. C. Knox, United States District Judge.

We consent to the entry of the foregoing.

James A. Fowler, Roger Shale, Counsel for U. S. John W. Davis, George T. Buckingham, Archibald Cox, Counsel for Defendants.

PETITION FOR AND ORDER ALLOWING APPEAL—Filed Feb. 9, 1924

Cement Manufacturers' Protective Association, The Atlas Portland Cement Company, The Allentown Portland Cement Company, Alpha Portland Cement Company, Bath Portland Cement Company, Coplay Cement Manufacturing Company, Dexter Portland Cement Company, The Edison Portland Cement Company, Giant Portland Cement Company, The Glens Falls Portland Cement Company, Hercules Cement Corporation, Knickerbocker Portland Cement Company, Inc., Lawrence Cement Company, Lehigh Portland Cement [fol. 2996] Company, Nazareth Cement Company, Penn-Allen Cement Company, Pennsylvania Cement Company, The Pœnix Portland Cement Company, Security Cement and Lime Company, The Vulcanite Portland Cement Company, E. P. Alker, C. Raymond Hulsart, Miss M. B. Phalen and Marion S. Ackerman, the above-named defendants, conceiving themselves aggrieved by the Final Decree made herein on the 13th day of December, 1923, and filed and entered in the office of the Clerk of this Court on the same day, and which said decree was amended on the fourteenth day of January, 1924, do hereby appeal therefrom to the Supreme Court of the United States and pray that their appeal may be allowed and a citation granted directed to the above-named Petitioner, United States of America, commanding it to appear before the Supreme Court of the United States, to do and receive what may appertain to justice to be done in the premises and that a transcript of the record, proceedings and evidence in said cause duly authenticated may be sent to the Supreme Court of the United States.

February 8th, 1924.

Archibald Cox, Solicitor for Defendants. John W. Davis, George T. Buckingham, Counsel for Defendants.

The appellants having filed an appeal bond in the sum of Two Hundred and Fifty ($250) Dollars, it is—

Ordered, that the foregoing Appeal of the defendants be and the same hereby is allowed.

February 8th, 1924.

(Sgd.) Henry W. Goddard, U. S. District Judge.

[Title omitted]

ASSIGNMENT OF ERRORS—Filed Feb. 9, 1924

And now come the above named defendants, and each of them, and say that in the record and proceedings of said Court in the above entitled cause, and in the final decree made and entered therein on the 13th day of December, 1923, there is manifest error, and for said error the said above named defendants, and each of them, assign the following:

[fol. 2999] 1. The Court erred in adjudging and decreeing that the defendant Cement Manufacturers Protective Association is an unlawful combination of the defendant corporations in restraint of interstate trade and commerce in Portland cement in violation of the Act of July 2, 1890, entitled "An Act to protect trade and commerce against unlawful restraints and monopolies," known as the Sherman Anti-Trust Act, and that the defendants by becoming and acting as members and officers thereof entered into and engaged in an unlawful combination as aforesaid.

2. The Court erred in dissolving said Cement Manufacturers Protective Association and enjoining the defendants from entering into, engaging in, or carrying into further effect, said combination, or any understanding or agreement constituting a part thereof, or any similar combination or organization having the same purpose and effect.

3. The Court erred in enjoining the defendants from making or receiving reports containing certain facts concerning closed contracts for future delivery of cement for specific construction work (known as "specific job contracts"), particularized in paragraph 4 of the final decree herein, and any of such reports.

4. The Court erred in enjoining the defendants from agreeing to collect, or collecting pursuant to agreement and distributing, information with reference to closed contracts for future delivery of cement [fol. 3000] for specific construction work (known as "specific job contracts") which exceed the actual requirements of the work or are duplicates of contracts held by other manufacturers for the cement for the same work.

5. The Court erred in enjoining the defendants from making or receiving by agreement, and from collecting and disseminating through a collective agency, information concerning production, shipments and stocks, as particularized in paragraph 6 of the final decree herein.

6. The Court erred in enjoining the defendants from agreeing to cancel, and from cancelling pursuant to agreement, contracts for future delivery of cement for specific construction work exceeding

the requirements of the work or duplicating contracts held by other manufacturers for the cement for the same work—particularly in that no such agreement or action pursuant thereto was shown to have existed or to be contemplated.

7. The Court erred in enjoining the defendants from agreeing to compile and distribute, and from compiling and distributing pursuant to such agreement, freight rate books showing freight rates on cement from any arbitrarily established freight basing point to points of delivery—particularly in that no agreement establishing arbitrarily or otherwise any freight basing point and no freight rate book showing rates from any arbitrarily established basing point was shown to have existed or to be contemplated.

[fol. 3001] 8. The Court erred in enjoining the defendants from agreeing to refuse to make sales to particular customers and from agreeing upon circumstances or conditions which shall exclude customers from being extended credit—particularly in that no such agreement was shown to have existed or to be contemplated.

9. The Court erred in enjoining the defendants from hereafter agreeing to do any of the acts constituting the customary practices of the industry, particularized in paragraph 9 of the final decree herein—particularly in that no such agreement was shown to have existed or to be contemplated.

10. The Court erred in not dismissing the bill of complaint.

Dated February 8th, 1924.

Archibald Cox, Solicitor for Defendants. John W. Davis, George T. Buckingham, Counsel for Defendants.

ORDER RE TRANSCRIPT OF RECORD—Filed March 1, 1924

This cause having come on to be heard at final hearing on the 13th day of February, 1923, upon the pleadings herein and upon the testimony, exhibits and stipulations presented and offered at the trial of the action now pending in this Court, wherein the United States of America is plaintiff and the Atlas Portland Cement Company, and others, are defendants, No. C. 29-49, and the said testimony, exhibits and stipulations having been considered by the Court in the determination of this cause, and a final decree having been entered herein on the 13th day of December, 1923, and the defendants having on [fol. 3010] the 8th day of February, 1924, taken an appeal from said final decree to the Supreme Court of the United States, it is,

Ordered, that the printed edition of said testimony, exhibits and stipulations, now on file, be considered and made a part of the record in the above entitled cause, and the Clerk of this Court is hereby authorized, in making up the transcript of record on said appeal to the Supreme Court of the United States, to include in said transcript a copy of the said testimony, exhibits and stipulations, or such part or parts thereof as the solicitors for the respective parties hereto may agree upon or the Court shall designate.

Jno. C. Knox, United States District Judge.

We hereby consent to the entry of the foregoing proposed order.

Wolff *v.* Wells, Fargo & Co., 115 Fed. 32..... 73, 76

SUPREME COURT OF THE UNITED STATES

OCTOBER TERM, 1924

No. 551

CEMENT MANUFACTURERS PROTECTIVE ASSOCIATION, THE ATLAS PORTLAND CEMENT COMPANY, THE ALLENTOWN PORTLAND CEMENT COMPANY, *et al.*,

Appellants,

vs.

THE UNITED STATES OF AMERICA.

BRIEF AND ARGUMENT FOR APPELLANTS.

This is an appeal under § 2, c. 544, of the Act of February 11, 1903, 32 Stat. 823, from a final decree (*R., p. 1809*) entered by direction of Knox, D. J., in the District Court for the Southern District of New York, granting a perpetual injunction in a proceeding brought by the United States under § 4, c. 647, of the Act of July 2, 1890, 26 Stat. 209, "An Act to protect trade and commerce against unlawful restraints and monopolies", against Cement Manufacturers Protective Association (an unincorporated organization), four individuals (the officers thereof); and nineteen corporations engaged in manufacturing Portland cement in Pennsylvania, New Jersey, New York, Maryland and Virginia, the members of the Association.

The petition alleged restraint of trade in violation of § 1 of the Act, "entered into and carried out through the instrumentalities of organizations known as associa-

tions" (*R., p. 4*), which were charged with "the exchange between members of comprehensive statistical data which enables each to know what his competitors are doing and to conduct his business accordingly" (*R., p. 5*); and prayed that the Cement Manufacturers Protective Association might be adjudged a violation of §1 of the Act and enjoined accordingly (*R., p. 19*).

The defendants filed their joint and several answer explaining all the matters mentioned in the petition and correcting its allegations generally and in full detail (*R., p. 20, et seq.*).

By stipulation (*R., p. 144*), the case was heard, February 13-16, 1923, upon the record made at the trial of a criminal action against these corporate defendants and forty-four individuals, officers of the corporations (United States of America *vs.* The Atlas Portland Cement Company, *et al.*) in the United States District Court for the Southern District of New York, before Judge Knox and a jury, April 4 to May 26, 1922.

That trial had resulted in a disagreement of the jury. The Government's motion to advance says that the decision herein will largely control the further action by the Government in that criminal case and in like cases pending against a large number of cement manufacturing corporations and individuals in the Northern District of Illinois.

After final hearing on the record of the criminal trial, Judge Knox handed down an opinion on October 23, 1923, concluding that the Government was entitled to "the decree for which it asks" (*R., pp. 1798-1809*), and entered the decree (*R., pp. 1809-13*), thereafter modified in one particular (*R., p. 1813*), from which this appeal has been taken (*R., p. 1814*).

Nature of Questions Presented.

The Government's motion to advance says that the "decision by this Court upon this appeal is of public importance—

(1) Because this case involves to a greater extent than any case thus far submitted to this Court the legality of the collection, compilation, and dissemination of comprehensive statistical data through the instrumentality of a so-called reciprocal trade association.

(2) Because hundreds of corporations engaged in other lines of industry belong to Associations which have been and are collecting, compiling, and disseminating statistical data similar to those prohibited by the final decree in this case."

The case differs from "any case thus far submitted to this Court", not in the greater comprehensiveness of the statistical data or information here made available, but in its narrow limits, purposes and results.

The defendants here, in good faith and since 1916, before the legality of association activities was legally questioned, have sought and brought together for protective purposes distinct from possible restraint, only certain limited facts concerning (*1*) credits, (*2*) a particular class of closed contracts for future delivery (disclosing nothing whatever concerning 70 per cent of their sales), (*3*) certain statistics limited to the existing supply, and (*4*) the freight rates necessarily in daily use.

They have done this on the straightforward agreement that each is free to conduct his business exactly as

he pleases. There is no showing whatever of any ulterior understanding to the contrary.

The record discloses none of those injurious consequences or incriminating incidents which have brought the activities of other associations into condemnation, and contains full proof of undiminished and acute competition in the trade throughout the life of the defendant organization.

The Decree.

The decree (*R., p. 1809-1813*) in general substance:—

(*i*) Enjoins the continuance of Cement Manufacturers Protective Association or any part thereof and forbids any similar organization (*R., p. 1809, Pars. 1, 2, 3*).

(*ii*) Enjoins the defendants from collecting or distributing information concerning closed "specific job contracts", either the particular information theretofore exchanged or any "information with reference to such contracts" (*R., p. 1809, Par. 4, Par. 5, last clause*).

(*iii*) Enjoins the defendants with respect to statistical information, forever forbidding them from making or receiving, through any collective agency, any report of either available supply or shipment (*R., p. 1811, Par. 6*). This provision was relaxed by subsequent order to the extent of permitting reports of shipments for assessment of expenses of the national Portland Cement Association, provided the shipments are reported "at the close of the calendar year * * * and for no other purpose" (*R., p. 1813*).

(*iv*) Enjoins the defendants forever from "agreeing" or "hereafter agreeing" concerning many things, chiefly established practices and customs prevailing in the industry (*R., p. 1811-12, Pars. 7, 8, 9, 10, 11*). For brevity, these items are not here particularized. They will be dealt with together when we come to point out that it was

not shown that any agreement concerning any of them existed or was contemplated.

The exact nature of the decree, trade expressions used therein, and the questions here presented, may be best explained by defining the activities of Cement Manufacturers Protective Association, leaving disputed matters for later consideration:—

The Activities of Cement Manufacturers Protective Association

The Association was formally organized in January, 1916, following some similar unorganized efforts of the manufacturers, during the three months preceding, to protect themselves along the lines of the "specific job contract" activities (*Ex. No. 530, R., pp. 715-6; Ex. 532, R., pp. 717-8*). The constitution then adopted, within which it thereafter acted, stated the objects as follows:—

> "The objects of the Association are the collection and dissemination of such accurate information as may serve to protect each manufacturer against misrepresentation, deception and imposition, and enable him to conduct his business exactly as he pleases in every respect and particular, free from misdirection by false or insufficient information concerning the matters following, to wit,—
>
> (a) Information concerning credits.
>
> (b) Information concerning contracts which have been made for the delivery of cement, sufficiently complete to enable the manufacturer to protect himself against spurious contracts and like transactions induced by misrepresentation.
>
> (c) Information concerning freight rates on cement.
>
> (d) Statistical information as to production, stocks of cement and clinker on hand, and shipments" (*Ex. 13, R., p. 353*).

The constitution further provided that—

> "Membership in the Association shall be recognized as implying that the member is absolutely

free to conduct his business exactly as he pleases in every respect and particular" (*R., p. 357*).

Pursuant to a provision of the constitution (*R., p. 357*), a public stenographer (*R., p. 153*) reported all meetings in "minutes which contained literally every word that anyone said at the meetings taken down verbatim whether important or trivial or what not" and the minutes of all the meetings were sent to the Federal Trade Commission (*R., p. 162*). The meetings were also attended by counsel, to whom were referred all questions concerning whether any proposed discussion or action was within the limits of the constitution and legal propriety (*R., pp. 401, 407, 429-30, 457-8, 462, 476, 567, 568, 570, 576-7, 580, 622-5*).

The information (within definite limits hereinafter defined) was sent to the Association's office and out from it by means of printed forms because that economized work and obviated comment.*

The Association was "in substance simply a mechanical multiplying and tabulating machine" (*R., p. 162*). It merely put together and sent out the information without comment, conclusion or suggestion (*R., p. 162*).

The officials of the Association were a president, who presided at meetings, and a treasurer, who had custody of the funds, each connected with a corporate defendant

* The opinion below speaks of "an elaborate system of about forty forms" (*R., p. 1800*). In fact, there were all told thirty-one forms, six connected with the information concerning credits, fourteen with that concerning specific job contracts, nine with statistics and two with a bag report (*R., p. 130 et seq., p. 163, p. 166*). But the number of forms does not indicate the subject matter and was occasioned by providing one for each stage of each detail of the business from members to the Association, the Association to its employees, the employees to the Association and the Association to members.

and serving without compensation; a secretary, (Miss Phalen, named as defendant), who had charge of the reporting (*R., p. 129, p. 153*), and a vice-president (Major Hulsart, named as defendant), an engineer, whose duties related particularly to the technical work connected with the investigation of the amount of cement which would be required to complete "specific job contracts" (*R., p. 350*)—paid employees without experience or qualifications enabling them to direct or shape policies for the industry and merely performing ministerially the duties assigned them by the Association. Unlike other associations which have been before the Court, there was here no one who in any degree ever expressed the collective will or served as a "common guide" (*American Column Co.* v. *United States, 257 U. S. 377, 410*).

The kinds of information mentioned in the constitution, represented distinct and separate services. The activities did not, and could not, interact to produce a common result. Two of the defendants, the Glens Falls and Security Companies, did not have anything to do with the contract service (*R., p. 162*). One cement manufacturer in the territory, not defendant, the Helderberg Company, has received the credit service. The freight rate books "went broadcast almost" and to companies, such as the Tidewater Company, not connected with the Association (*R., p. 162*). Some of the four activities were —perhaps each was—too unimportant to be conducted alone, because not worth the expense of maintaining the necessary machinery. But except in sharing the expense, each activity was a distinct and separate service.

The extent and limits of these activities, respectively, were:—

(a) The Activity Concerning Credits.

The information concerning credits was limited to a monthly alphabetical list of accounts two months or more over due, consisting of the name and address of the delinquent debtor, the amount of the over-due account and ledger balance, bills receivable, accounts in the hands of attorney for collection, and any explanation, as that the account is treated by the debtor as offset by a balance due for bags, or disputed, or the like (*R., pp. 159-60, Ex. Nos. 59, 60, 61, R., pp. 367, 368*); a comparison of the general totals with those for the past twelve months (*Ex. No. 62, R., p. 369*); an immediate notification of payment of an account placed in the hands of an attorney (*Ex. No. 63, R., p. 370*); and a form, "very little used", for answering inquiries as to whether a particular name had appeared in the monthly report, and, if so, where (*R., pp. 160-1, Ex. No. 64, R., p. 370*).

This is merely what is called "protective" as distinguished from "informative" credit reporting (*R., p. 575*). There was never any comment concerning any name on the list. No agreement or understanding as to whether the delinquents should be extended more credit or the like, is either pleaded or suggested.

The activity concerning credits may be enjoined by the general injunction against the Association and all its parts (*R., p. 1809, par. 3*). It is not touched by the specific definition of proper and improper credit activities attempted in the decree (*R., p. 1811, par. 8*)—not by the attempted definition of proper activities because information only "upon specific requests" would be too slow for practical use in this highly competitive business; and not by the attempted definition of impropriety because

no agreement to refuse sales or credit to delinquents was ever made or contemplated.

(b) The Activity Concerning Contracts.

The activity concerning contracts or sales was limited as follows:

(1.) The Association did not collect or distribute any information whatsoever concerning the sale of 70 per cent. or more of the cement sold by its members. Nothing was disclosed concerning any sale except those made under a particular kind of contract for future delivery, always customary in this industry, known as a "specific job contract" (*R., p. 162*).

The "Specific Job Contract" Mentioned in the Decree.

Specific job contracts have been commonly used in this industry since long before any collective activity (*infra, p. 73*).

Cement is used in large works long in construction. Those about to undertake them want an extraordinary supply of cement only for that particular work and to be sure of its cost. Manufacturers contract to supply the cement for a named price, although the costs of making cement and market conditions at the time of delivery cannot be known at the time the contract is made. Neither party wants to contract for the future delivery of that supply of cement except for that specific purpose and the common contract provides accordingly.

In the words of the opinion below, "these are agreements whereby a manufacturer is to deliver in the future cement to be used in a specific work, such as a particular building or road, and the obligation is that the manu-

facturer shall furnish, and the contractor shall take, only such cement as is required for or used for the specific purpose" (*R., p. 1801*), called the "specific job".

Such specific job contracts in this industry have been in effect free options customarily made and treated on the understanding that the purchaser (*i*) pays nothing except after the delivery of the cement to him, (*ii*) need not take the cement, and, as an inevitable corollary, (*iii*) is not held to the price named in the contract, but, if the market goes down, gets the benefit of the reduced price, whereas the manufacturer, if the market price advances, is held to the contract price (*infra, pp. 72-3*).

The "Duplicate Contracts" Mentioned in the Decree.

Many specific job contracts, purporting to call for millions of barrels of cement in the aggregate (*R., p. 165*), are what are known in the industry as "duplications", that is contracts which cannot be performed because they are to supply the same cement requirements of the same specific job being supplied under another contract (*R., pp. 163-4*).

Duplications result from (*a*) contractors (or much more often dealers hoping to supply them) about to bid for the construction work, making specific job contracts with cement manufacturers to cover themselves at the time of putting in their bids and only one of them getting the construction contract, with the result that other cement contracts are left as duplications, or (b) by the purchaser entering into specific job contracts with several manufacturers for the same cement, without any manufacturer knowing of the duplicate contracts with the others, as, for instance, the Government witness Nawn

contracting with the Atlas Company for 150,000 barrels to be used in building a certain dam and never ordering out a barrel because he was "being supplied all right" without calling on the Atlas (*R., p. 218*).

Many specific job contracts are not performable and call for no cement because the projected work is given up after the contract is made (*R., pp. 164-5*).

Practically all specific job contracts largely overestimate the amount of cement that will be required to complete the job, and so on their face seem to call for much more cement than they cover, because the purchasers always "play it safe and estimate high" (*R., p. 231*). This surplus not covered by the contract, amounting in the aggregate to several millions of barrels a year (*R., pp. 165-6*) is known in the industry as "padding".

The "Diversion" or "Misuse" of Cement Mentioned in the Decree.

As a result of this common "duplication" and "padding" of specific job contracts, the manufacturer did not in fact know, and could not alone learn in advance, his own obligations for future delivery of cement or the extent thereof (*R., p. 333*).

As a result of that ignorance, any unscrupulous dealer was enabled, if and when market prices had advanced, to obtain shipments of cement at the past lower prices of any specific job contract he happened to have, by sending orders falsely representing that the cement was required for use in a specific job and so covered by a specific job contract, and then resell it at a profit. Such transactions were commonly known in the industry as "diversion" or "misuse", because the cement was obtained from the

manufacturer at the price only by the false representation that it was to be used in the specific job covered by the contract and then diverted to resale.

In one illustrative instance, one manufacturer was defrauded of $1800 by the "diversion" of only 2500 barrels of cement, accomplished by ordering out the cement under a specific job contract although the job was not to be constructed, after costs and prices had advanced seventy-five cents a barrel (*R., p. 165, D-6, R., p. 1043-5, Ex. 675, R., p. 963*). The time for delivery under such contracts commonly extends over many months, and sometimes several years (*Ex. 26, R., p. 365*). They purport to cover many millions of barrels in the aggregate, only a fraction of which will ever be called for or represents actual obligation (*R., p. 3689*).

Specific job contracts have always been the common form of selling for future delivery in this industry. But, as in most matters of customary practice, their use is usual and not rigidly exclusive; and the defendant companies at times deal with futures in various other ways not involved in this case (*R., p. 319*).

In the year 1919, 16 per cent. of the cement sold by the defendants was sold under specific job contracts; in 1920, 25 per cent; in the other years, 30 per cent.* (*R., p. 162*). The Association did not collect or distribute any information whatsoever concerning the rest of the manufacturers' sales (*R., p. 162*).

* From these figures, the opinion below draws the inference "that more and more of the commodity is annually being sold under these contracts" (*R., p. 1801*). That would emphasize the fact that the activities of the Protective Association have not tended to diminish the number of such contracts (*infra, p. 96*). But the explanation of the figures is simply the curtailment of large construction work (the field of specific job contracts) incident to the war and the gradual recovery to normal conditions.

(2) The information concerning specific job contracts was limited to such contracts as had been closed (*R., p. 163*). The facts reached the Association's office an average of eight and one-half days after the closing of the contract and were mailed out therefrom the following day (*R., p. 351, p. 163*).

(3) The contracts themselves were not sent in or opened for examination. There was no disclosure whatever of any information concerning terms or conditions, or any special arrangements or agreements between the parties to the contract, or charges or credits for bags, or discounts, or rebates, or concerning anything else except certain facts sent in by the manufacturer and learned by sending engineers to the construction work or "specific job", as follows:—

The Facts Concerning Specific Job Contracts Reported by the Manufacturer.

The facts, sent by the manufacturer on two cards, were these:—

(*i*) One card gave the contract number, the date, the name and address of the purchaser, a description of the job so complete that it could be identified, the name of the contractor, the number of barrels named, the price, the delivery point, and the date when the contract expired (*R., p. 163, Ex. No. 14, R., p. 360*).

(*ii*) Another card was sent in by the manufacturer showing any changes in those same facts, as that a particular contract had been completed, cancelled, decreased or increased in amount or extended—information incident to the other, because it might get rid of a duplica-

tion, head off an investigation and change statistics of commitment (*R., p. 163, Ex. No. 15., R., p. 360*).

The Association listed these statements received each day and sent them to the members without comment. Once a month or once in three months a printed list was made up showing the same facts from the specific job contracts then in effect, for more convenient reference (*Ex. No. 16, 26, R., p. 360, side folio p. 654, 665*).

This reporting of these facts concerning specific job contracts enabled a manufacturer to know, or suspect, which of his own contracts were duplications and which were obligations (*R., p. 333*). But in some cases it merely informed him that one or more contracts existed for the same job, without determining under which the cement would be required by the builder, and it did not inform him as to how much of his apparent obligations for future delivery consisted of "padding" which would not be required (*R., p. 163*).

The Association's Investigation of Cement Requirements of the Specific Job—the "Checkers or Inspectors" Mentioned in the Decree.

In the Fall of 1917 (after previously employing a well-known commercial agency to do the work (*R., p. 519*), the Association took up investigating "specific jobs", to determine how much and what cement would be required by the builder, as follows:—

Any member might send to the Association a request that it investigate a particular specific job (*Ex. No. 18, R., p. 361*). The Association employed trained engineers, who upon such requests (or when enough relating to a particular locality had collected) visited the places where

the works were in course of construction, or to be constructed, and ascertained whose cement the builder would use in each work and how much cement would be required. This information, and no other information whatever, was then transmitted to only the member or members whose cement was involved (*R., pp. 163-166*).

These engineers (who because they checked the amount of cement which would be needed to complete the work with the estimate in the contract, were sometimes called "checkers") investigated and reported only the facts out in the field relating to the cement used and to be used in the specific work. They had nothing to do with any investigation whatever of any papers or books, or acts of the manufacturer, or anything else (*R., pp. 164-5*).

The instructions under which they acted were in the form of a booklet (*D-4, R., p. 1037-8*). The information to be obtained was indicated by questions on the printed form given the auditor or "checker"—whether the contract for the construction work had been awarded to the contractor, whether the work had been started, how much cement the contractor said he would use, the auditor's estimate, etc. (*R., p. 1032, 1036*).

On these facts being transmitted to the members whose brands were involved, the activity of the Association was at an end. It did not send them to the other members. It did not advise or decide anything. It simply sent the facts, so far as they could be ascertained, to the manufacturer who could not judge the extent of his own obligations without those facts (*R., pp. 166-7, p. 333*).

From the facts concerning specific job contracts sent in by the manufacturers, the office of the Association made up statistics of commitments or amounts under

contract, the place of which is indicated in connection with the statistical activity (*infra, p. 20*). It similarly made some statistics of merely passing interest, such as how much of the cement covered by specific job contracts was for each kind of construction work, such as bridges, roads, dams and water power, etc., but these tabulations added nothing to the information in the report of the contracts sent the members (*R., p. 166*).

The decree restrains the defendants from having any of the particular information just described (*R., p. 1809-10, par. 4*), and also any information with reference to such contracts (*R., p. 1810-11, par. 5, last clause*). The prohibition against agreeing to cancel duplicate contracts (*R., p. 1810, par. 5, last clause*) does not apply to this activity, because there was never agreement as to what action any member should take on the information. Even the opinion below finds that there was no such agreement as is enjoined (*R., pp. 1805-6, infra, pp. 96-7*).

(c) The Activity concerning Freight Rates.

The activity concerning freight rates consisted of printing and distributing books showing in the most convenient form the freight rates—compiled from the voluminous complicated official tariffs and translated from the rate per ton of the tariffs into the rate per barrel of 380 pounds, the cement unit—to practically all points of delivery in the northeastern section of the United States, from every point where cement is produced, used by anyone as a basing point (*R., p. 166*).

Similar lists of freight rates, substantially or exactly the same in form and contents as these books, have been

prepared and used by the individual manufacturers as a practical necessity in this particular business since before any collective activity (*infra, pp. 63-4*). The publication of the Association simply took the place of previous separate publication by individual manufacturers—with great saving of money and increased accuracy resulting from more thorough and continuous checking of the rates, but no other change.

The points of large production or basing points included in the books, were not selected by the Association. They were the same as those appearing in the prior books published by individuals—all the points ever used by anyone as basing points. They were all points of actual shipment and all the points of actual shipment of economic importance—the points from which upwards of ninety per cent. of the cement is actually shipped (*infra, pp. 64-71*).

This activity may be enjoined under the general injunction against the Association and its parts (*R., p. 1809, par. 3*), but it is, we understand, affirmatively approved and not prohibited by the definitions of the decree relating specifically to freight rates (*R., p. 1811, par. 7*), because there is here no "arbitrarily established basing point" and "all rates furnished" are "the actual rates between actual points of shipment and delivery" (*R., p. 1811, par. 7*).

(d) The Statistical Activity.

The statistical activity was characterized by two limitations:

(*i*) The information was limited to the existing supplies of cement, and

(*ii*) There was a complete absence of any interpretation of, or comment of any kind on, the facts and figures in any report, meeting or otherwise.

The statistical information came from two sources:—

(*i*) Each member sent to the Association monthly a statement of its production of clinker (*i. e.* cement just before the final grinding to powder) and ground cement, shipments and stock on hand for the past month, since the first of the year and for the corresponding periods of the previous year. These were compiled and distributed to the members without any change or comment (*R., p. 166, Ex. 30-56, R., p. 366, et seq.*). In addition to the monthly statements, semi-monthly statements of shipments alone were received and distributed (*Ex. 57, 58, R., p. 367*).

(*ii*) From the specific job contract reports were compiled statements sent to the members, keeping them informed as to the amount of cement under specific job contracts (*Ex. 405-428, R., p. 706*).

Each member of the Association was thus given full information as to the supply of cement in sight and where it was, by the figures of production, shipment, stock on hand and commitments under specific job contracts.

There was never any comment on the figures, or the market or the like. There was no statistics, estimate, prophecy or mention of actual or prospective demand (*R., p. 166*). There was nothing which could indicate the collective will as to a future course (*R., p. 162*).

The decree forbids the defendants from ever collecting and disseminating through any collective agency

any report of only production, shipment and stock or shipment alone (*R., p. 1811, p. 6*). This is presumably the principal question of public interest. Whatever its legal aspects, it seems unmistakably plain that if this decree represents the law, American industry is condemned to complete ignorance of facts essential to efficiency except as some of the necessary knowledge may be collected by, and released from the custody of, some development of bureaucracy.

The Report Concerning Bags.

The only additional activity of the Association was in bringing together certain limited information concerning returned bags (which are the usual containers and constitute an instrument of delivery taken back at the price paid) decided upon some time after the organization of the Association. This was limited to sending quarterly two items (*i*) the total number of bags returned to each member during the preceding quarter and (*ii*) the percentage thereof found unfit for use (*Gov. Ex. 65-6, R., p. 371*). The report showed that the losses always varied from about three-fourths of one per cent. by one manufacturer to about four and one-half per cent. by some other, and the diversity continued throughout.

Once in 1918 a questionnaire was sent out inquiring as to the practice of each company, to determine whether better results were obtained by cleaning before or after counting, which showed that some companies counted before cleaning, some counted after cleaning and some both before and after (*Ex. 206, R., p. 640*).

There was no information concerning the charge and allowance, or deposit, for bags; or concerning the num-

ber returned by any particular customer or portion thereof found unfit for re-use (*R., p. 166*).

Meetings.

The organization of the Association avoided any Board of Directors or Trustees and provided for the conduct of business along the lines of a town meeting.

The meetings were not in general attended by the officers of the companies, who determine prices, production and policies, but by their credit men and sales managers (*R., p. 162*). The number of companies represented at the meetings varied from eleven to seventeen, with an average attendance of about two-thirds.

Monthly meetings were contemplated, but after the forms had been developed, meetings were from time to time omitted. During the only time of rising markets since the relinquishment of Government war control, the busy spring and summer of 1920, no meetings at all were held in June, July and August, with very short meetings in May and September (*R., pp. 605, 608*). The later minutes contain many complaints that it is impossible to get attendance and suggestions which were rejected of activities designed to make the meetings more interesting and attractive (*R., pp. 547, 549, 620*).

The meetings (reflected in the record by an inevitable concentration of only the fragments most susceptible of misinterpretation) were devoted to transacting the business of the Association, the number and salaries of employees, the publication of the reports, the rental of offices, purchasing equipment, financing the Association, considering and rejecting proposed changes in, or additions to, the activities, and the like.

The minutes show that there was nothing constrained or artificial in the conduct of the meetings, and those present were proceeding in good faith to carry on the activities of the Association within the limits of the constitution and by-laws.

There were from time to time individuals who expressed themselves at greater or less length concerning the general aspects of unimportant matters (never as to production or prices or market conditions or the like), on which there was either no action or action of the meeting against the suggestions.

There was never any mention of the figures in the statistical reports. There was no comment whatever on past conditions or on prospects as to market, production, prices, or anything of the kind. In brief, the meetings developed nothing which could supply to the manufacturer any substitute for his own independent will and judgment concerning production or prices or anything which affects the public.

The Absence of the Evidences and Instruments of Restraint Found in Other Associations.

The character of the Association is made plainer by comparing it with other Associations coming before this Court long after these defendants had determined the limits of their activities.

There was a complete absence of any of those activities of other Associations that have been examined by this Court, upon which the Court has based its findings of violations of the statute:—

(1.) There was here no disclosure of what the Court referred to in the Hardwood case as "the minutest de-

tails of their business" (*257 U. S. 410*), and in the Linseed Oil case "all the intimate details of their affairs" (*262 U. S. 389*)—in the Hardwood case, a report of all sales with "all special agreements of every kind, verbal or written, with respect thereto" (*257 U. S. 394-5*), and in the Linseed Oil case "full, accurate, complete and certified reports of all sales, quotations and offerings" (*262 U. S. 381*). In those cases every detail of each transaction with each purchaser was fully disclosed.

In the case at bar, there was no disclosure of anything whatever concerning upwards of seventy per cent. of the manufacturer's sales; and in connection with the remaining fraction, sales by specific job contracts, there was no disclosure of the whole transaction or any special agreements, terms, conditions, discounts, commissions, rebates, etc., but merely certain facts serving definite protective purposes.

Any defendant could sell any amount of cement at any price, with any charge or allowance for bags, any discounts, any commissions, rebates, special arrangements with the purchaser, etc.,—all without any disclosure whatever. He could sell for future delivery without expecting to report except when the sale was under a specific job contract, and even the reporting of the facts concerning such contracts, could be readily omitted without possibility of detection through the Association (*R., p. 338*).

(**2.**) There was here nothing in the nature of any audit or investigation of a manufacturer's books or business. In the earlier cases the members of the Association submitted their books and papers to investigation by auditors (*257 U. S. 410; 262 U. S. 381*).

That, especially when coupled with the complete disclosure of every detail of each transaction, seems an earmark of any agreement where the sanction is "the restraint of exposure of what would be deemed bad faith" (*257 U. S. 410*). Its absence seems to reduce any price agreement to a silly method of inviting some among one's competitors to cut prices without fear of breaking the market.

(3.) There was here no information concerning any outstanding quotation or price. In the Hardwood case, all prices were reported "as soon as made", and the Court distinguished them from "past transactions" (*257 U. S. 398*). The declared object was, "by making prices known to each other they will gradually tend toward a standard in harmony with market conditions" (*257 U. S. 393*). In the Linseed Oil case, this was carried to the extent of an agreement not to change outstanding prices without telegraphing to the Bureau (*262 U. S. 386*). Particularly when accompanied by collective discussions, such outstanding prices may embody ideas very different from those upon which these defendants have proceeded (*R., p. 354, (2) p. 354, infra, p. 58, pp. 93-94*).

(4.) There was here no disclosure of even past prices of seventy per cent. of the business (*R., p. 166*).

(5.) There was here no disclosure of any charge or allowance, or deposit, for bags (*R., p. 163*).

(6.) There was here no disclosure of any following of, or departure from the customary trade practices, except in so far as the reporting of facts from specific job contracts would indicate that people were making that

kind of contracts, as had always been customary (*R., pp. 153-167*).

(**7.**) There was here no reporting of discount (*R., p. 163*).

(**8.**) There was here no reporting of any cost figure.

(**9.**) Perhaps most important, there was here no attempt to formulate, and nothing whatever which could possibly indicate or suggest, the collective will concerning price or production or anything affecting the public interest:—

> (*i*) There was no comment, in any report or meeting, on past business;
>
> (*ii*) There was no mention, in any report or meeting, of market conditions or prospects or anything of the kind; and
>
> (*iii*) There was no mention, suggestion or indication, in any report or meeting, of future production, sales or prices or of any estimate or standard therefor, or of desirable behavior with respect thereto, to which the individual manufacturer could, either specifically or generally, conform his acts.

The defendants here did not desire, or provide for, any formulation or expression of the collective will concerning price or production or other matter which might interfere with one taking advantage of his opportunities and judgment to make his own investment more secure and profitable at the expense of his rivals; and any collective standard for their conduct in such matters was as completely foreign to their thoughts, words and acts as a collective standard for their religions or politics (*infra, pp. 120-126, 127, 128*).

In the other cases before this Court, the collective will was constantly expressed through the representative or agency of all, employed largely for that purpose. In the Hardwood case, it was said "all the activities of the plan plainly culminated in the counsels contained in these letters and reports" of the "common guide" (*257 U. S. 399*). In the Linseed Oil case, "the bureau displayed great industry in making inquiries, collecting information, investigating the smallest derelictions and giving immediate advice to subscribers" (*262 U. S. 387*).

The work of the Association here was purely mechanical. It never in any way commented or advised, or counseled, or estimated, or did anything else except get, and send out, the bare information within the narrow limits prescribed.

The Opinion Below.

The opinion below recites the acts performed by or through Cement Manufacturers Protective Association and the absence of any agreement, general or specific, except to engage in those limited activities.

But the opinion contains many statements indicating misunderstanding of the business aspects, the scope of the collective activities, and practical effects, and a number of controlling mistakes of fact, upon which the conclusion was rested. For clearness and brevity, most of these mistakes are corrected in connection with the discussion of the facts *(infra, pp. 49, 58, 98, 111, 113, 115)*. But for certainty of definition of the activities enjoined, we respectfully mention two points here:—

(1.) The Court below was largely influenced by the general uniformity in matters of customary trade practices. Finding that they existed as now prior to the formation of the Association (*R., p. 1800*), the opinion reasons that after a cut-throat trade war (throughout which they were the same), "the time was ripe" for an association to keep them as they were; that uniformity in them must affect prices because in some patent licenses of 1909 and 1910, fixing a minimum price on cement made under the patent, there were provisions against cutting that price by means of these practices; that disclosure tends to promote uniformity; that there was some evidence that some of the defendants desired the refusal of credit for worthless bags and of unearned discount for cash, to be uniform. But all this reasoning, with respect,

confuses general, abstract desires of any responsible manufacturer with the purposes sought or attainable through the Association, and loses sight of two controlling facts:—

(*i*) These practices and such uniformity as they exhibited were the natural, inevitable products of the economic factors and the same before the patent licenses or any collective activity whatever as well as through cut-throat trade war (*infra, pp. 42-76*); and

(*ii*) These practices, or departures therefrom, were not disclosed through the Association *(supra, pp. 10-22, 25-6)*. So far as these practices were concerned, the competition was precisely the same as if the Association had not existed.

(2.) The Court concluded that while competition had not been entirely suppressed, "manufacturers by reason of the exchange of statistics were equipped to regulate their production and by common consent and a concert of action did so, to the end that the cement supply would at all times be a lap or two behind the demand, and thus created higher prices" (*R., p. 1808*).

The errors of fact are explained later *(infra, pp. 120-126)*. To define the activities which were here obviously misunderstood:—

(*i*) The Association never in any way devoted a word or thought to any estimate of demand or production; and

(*ii*) The production statistics invariably showed merely that some manufacturer was producing very much more, some other very much less and the others various degrees in between the extremes *(infra, pp. 120-2)*,

without any other possible indication whatsoever of what a manufacturer should do. Obviously, no one could take that as a guide—produce both more and less at the same time.

Thus the manufacturer had no course but to exercise his independent judgment and selfish will; and he did so, diversely, with the result that instead of production being behind demand, the defendants as a whole, at the end of each season were left with several million barrels of this perishable commodity on their hands (*infra, pp. 125-6*).

The Assignment of Errors and Questions Presented.

The errors assigned (*R., p. 1815-6*), all of which are relied on, go to every part of the decree and group themselves to present four chief questions as follows:—

1. Whether Cement Manufacturers Protective Association is a "contract, combination * * * or conspiracy in restraint of trade or commerce among the several States" in violation of § 1 of the Act of July 2, 1890.

> The first two assignments go to the first three paragraphs of the decree (*R., p. 1809*), adjudging the Association unlawful, dissolving it and enjoining the defendants from continuing the Association, or any part thereof, or any similar organization.

2. Whether it is unlawful for the defendants to exchange information with reference to closed contracts for future delivery of cement for specific construction work (known as specific job contracts) in order to ascertain whether they overestimate the actual requirements of the work or are duplicates held by other manufacturers for the cement for the same work.

> The third assignment goes to paragraph 4 of the decree enjoining the particular information concerning these contracts heretofore exchanged (*R., p. 1809-10*).
>
> The fourth assignment goes to the last clause of the fifth paragraph of the decree, enjoining the exchange of any "information with reference to such contracts" (*R., pp. 1810-11*).

3. Whether the collection and dissemination through a collective agency of information concerning either production, shipments and stocks, or shipments alone, is unlawful.

> The fifth assignment of error goes to paragraph 6 of the decree, which prohibits the defendants forever from collecting even these statistics through any collective agency (*R., p. 1811*).

4. Whether the Court should amplify the general prohibition of the statute into details which it considers suitable to a particular industry, when the acts thus forbidden have not been done or contemplated.

> The remaining assignments go to the first part of paragraph 5 and paragraphs 7, 8, 9, 10 and 11 of the decree (*R., p. 1810-12*). While these present many other questions of fact and law, they group themselves under this question. The most important, for instance, the prohibition as to all the trade practices in paragraph 9 of the decree, is only against "hereafter agreeing". It does not prohibit any past agreement or action pursuant thereto, but only future agreement. It seems to represent legislation—elaborating and making specific the general prohibition of the statute, after the manner of the Clayton Law—rather than adjudication.

BRIEF OF ARGUMENT.

I.

The Cement Manufacturers Protective Association is not a "contract, combination * * * or conspiracy in restraint of trade or commerce among the several States" in violation of §1 of the Act of July 2, 1890:—

1. Cooperation among those engaged in a particular industry or calling is a common law right not prohibited but impliedly endorsed by the statute, except when "in restraint of trade or commerce among the several States or with foreign nations".

Attorney General of Australia v. *Adelaide S. S. Co., (1913) A. C. 781;*
Anderson v. *United States, 171 U. S. 604, 616-7;*
Gompers v. *Bucks Stove and Range Co., 221 U. S. 418, 439.*

2. To determine the legality of the cooperation here, requires a consideration of the particular facts.

Board of Trade of Chicago v. *United States, 246 U. S. 231, 238;*
United States v. *American Oil Co., 262 U. S. 371, 390;*
Window Glass Manufacturers v. *United States, 263 U. S. 405, 411.*

3. That the cooperation here was not "in restraint of trade or commerce among the several States", is established by the facts that (*i*) the Association was organized for purposes of affording information enabling the manufacturer to protect himself against legal and economic

wrong, distinct from, and without, restraint (*infra, pp. 90-95*), (*ii*) the activities of the Association comprised nothing capable of suppressing, or even regulating, competition (*infra, pp. 95-113*), and (*iii*) its activities in fact produced no restraint but were accompanied by exceptionally sharp and strenuous competition throughout (*infra, pp. 118-133*).

4. The cooperation here included none of the elements which in other cases the Court has found to be evidence or instruments of restraint of trade.

> *American Column & Lumber Co.* v. *United States, 257 U. S. 377;*
> *United States* v. *American Oil Co., 262 U. S. 371;*
> *Supra, pp. 23-27.*

5. The activities of the Association here enjoined did not provide, separately or collectively, any substitute for the independent selfish will and judgment of the individual manufacturer as to price, production or other matter capable of suppressing competition. They provided him with a limited part of the material for more intelligent judgment and efficiency, but left his individual judgment and future conduct to be exercised in his own selfish interest, without either collective direction or check.

6. The proof is explicit that the activities of the Association did not result in higher prices, curtailed production, excessive profits, inferior service or in any tendency toward monopoly; there was, in short, no result in restraint of trade, nor any injury to the public, whether competitor, dealer, contractor or consumer (*Infra, pp. 118-133*).

7. The conclusion that the Association here was not in restraint of trade is further emphasized by consideration of each activity to "estimate what strength they have separately" (*Virtue* v. *The Creamery Package Co., 227 U. S. 833*):—

II.

It was not unlawful to bring together facts concerning specific job contracts enabling the manufacturer to distinguish in advance his obligations from duplications and padding:—

1. Where the "direct", "dominant", "main" purpose and result of cooperation is to enable the individual to protect himself in the enjoyment of his legal rights against dishonesty and irresponsibility, and the effect on competition, if any, is "accidental, secondary, remote or merely probable", the cooperation is not in restraint of trade.

Swift & Co. v. *United States, 196 U. S. 375, 395;*
Anderson v. *United States, 171 U. S. 604, 617;*
United States v. *Addyston Pipe & Steel Co., 85 Fed. 271, 280;*
Window Glass Manufacturers v. *United States, 263 U. S. 403;*
Virtue v. *The Creamery Package Co., 227 U. S. 8, 37;*
Reynolds v. *Plummers Protective Assn., 30 Misc., 709 (169 N. Y. 614);*
United States v. *Whiting, 212 Fed. 466, 476.*

2. The collection of information enabling the manufacturer to protect himself against misrepresentation and

fraud in matters of credit and specific job contracts for future delivery, is within the principle of the cases just cited, as well as within the rules relating to statistical activities hereinafter submitted.

III.

The collection and distribution of information concerning either production, shipments and stocks or shipments alone is not unlawful:—

1. Information alone without comment does not necessarily suppress competition (*infra, pp. 105-8*); and here in fact those receiving the information (*i*) exercised their wills and judgments variously and diversely with respect to the only subjects to which the information related, (*infra, pp. 120-6*), and (*ii*) were not restrained from competing but stimulated to increase competitive activity (*infra, p. 104*).

2. The restraint of trade declared illegal by §1 of the Act cannot exist without some substitution of some collective will for the independent will of the individual —if voluntary, some surrender of the independence of the individual to the collective will—in something (as, often, price or production) "suppressing", as distinguished from merely regulating or strengthening, competition.

Chicago Board of Trade v. *United States, 246 U. S. 231, 238;*
United States v. *American Oil Co., 262 U. S. 371, 388.*

The statute does not prescribe how the individual shall exercise his independent will. He may, for instance, independently wholly refrain from competition. The statute forbids only the surrender of his independence to the collective will.

> *United States* v. *Reading Co., 226 U. S. 324, 369;*
> *United States* v. *United States Steel Corporation, 251 U. S. 324, 369;*
> *Swift & Co.* v. *United States, 196 U. S. 375.*

Surrender of independence to the collective will cannot exist without at least one, and probably two, essentials:—

(*1*) An expression of the collective will—some formulation and indication of the collective will, so that the individual may know what it is and be offered a standard of conduct to which it is possible for him to conform his future acts. Without such an expression of the collective will the individual necessarily must act independently (*infra, p. 139*).

(*2*) The individual's agreement, express or implied, to conform his acts to the collective will so expressed; or, lacking agreement to conform, some form of compulsion—moral or otherwise—to constrain his action.

An expression of the collective will might (or might not, according to the facts) be supplied in any one of numerous ways, as

> (*a*) by the counsel or advice of the representative of all, the mouthpiece of the collective will, directing the course of all with respect to production and prices, as in the Hard-wood case, (*257 U. S. 377*), and the Linseed Oil case, (*262 U. S. 371*), or

(*b*) by some measure of future prices, as a collectively determined average cost and collectively determined average freight rate, or

(*c*) perhaps by mere collective discussion of future prospects definite enough to indicate a course to be followed.

There is here neither (*i*) any formulation or expression of the collective will indicating any standard to which the individual can possibly conform his future conduct nor (*ii*) any understanding or agreement concerning his future conduct, except that he shall carry on his business "exactly as he pleases in every respect and particular" nor (*iii*) any disclosure of details of each transaction coupled with collective audit, or other means of possible constraint.

3. Cooperation or agreement which in fact enables the individual to conduct his competition more efficiently and strongly by avoiding the weakening blunderings incident to ignorance of necessary facts, is not forbidden by the statute:—

(*a*) The statute "was intended to secure equality of opportunity" and promote individualism (*United States* v. *American Oil Co., 262 U. S. 371, 388*). Whatever strengthens, without restraining, the individual, fulfills the purpose of the statute.

Cooperation limited to making available common facts, equalizes opportunity and promotes individualism by affording the basis for intelligent independent judgment and skill as a substitute for the "contagious optimism or equally contagious pessimism" which largely govern the unin-

formed and tend, in the long run, through many economic distresses, to eliminate the individual.

(*b*) The purpose and effect of cooperation limited to making available the facts, is "reasonably forwarding personal interest and developing trade" (*United States* v. *Standard Oil Co., 221 U. S. 159-60*).

(*c*) In principle, cooperation limited to making available the facts, is like cooperation to develop improved machinery and processes through common research laboratories, strengthening each individual manufacturer and the industry as a whole, without suppressing competition. Where the "main" result is to strengthen an individual business and increase its power as a competitor and usefulness to the community, as in a partnership, even a contract in direct restraint is lawful (*United States* v. *Addyston Pipe & Steel Co., 85 Fed. 271, 280*).

IV.

The provisions of the decree enjoining agreement on methods of sale, existing trade practices and so forth, were unwarranted by any proof of the previous existence of such agreement.

1. Only acts which are agreed on, the embodiment or product of some "contract, combination * * * or conspiracy", are within the statute.

United States v. *Colgate & Co., 250 U. S. 300, 306-7;*
United States v. *Schrader's Son, Inc., 252 U. S. 85, 99.*

(**a**) The customary methods of sale, for present delivery or for future delivery generally under specific job contracts, at delivered prices figured from various points of large production used as basing points, have evolved from the circumstances without collective action and have not been affected by collective action (*infra, pp. 73, 64-71*).

(**b**) The trade practices of individuals were not disclosed through the Association. They were not agreed upon. They were in details diverse and various (*R., p. 315, et seq.; p. 1508, et seq.; infra, pp. 79-85*).

2. The matters of desirable practice infrequently mentioned in the course of meetings extending over six years—always as generalities—related only to such minor dishonesties as giving discounts when they were not earned or allowances for bags unfit for use, subjects not included in the reports (*R., p. 166*). All the matters thus mentioned—and some of those upon which the defendants are enjoined "from hereafter agreeing" (*R., pp. 1811-2*), as, for instance, the establishment of uniform charges for bags or the prohibition of the diversion of cement sold on specific job contracts (*R., p. 1812*)—might lawfully be made the subject of agreement, although they never have been, since such agreements would sharpen and promote competition by preventing its disguise and thus make it more likely to bring down prices to the public (*R., p. 305*).

Chicago Board of Trade v. *United States, 246 U. S. 231, 238;*
Swift & Co. v. *United States, 196 U. S. 375, 394*
where the injunction approved, affirmatively

permitted agreement upon certain charges for cartage and delivery, upon certain rules for the giving of credit and upon certain curtailment of shipments to prevent over-accumulation and loss in particular markets.

3. Because it was not shown that the defendants made or contemplated the agreements enjoined in paragraphs 5, 7, 8 and 9 of the decree (*R., pp. 1810-2*), there was no basis for any injunction with respect to such matters.

United States v. *Coffee Exchange, 263 U. S. 611.*

V.

The decree should be reversed and the cause dismissed.

ARGUMENT.

THE FACTS.

THE CHARACTERISTIC PHENOMENA AND METHODS OF THE CEMENT INDUSTRY.

The Portland cement industry is exceptional, perhaps unique, in the degree to which it presents certain controlling economic factors—chiefly the complete commercial identity of the product of all manufacturers and its open sale everywhere, the dominant position of the dealers, professional fully-informed purchasers, the comparative importance of the freight item in cost to the purchaser, the necessity of expensive bags as instruments of delivery, etc.

Because of these factors and the large number of independent, well-equipped competitors, competition exhibits a directness which is exceptional and results in phenomena which are unfamiliar and, in other circumstances and industries, might evidence collective control.

Many of the errors below—we think all these proceedings against these defendants—are attributable to failure to understand these factors and the inevitable economic results of them. And so particular attention to some of them seems necessary:—

I.

The Facts and Economic Factors Connected with the Well-defined Market Price—The So-called "Uniformities".

Portland cement is a completely standardized product sold openly under true market conditions to fully-informed professional buyers. Although the superficial details are not the same, economically the condition in this industry is, and has been, comparable, in one of its aspects, to adjoining booths in a market offering, within sight of each other, identical bushels of wheat to purchasers seeing all offerings. But the common price inevitably resulting in such circumstances, is here made more stable and clearly seen by (*i*) the fact that the manufacturer must make a single price for a great output *(infra, pp. 61-3)* and *(ii)* any particular sale is secondary to maintaining a supply for, and satisfying, his regular dealer customers who are his "permanent asset" (*R., p. 335*).

1. Portland Cement as a Vendible Commodity.

Portland cement is a completely standardized product defined and marketed by reference to standard specifications and tests, which prescribe the chemical limits, the specific gravity, the fineness, the soundness, the time of setting, the tensile strength, how the samples shall be tested, and the like (*D-1, R., p. 1030*).

The standardization of Portland cement has not been brought about by collective activity of the manufacturers. The charge in the Petition that this "uniformity" is the result of the "combination and conspiracy" (*R., p. 17*) has apparently been abandoned; and the evidence shows that the standard specifications, growing out of the im-

portance of having definite standards of strength and reliability in a material upon which great works and the safety of many people depend, have been formulated and given effect by users as follows:

Prior to 1912, Portland cement was defined and marketed by specifications which were substantially the same. On April 30, 1912, an executive order was issued by President Taft promulgating a standard specification, subject to revision from time to time with improvements in product, methods of testing and technical knowledge; and that specification, with such revisions, representing the result of several years' work of a joint conference representing the United States Government, the American Society of Civil Engineers and the American Society for Testing Materials, has been universally accepted as the standard by which Portland Cement is defined and marketed (*D-1, pp. 5-6, R., p. 1030, side folios pp. 1932, 1934-5).*

Portland cement of one manufacturer is commercially identical with Portland cement of any other manufacturer, and the product of one does not command a higher or lower price in the market than that of others. The commercial identity of the Portland coment of all manufacturers, by reason of the universal acceptance of the standard specifications, is so complete that a difference of "one cent a barrel in price" is generally sufficient to turn business from one manufacturer to another (*R., pp. 181, 178, 189, 148, 174*).

2. The Dealer is the Controlling Factor in the Distribution and Marketing of Cement.

The cement manufacturer must depend for the distribution of most of his product upon sales at wholesale

to dealers. About ninety per cent. of the cement manufacturer's sales are sales to dealers, the remaining ten per cent. being sales to Governments, municipalities, large industries and contractors, not passing through the dealers' hands (*R., p. 328*).

The dominant position of the dealer in the industry has naturally evolved from the facts that as a practical matter the manufacturer cannot operate without the assistance of the dealer and the dealer controls the public demand for cement. Cement is shipped from the mills where it is produced to thousands of scattered points where it is used. By reason of its weight and bulk and the fact that it is ruined by exposure, there must be at each of these delivery points someone to take the cement from railroad cars, with trucks to haul it and a warehouse to receive and protect it. It has been impracticable for the manufacturer (or anyone not selling also other articles to help carry the costs) to maintain such establishments at the thousands of different delivery points for his occasional shipments. So cement is commonly sold to dealers in building supplies, who buy in carload lots, thereby getting lower freight rates, and sell to their customers at retail.

The dealer has been commonly compensated for his services by a trade discount, or differential below the price paid by the consumer, which generally was five cents a barrel prior to 1916 and then became generally ten cents a barrel (*R., p. 320*).

The dealer's custom and good-will is the permanent asset of the manufacturer's business (*R., p. 335*), and the manufacturer's sales efforts are directed largely towards maintaining and securing the custom and good-will of dealers.

3. The Open Market Conditions Under Which Cement Is Sold.

Dealers are professional buyers at wholesale, who follow the conduct and quotations of the manufacturers closely, are constantly informed concerning offerings of different manufacturers and commonly shop around, considering the offerings of different manufacturers, before placing their orders (*R., pp. 172, 174, 177, 178, 190, etc.*). A few dealers carry the cement of only one manufacturer; most carry the cement of several manufacturers.

All the defendant corporations, in addition to sending written (or printed) quotations, employ salesmen who assiduously keep in the closest contact with the dealers in the territory they cover, soliciting orders, cultivating their good-will and closely watching and instantly reporting to their principals all trade news, including quotations, offerings and transactions of competitors (*R., pp. 147, 150, 151, 174, 178, 179, 190, 192; D-69-72, D-74-6, D-699, D-796, D-40, D-658, D-431, D-450, etc.*).

Through his dealer customers and his contact with dealers maintained by his salesmen, the manufacturer learns by telephone and telegraph of quotations and offerings of his competitors practically as soon as they are made, and often with opportunity afforded by the dealer to meet the offering if below the market (*ib., R., pp. 334, 190*).

4. The Well-defined Market Price of Cement.

As a result of the economic factors, for many years and more than ten or twenty years, there has been, and

is, a well-defined market price at which Portland cement sells at any particular place and time:—

(1.) In the case of a standardized article sold at wholesale to fully-informed professional buyers (according to the uncontradicted and well-supported evidence) uniformity of price must inevitably result from active, free and unrestrained competition, and such uniformity of price is normally more clearly seen than even the uniform, or market, price on a stock exchange, and remains over periods until disturbed by new factors (*R., pp. 294-8, 304-5, 305-6, 307*).

The uncontradicted evidence was that the observations of economists to this effect were "unanimous"; had been confirmed by studies showing uniformity of price produced by competition in the wholesale salt market, crude oil in the Kansas-Oklahoma field, corn gluten, wire nails, wooden screws, sulphur, crude brimstone, and other free industries; and that the factors of heavy investment in plant and capital and a customary right of cancellation of contract by purchasers, such as exist here, tended to emphasize the inevitable uniformity. The economists whose observations were "unanimous" included John Stewart Mill, W. Stanley Jevons, Francis Walker, F. W. Taussig of Harvard, E. R. A. Seligman of Columbia, Arthur T. Hadley of Yale, John Bates Clark, Richard T. Ely, as set forth in their writings; and also Gide's Political Economy, translated by Archibald; Bullock's Introduction to the Study of Economics; Knight on Risk, Uncertainty and Profit; Carver on Principles of National Economy; Taylor on Principles of Economics; Seager on Economics; Turner on Economics; Flux on Economic Principles; Fetter on Economic Principles.

(2.) The same degree of uniformity of price of Portland cement (and of its incidents, bag charges and allowances, and cash and trade discounts) has existed without any change since long before the formation of the Protective Association or any collective activity, and as far back as any of the witnesses could remember, some going back thirty years or more.

The statement to the contrary in the opinion below (*R., p. 1806*) is erroneous. Some of the witnesses and the period covered by the experience of each in this particular are as follows:—

Government's witness Keller, *R., pp. 172, 174, 175* (40 years);

Government's witness White, *R., p. 221* (35 years);

Government's witness Merriman, *R., p. 176* (30 years);

Government's witness Keller, *R., p. 189* (25 years);

Government's witness Kelter, *p. 190* (25 years);

Government's witness O'Connell, *p. 222* (15 years);

Government's witness Nawn, *p. 218* (since 1910);

Government's witness Elliott, *pp. 167-8, 188* (since 1912);

Government's witness Whipple, *p. 170* (since 1912);

Government's witness Lyth, *p. 191* (10 years);

Government's witness Wright, *p. 220* (since 1914);

Government's witness Oakley, *p. 222* (since 1914);

Defendants' witness Morron, *p. 335* (since 1910);

Exhibits 560 to 570, Bids December, 1912, Amsterdam Building Co., 8 companies quote market price (*R., pp. 812-821*);

Exhibit 675, Exhibit 676, Base prices back to 1913 or 1914 (*R., p. 963*).

The additional facts demonstrating that such uniformity as exists, is merely a normal market price resulting inevitably from the sharp competition, and not an agreed or controlled uniformity, are brought together later on at pages 50-58.

5. The Errors in the Opinion Below Concerning the Market Price or Uniformity.

The Court below found that there is not "any compact that cement shall not be sold below a specified price" (*R., p. 1803*), but (*i*) doubted whether such uniformity would result from free competition (*R., p. 1806*) and (*ii*) said that "since the Association began to operate there has been a uniformity and stability in such quotations [of prices] that previously did not exist" (*R., p. 1806*).

(*i.*) Whether free competition, under the particular circumstances, would result in such uniformity is matter, not of law but economics. The only evidence is that it would (*R., p. 294*). The speculation to the contrary, that prices operate on an individual cost-plus basis regardless of the market, has nothing to support it and is

contrary to "the ordinary fact in commerce that happens a million times a day" (*R., p. 306*). "In the same open market at any one moment there cannot be two prices for the same kind of article."*

(*ii.*) The statement in the opinion that the uniformity of prices has been different since the Association began to operate is directly contrary to the evidence (*supra, p. 48*). As a matter of fact, the period when the uniformity was most marked was during the cut-throat trade war when prices were below bin cost and far below commercial cost (*Ex. 675, R., p. 963*). But the evidence definitely proves that the uniformities connected with price here, are the result and evidence of exceptionally sharp competition:—

6. The Proofs that Prices are Governed only by the Intensity of the Competition.

Uniformity of price in the market may result from agreement or sharp competition (*R., p. 305*). When the uniformity is well-defined and agreement excluded by the facts, the vigor of the competition is demonstrated. That is the case here:

---

* Jevons, "The Theory of Political Economy", p. 90. "In no instance where there is a perfect competition can there be more than one price for the same thing at the same time." (Seligman "Principles of Economics", pp. 234-5). "There cannot be two prices for one commodity in the same market at the same time" (Clark "Essentials of Economic Theory", pp. 99-100). "If in an open market under full competition any portion of a given commodity is to be sold at a certain price, then will all the portions of that commodity sold at that time be sold at that price" (Walker "Political Economy", pp. 05-6). "When there is perfect competition there is (in a given market) only one resultant price for all buyers and all sellers", Fisher "Principles of Economics", p. 251. See to same effect authorities cited in the record, pp. 294-5.

(*a*) The prices of the defendant corporations did not manifest agreed-on or planned uniformity, but the kind of uniformity characteristic of a market price resulting from competition in a free market:

(*a*) The uniformity has disappeared during price movements in the market, following a reduction or advance by an individual manufacturer. Since the relinquishment of Government control, the periods of price movement during which quotations have not been uniform, have been: The reduction of 15 cents a barrel in response to the urgings of the Governmental Peek Committee, in April, 1919, 2 days; the advances of the next year, respectively, 27 days, 13 days, and 19 days; ignoring the succeeding individual advances not changing the general market, the succeeding large drop of 20 cents was completed in 7 days, and that of 30 cents in 3 days (*Ex. 675, R., p. 963*).

During the cut-throat competition (*R., pp. 332-3*), when prices were down below mill cost, complete uniformity in the two declines in February, 1915, was reestablished in 3 days and the two succeeding rises resulted in uniformity being reestablished, respectively, in 4 and 3 days (*Ex. 675*).

These periods of diverse prices during price movements are irreconcilable with price control of any kind, because they imply great diversity in profits or losses incompatible with agreement. And the comparatively slow advance (except when below cost, *R., p. 333*) and quick decline is the opposite of what would appear under agreement or control.

(*b*) Occasional individual advances not followed by others, as the advances by Edison and Bath in December,

1919, the advance by Pennsylvania in April, 1920, the Alpha advance July 26, 1920, the Bath advance August 12, 1920 (*Ex. 675, R., p. 963*).

(*c*) Individual price cutting reported to the Association in specific job contracts. "Price cutting" in this business means making an exceptional low price to get a particular piece of business without changing one's general price quoted to all.

In Ex. D-641 (*R., p. 1708*) Major Hulsart *quotes* upwards of 1100 instances of different prices in specific job contracts made at the same time and place and in effect from January 19, 1919, to June, 1921, none of which can be accounted for by dealer differential or price movement, or the like (*R., p. 351*). Some of them show four or five different prices at the same time and place (*Ex. D-641, R., p. 1708, sheets 2, 5, 7, etc.*).

The Government's witness Mr. Lewis testified, in substance, that among 928 specific job contracts which he had selected at random in the reports, he found about 5 per cent. taken at prices departing from the market price, for which he could not account (*R., p. 250*).

(*d*) Individual price cutting in the current business not reported to the Association (*R., pp. 177, 181, 183, 223; D-658, p. 1717; D-436, p. 1459; D-451, p. 1469; D-460, p. 1474; D-458, p. 1472; D-470, p. 1481; D-490, p. 1496; D-489, p. 1495; D-454, p. 1471; D-247, p. 1141; D-229, p. 1134; D-426, p. 1455; D-463, p. 1478; D-556, p. 1658; D-388, p. 1435, etc.)*

These characteristics, the disappearance of the uniformity during price movements, the occasional individual advances not followed, and the price-cutting report-

ed and known to other manufacturers but occasioning no comment or action, define the prices here as normal market prices resulting from sharp competition in the standardized article, as distinguished from agreed or controlled uniformity of price.

(b) The uniformity has appeared and disappeared as the competition has increased and relaxed.

During the cut-throat trade war, when prices were down below mill cost, the uniformity was most marked. The uniformity then was obviously due to competition. During the summer of 1920, the uniformity largely disappeared and prices were as much as a dollar a barrel apart, and the competition in the market was then relaxed by the failure of transportation facilities *(Ex. 675, R., p. 963; p. 148, etc.)*. In other words, the uniformity appears when one cause, competition, is operating and any other cause excluded, and in accordance with the degree to which that cause is operating; and moreover does not appear in accordance with the operation of any other suggested cause.

(c) The same degree of uniformity existed when there was in fact no other possible cause but the competition, before any association or collective activity *(supra, p. 48)*.

(d) There was no uniformity in the price the manufacturers received.

The price realized by each at his mill, the amount of business each did, the profits each made, all varied widely

and diversely (*infra, pp. 127-133*). The only uniformity was out in the market where the competition operated.

(e) Where there was no dealer market, there was no uniformity but diversity.

Where the factor of open market condition was absent, although the business was of the utmost importance from the manufacturer's point of view, and most likely to be subject to any control, as in supplying cement for the Panama Canal, there was no uniformity, but diversity (*R., pp. 283-4*). In other words, the so-called uniformity was found only where the economic factors which necessarily produce it were present.

(f) The uniformity here involved loss of profits through reduction of price realized on the product shipped from the points of large production.

It involved, for instance, the Lehigh Valley manufacturers, the largest group, cutting the price received by absorbing freight on every sale freightwise nearer Universal or Alsen or Hudson or Fordwick, a very considerable part of their markets, to prevent their business being taken from them by the competition from those points. The conflicting individual interests thus prevailed over any imaginable collective desires of the manufacturers as a whole (*infra, pp. 67-70*).

Most important and conclusive, the evidence proves that prices were in fact made by independent action of the individual manufacturer in competition with the others:—

7. How Prices Were in Fact Made.

In view of the failure of the Court below to understand prices in this industry, it may be desirable to refer to evidence showing concretely just how prices were in fact made and how the activities of the Association had nothing whatever to do with it.

The general considerations which govern a manufacturer in fixing his prices are summarized in the testimony of Mr. Morron (*R., p. 335*). Here, as elsewhere, "the dealer is the permanent asset"; and the controlling consideration is always to supply and satisfy one's dealers.

A decline in the market price when enough cement is offered at a less price, explains itself. A manufacturer may also be forced to advance his price to avoid being swamped with contracts to such an extent as to be unable to supply and so keep his dealers:—

A particularly clear collection of contemporaneous records resulted from the fact that Mr. Morron, the President of the Atlas Company, was away at the time of the extraordinary conditions and consequent price advance in the early Spring of 1918. On March 20th, Mr. Thompson, of the Atlas Company, heard a report that another company had advanced its price 40 cents a barrel, at Montgomery, N. Y., and after trying unsuccessfully to reach the office by telephone, on the next day telephoned and wrote the information to the Atlas Company (*D-67, R., p. 1076*). On March 21st, a salesman telephoned that a dealer in Newark had quotations from Giant and Bath advancing their prices 40 cents a barrel (*D-68, R., p. 1076*). On the same day, another salesman telephoned that other dealers say that Bath and Dexter had raised their prices 40 cents per barrel (*D-69, R., p. 1076*). Other similar tele-

phone messages arrived at the Atlas Company (*D-70, D-71, D-72, D-74, D-75, D-76, R., pp. 1077-8*). On the same day, Mr. MacFarland, of the Atlas, telegraphed to Mr. Morron, at Hot Springs, Arizona:—

> "Half dozen smaller companies prices seem to be up forty cents per barrel. No information regarding any change of others. Situation well in hand. Watching carefully. Will act if advisable" (*D-80, R., p. 1080*).

Mr. Morron telegraphed in reply:—

> "Message received. Go very slow on orders and especially contracts. Confer daily with Miner [another officer of the Atlas Company] regarding manufacturing and shipping prospects. Do not let them load us with business we cannot ship especially at prevailing prices. Keep me continually posted" (*D-81, R., p. 1080*).

On the same day, Mr. MacFarland again telegraphed to Mr. Morron:—

> "Further information from dealers indicates practically all competitors' prices increased forty cents per barrel including export. When I am positive that this information is correct do you desire me to follow?" (*D-82, R., p. 1080*).

The next day, on March 22nd, Mr. Morron replied by telegram:—

> "Message received. Yes when you get definite information from trade act promptly. We cannot afford to be overloaded with shipping and manufacturing conditions so uncertain. Fight shy of contracts. Keep me posted as to volume" (*D-83, R., p. 1081*).

On March 22nd, the Atlas Company received by telephone word that dealers had Alpha written quotations 40 cents up (*D-74, R., p. 1078*), these quotations being dated the day before (*D-77, R., p. 1078*).

On March 22nd, instructions were given to issue the Atlas quotations at the advanced price (*D-87, D-88, R., p. 1082*), and on March 23rd, Mr. MacFarland telegraphed Mr. Morron:—

> "Our prices in hands of trade this morning forty cents advance" (*D-84, R., p. 1081*).

The telegram gave the amount of business taken and said:—

> "Have been able to refuse without hurting us about two hundred thousand barrels future business. Situation in hand perfectly".

As further interpreting the importance of a manufacturer not getting loaded up with contracts for future delivery when costs are advancing, we quote from a further telegram from Mr. Morron to Mr. MacFarland, dated March 25th, 1918:—

> "Don't accept any business except daily dealers until Miner notifies you of Government decision on operation. We must have free cement to sell later. This applies both east and west" (*D-86, R., p. 1081*).

Other clear instances in the record are a change by the Security Company in February 1921 (*D-522, D-502, D-501, R., p. 1501-2*); a change by the Hercules Company in 1920 (*D-42, D-44, D-45, D-46, D-47, D-49, D-50, R., p.*

1059, D-746, R., p. 1764, Ex. 675, Ex. 676, R., p. 963, D-41, A., p. 1059); the reduction of the Dexter price at Meriden (*D-544, R. p., 1650, D-545, R., p. 1651*).

Any fair reading of the record makes it certain that the activities of the Association had no slightest connection with price making and that these defendants were most actively competing.

8. The Error in the Opinion Below concerning the Purpose of reporting the Price in Closed Specific Job Contracts.

With that illustration in mind, it is plain that the Court below erred in ignoring the evidence of the actual declared purpose of including the price in the reported facts concerning specific job contracts (*R., p. 353, infra, pp. 93-4*) and reasoning that the purpose was to allow the manufacturer to deduce therefrom prices of other concurrent sales (*R., pp. 1804-5*).

A report of any price relayed by mail from the field where the contract was closed to the manufacturer's office, thence to the Association and thence to the members, could add nothing whatever to his information concerning existing market prices (*R., pp. 334-5*). It could serve no purpose except:—

> "if a report came in, for instance, that the New York Central had placed an order with a competitor for 10,000 barrels at $1.25, and $1.25 was our price, it would naturally make me think that the reason we lost the order was because the other fellow had a better salesman. It was a question of checking up the salesmanship with me more than

> anything else. The prices would not be of any use in giving me a line on current prices. We got current prices instantaneously from dealers. We got those over the telephone. These prices through the Protective Association came in about a week afterward." (*R., p. 334*).

Thus the report of *only* these prices merely contributed to make salesmanship, and so competition, more effective.

II.

The Facts and Economic Factors Connected With Selling at Delivered Prices Computed from Basing Points.

Because cement is cheap, heavy and must be protected in transit, freight is an exceptionally important part of the cost to the purchaser, often equalling or exceeding the cost of the cement. The purchaser wants to know what he must pay to get his cement and cannot, as a practical matter, figure out the freight rate (*R., pp. 330-1*). So since before any collective activity in the industry, it has been customary to sell at delivered prices (*R., p. 330, D-538, Letter of June 3, 1901, R., p. 1648*).

That method of selling seems to be mistakenly attributed in the opinion below (*R., p. 1802*) to certain patent licenses which some held in 1909-1910 (*considered infra, pp. 86-88*). It was the method used in selling cement before that; and it is the necessary method if there is to be competition between different producing points in this industry. Accordingly, we try to make plain the essentials as they have always existed:—

1. The Two Parts of the Price of a Manufacturer's Cement in any Market.

The price at which any manufacturer's cement can be bought and sold at a particular place and time necessarily is divisible into two parts, to wit:—

(*i*) The price of the cement (and its incidents, bags and discounts) named by the manufacturer at some point of production (for instance, his own mill), as the price at which plus freight he offers cement in markets freight-

wise contiguous thereto, known as a base price or price at a basing point. This part of the price in any market is determined by the manufacturer and within his control, and cannot be fixed without his action on it.

(*ii*) The cost of transportation, or freight, from such point to the particular market. This part of the price of his cement in the market is not determined by the manufacturer or within his control, but is fixed by a purely mechanical, or ministerial, application of rates established by the railroads under the jurisdiction of the Interstate Commerce Commission.

The manufacturer can and does determine what point or points of production he will use as basing points—for illustration the freight station nearest his mill—and what his price there shall be, but he cannot control the freight therefrom to markets; and his base price is ramified into different prices in the contiguous markets automatically by the mechanical addition of the official freight rates (*R., p. 331*).

2. The Manufacturer's Base Price Must be a Single Price Covering a Particular Period.

The cement manufacturer normally makes (and is compelled by the requirements of his business and law to make) his base price at any point of production or basing point, a single price covering substantially all transactions within a particular period, as distinguished from a separate price for every offering and sale.

That price may be any amount and the period short or long, in the discretion of the manufacturer, but it

must be one price, *in general*, while it lasts. The reasons for this are:—

(*a*) It is impossible to conduct a large business by treating each sale as an isolated transaction, because the price of the product has to be made with reference to the manufacturer's financial, manufacturing and inventory positions and market conditions, actual and prospective, by the responsible head, and cannot in the nature of things be determined afresh and differently for each offer and sale throughout a large territory, many times each day (*R., pp. 335-6*). He must name his price and then shop around for customers at that price.

(*b*) Any different treatment of different dealers (in markets wherein news travels "awful fast" (*R., p. 190*) would inevitably forfeit the custom and good-will of dealers, the preservation of which is essential to the conduct of the manufacturer's business (*R., pp. 285, 330*).

(*c*) The one price policy is the only fair, sound business policy, endorsed by courts which have considered it (*Steel case, 223 Fed. 55, 91-2*) and compelled by legislation whenever it has touched prices as in regulating prices of transportation and public utility services, and, since 1914, in regulating interstate commerce, by the Clayton Law (38 Stat. 730, C. 323, §2).

As President Hadley of Yale said in his book on economics, p. 82:

> "A one-price system is a most important element in commercial honesty, is secured by intelligent competition and defeated by ignorance."

So generally and normally (except for a certain, and very considerable (*supra, p. 52*), amount of price-cutting in particular transactions) the cement manufacturer makes one base price at any basing point he uses, covering all his offerings controlled thereby, until he changes it.

3. The Mechanics and Effects of Adding Freights to a Manufacturer's Base Price.

When a base price is named by a manufacturer at any point of production, his prices in all markets freightwise near that basing point are his base price there plus the different freights therefrom to such markets. The addition to the base price of the different freights to the great number of different points where purchasers buy cement, is a mechanical operation (*R., p. 331*).

So a manufacturer's prices at any production point used as a basing point and throughout its freightwise contiguous markets, are in effect a single price determined by him, which is ramified mechanically (by adding thereto the freights to those different markets) into differing prices in such markets all bearing a fixed relation to each other through freights to the basing point.

The mechanical part of a manufacturer's prices, the freight rates from his basing point or points to delivery points in territory freightwise contiguous thereto, changes much less frequently than the part determined by the manufacturer. The official tariffs give freight rates in tons, and cement is sold by the barrel of 380 pounds. Freight tariffs are mechanically most burdensome to consult and not easily interpreted correctly by

anyone but an expert traffic man. Probably from these factors, there developed long ago a convenient instrument for the mechanical addition of freight rates to base prices:—

As a necessary mechanical incident of the two distinct parts of the price of cement, it has long been customary for the manufacturer to prepare lists of freight rates wherein official freights are translated from tons into barrels of cement, and give these to his sales offices and salesmen, so that upon receiving from time to time from the manufacturer the price named by him as his price at a basing point, the members of his selling force could mechanically add the freights and thus tell customers at the thousands of points throughout the territory, the price at which the manufacturer offered cement to them. (*R., p. 331*). Some manufacturers, Atlas, Alpha, Lehigh, Edison, and others, individually put their lists in the form of printed books having the same form and contents as the books subsequently published collectively (*R., pp. 147, 150, 338, Exs. 3-11, R., p. 353*).

4. The Points of Production Used as Basing Points.

The use of different basing points in this industry, unlike the use of a single point in some others, is the product and necessary instrument of vigorous competition. Neither the use of basing points nor the point or points so used by any manufacturer, has been brought about or affected by any collective activity.

The points of production which have been (or, for that matter, necessarily will be) used as basing points

are those points of production at which any individual manufacturer has named a base price reducing market prices in territory freightwise contiguous thereto. When that occurs, other manufacturers have to meet the prices resulting in those markets, or else not sell in those markets, reducing the prices realized by them from sales in that territory so far as necessary to meet the new prices. The mechanical part of meeting such new prices consists of naming a price at the new basing point, which mechanically ramifies itself by the addition of the freights therefrom, to the lowest prices in those particular markets (*R., pp. 331-2, infra, pp. 67-8*).

The points of production heretofore used by any manufacturer as basing points have been:—

The Lehigh Valley naturally developed as a basing point from two facts: (*i*) in this country Portland cement was first produced in the Lehigh Valley, the dominating early point of production being specifically the large mill of the Atlas Company at Northampton (*D-275, R., p. 1294*); and (*ii*) as other mills were constructed on that geological deposit, the different railroads serving the region, to get tonnage, gave the mills which located on their lines freight rates to the markets, enabling those mills to ship in competition with the then dominating mill at Northampton; and there thus developed a blanket rate of origin from all the mills in the Lehigh Valley, since endorsed and extended by the Interstate Commerce Commission, so that freight rates from all the mills in the Lehigh Valley to practically each point of delivery have long been, and continue to be, equal and uniform, and

commonly determined with reference to Northampton *(R., pp. 245-6; D-251 to D-254; R., p. 264-5)*.

For many years the Lehigh Valley was the only point of production, and all prices were then the manufacturer's base price at his mill in the Lehigh Valley, plus freight to the point of delivery (*R., pp 283, 331*).

Thereafter, when cement came to be produced at other points, the manufacturers at such points naturally at first offered and sold their cement in the markets at prices made with regard to the existing market prices based on the Lehigh Valley; and thus the Lehigh Valley continued for a long time to be the only basing point (*R., pp. 331-2*).

Comparably with that, on the edges of the Lehigh cement rock deposit there have developed by the building of additional mills, some exceptional local individual freight rates, different from, and not yet supplanted by, the general group rates, particularly from the mill of the Edison Company at New Village on the extreme eastern edge of the group to freightwise nearby points in New Jersey, and from the mill of the Allentown Company, the extreme westerly mill, to some nearby points as Reading, which have naturally had no effect in establishing additional basing points at those particular mills for only that small local business.

As production at other points increased, some manufacturers at such points severally came to offer and sell cement in the markets freightwise nearer their mills, at prices representing the sum of a base price at such manufacturer's mill plus freight therefrom to destination (*R., pp. 331*).

Basing points have thus been established by manufacturers located at the largest points of production, to

wit, Universal, Pa. (with a production of more than 3,000,00 barrels), Hudson, N. Y. (with a potential production from two mills of nearly 3,000,000 barrels), Alsen, N. Y. (with three mills producing nearly 2,000,000 barrels). (*Ex. 385, R., p. 706.*)

Since the formation of the Protective Association, and while it was operating, the Lehigh Company commenced thus to base its prices in the territory freightwise contiguous to its mill at Fordwick, Va., upon that mill as a base, thus pulling down prices throughout that territory, which other manufacturers were forced to meet (because although the Fordwick mill alone is small, the Lehigh Company, from its other mills also, could supply all demands in the territory at such prices) and Fordwick has also become a basing point (*Exs. 5, 8, 11, 12, R., p. 353*).

None of the other mills of defendants, serving this territory (to-wit, the comparatively small, isolated mills at Glens Falls, N. Y., Jamesville, N. Y., Cayuga, N. Y., and Security, Md.) has yet sold at prices based on the mill. All are in the first natural stage of development of a new point of production, where they sell with regard to the market prices based on points of larger production.

5. The Fact that the Cement Manufacturer is Compelled to Base Some of His Prices on Basing Points Other Than His Mill.

Prices in markets computed by adding freight to a base price at one basing point, would necessarily be higher in some markets than the market prices of cement there based on another freightwise nearer basing point;

and the manufacturer using only one basing point could not compete in markets freightwise nearer other basing *points (*R., pp. 331, supra, p. 44*).

For instance, prices based on a manufacturer's mill in the Lehigh Valley with freight added, because of higher freights, will be higher in New York City than the prices there of cement from Hudson or Alsen; higher in Buffalo, N. Y., than the price of cement from Universal; and so on. The manufacturer in the Lehigh Valley has to meet these lower prices or not sell. He knows that the price of Hudson cement in New York City is simply a mechanical freight ramification of prices of Hudson cement up through New England; the price of Universal cement in Buffalo, N. Y., a similar freight ramification of the price of that cement in Washington, D. C.; and so on. He knows that it would be silly for him to name the lower price only at New York City or Buffalo, leaving the ramifications of the Hudson or Universal prices in other markets below the prices at which he is trying to sell there; and so he meets the lower Hudson or Universal prices everywhere by naming a base price at those basing points and letting it ramify itself by the mechanical addition of freight rates from those points of production throughout freightwise contiguous territory.

The customary and inevitable use of different basing points in this industry operates practically thus: The base price named by a manufacturer at any point of production or basing point is determined by him and cannot be fixed without his action. When he reduces his price at a particular basing point, say, Universal or Hudson, that automatically brings down all market prices

throughout a particular section of the country. That section is measured by the combination of comparative freight rates, plus the extent of the reduction. If the reduction is 5 cents a barrel, it will bring down prices throughout less territory than if the reduction is 10 or 20 cents a barrel. So cement may be selling in a particular market to-day at a price based on one point of production, and by reason of some manufacturer reducing his price at another point of production, cement in that market may sell to-morrow at a price based on another basing point. It is not partial competition at some points, but thoroughgoing competition, direct with the rival at all the reachable markets where he sells.

The market price of cement in any market, under the acute competition thus evolved, is accordingly the smallest sum resulting from adding together the price charged by any manufacturer at any point of production and the freight therefrom to the particular market.

6. Selling at the Lowest of the Delivered Prices Computed from Several Basing Points, is the Product and Means of Severe Competition and Nothing Else.

(*i*) It has in fact existed just as it exists now (the Lehigh Company putting in prices based on Fordwick as an additional basing point, being an example and not an exception) since prior to any relevant collective activity and has not been affected by any collective activity (*R., pp. 331-2*).

(*ii*) Basing prices on production points other than the manufacturer's own mill, means loss to the manufacturers collectively:—

It probably means better profits to the few small scattered mills, in so far as they can sell their output at the market in nearby places by reason of the better service in deliveries, etc., which results from their location. As long as they remain comparatively small and scattered, they can dispose of their output and profit to that extent by their freight advantage, although increased costs of fuel and material diminish the apparent advantage.

But the four such mills in this territory belonging to members of the Protective Association (at Glens Falls, N. Y., Jamesville, N. Y., Cayuga, N. Y., and Security, Md.) together, and disregarding their scattered locations, produce only something like two million barrels of cement as contrasted with something like twenty-eight million barrels produced by the other mills of the members of the Association. These twenty-eight million barrels are sold, in nearby places, at prices based on the mills where they are produced and, in other places nearer competing points of production, at prices cut below such base prices at the mill by basing upon other producing points and absorbing the freight disadvantage to hold the markets (*Ex. 374, R., p. 706*).

A customary practice obviously evolved by and adapted to meeting, promptly and exhaustively, the lowest prices at which the product is offered anywhere, which involves constant cutting of the price received, to keep or get markets, and so an otherwise unnecessary loss by mills doing more than 90 per cent. of the business, cannot be attributed to the collective will or to anything but free and severe competition.

The Protective Association has not touched basing points, or the use thereof at all. It has only cheapened (and made more accurate by better checking of rates) without changing, the purely mechanical instrument found necessary for the practical conduct of the cement business, by publishing the freight rates from every point that anyone has used as a basing point once in lieu of the former individual publications of the same thing by the separate manufacturers.

III.

The Customary Methods of Sale Evolved in the Industry.

Cement has been sold for either present delivery or future delivery. The characteristics of such transactions in the industry have been as follows:—

Sales for present delivery represent sales practically from stock when costs and market conditions are known. They constitute the regular current business of the manufacturer wherein the dealer buys at wholesale in carload lots and sells to the public at retail. Such sales constituted 84 percent. of all the business of the defendant corporations in 1919, 75 percent. in 1920 and 70 percent. in other years (*R., p. 162*).

Contracts for future delivery relate to cement to be made in the future (because deterioration and cost preclude much storage) when costs and market conditions are unknown, and accordingly involve a material element of risk.

Contracts for Future Delivery.

Contracts for future delivery of cement have been customarily made and treated on the understanding that the purchaser (*i*) pays no consideration whatever except after the delivery of the cement to him, (*ii*) is not required to take the cement unless he wants to when the time of delivery comes, and (*iii*) is not held to the price named in the contract, but if the market goes down gets the benefit of the reduced price, whereas the manufacturer, if the market price advances, is held to the con-

tract price (*R., pp. 149, 152, 179, 183, 188, 190, 191, D-517 A-S No. 34, R., p. 1508*).

By reason of the one-sided optional character of contracts for future delivery, developed by the competition of the manufacturers for business, a contract to deliver cement in the future for resale, when costs and market conditions are unknown, would necessarily amount to the manufacturer obligating himself to deliver cement at the present market if the price should advance (so that the purchaser could then resell it and reap a profit) or at the future market if the price should decline, without receiving any consideration whatsoever therefor or even an enforceable obligation to take the cement.

The more usual method of dealing with futures differs from such an absurdity in just one particular, to wit, the contract is not for the future delivery of cement for resale, but to supply the cement entering into a particular piece of construction, as a dam or concrete road or building, known as a "specific job."

The Practical and Legal Value of Specific Job Contracts.

The specific job contract has been generally used in the industry (the same as now) since many years prior to any association or collective activity. (*D-517 B, No. 11, goes back to 1898; D-517 B, No. 17, to 1903, R., p. 1508, R., p. 149, R., p. 170-1).*

As far back as 1902, one of these specific job contracts for cement, dated 1897, of a manufacturer not defendant herein, had found its way to the United States Court of Appeals, *Wolff* v. *Wells Fargo, 115 Fed. 32.*

It is difficult to conjecture how any other method of dealing in futures could have evolved out of the particular circumstances of this industry. For instance, a specific job contract in evidence related to supplying 15,000 barrels of cement to a dealer in Kaiser, West Virginia (a town of about 1000 inhabitants) for use in building a road (*R., p. 164, Ex. D-3; R., pp. 1035-6*). The dealer obviously could not use any such quantity of cement in that locality, except in that work, and if required to take it notwithstanding the fact that the work was abandoned, would probably be ruined. The manufacturer, while willing, or forced by competition, to guarantee the price on all cement entering into that work, could not (without actual consideration or ability to secure practical performance) undertake a one-sided gamble on the future price of cement. The natural, if not inevitable, transaction was a contract wherein the supplying of cement for the specific job constituted "the substantial engagement" (*Brawley* v. *United States, 96 U. S. 167*).

The limitation on the obligations, to supply cement to, and use the cement only in, the job and not to furnish, or call for, cement for resale, has long been recognized by the courts:—

A recent case in which such a contract was examined is *Maryland Dredging Co.* v. *Coplay Cement Mfg. Co., 265 Fed. 842.* The contract covered 225,000 barrels of cement for the construction of a Dry Dock in the League Island Navy Yard, Philadelphia, and contained the following customary limitation:

> "The quantity of Saylor's Portland cement mentioned is for use in the work described, and if buyer shall sell or otherwise dispose of any por-

> tion of said cement, or use portion thereof in any work other than described herein, or fail to comply with terms of payment or any of the conditions and limitations in this agreement, the cement company may at its option, decline to make further deliveries hereunder; the buyer remaining liable for all unpaid accounts'' (*p. 843*).

The buyer sued for failure to deliver the cement, but did not prove that the cement was required for the specific job in question. The court set aside a verdict for the plaintiff, saying:

> "In the present case there was no averment in the statement of claim that 225,000 barrels of cement was the quantity required for the construction of the dry dock, nor was there proof at the trial that that quantity was required. The contract clearly falls within the class where the quantity, although approximately stated, is to be determined according to the plaintiff's requirements for the construction of the dry dock, for it is agreed that it shall not sell it, nor use it for any other purpose, and whether the quantity stated is more or less than the quantity it is entitled to call for depends upon the requirements of the contract so long as it acts in good faith'' (*pp. 844-845*).

In *Ferguson Contracting Co.* v. *Helderberg Cement Co.*, 145 A. D. (N. Y.), 494, a specific job contract was entered into for the cement required to build a lock at Waterford, N. Y. The purchaser subsequently made arrangements with a contractor who agreed to do the work and furnish the materials himself. Thereafter the purchaser attempted to obtain delivery of the Helderberg

cement. The cement company refused to deliver and the court held that the cement company was fully justified because the purchaser had incapacitated himself from using the cement in the work for which it was to be furnished.

In *Wolff* v. *Wells Fargo & Co.*, 115 Fed. 32 (CCA 9th), the court enforced a specific job contract in favor of the contractor and against the cement company. In that case the contract covered the cement requirements for a specified building "about 5000 barrels more or less". The purchaser, after using 5000 barrels of the cement asked for an additional amount required to complete the building. The court sustained the contract and held the vendor liable for the additional amount.

The practical operation of specific job contracts is this: The purchaser using the cement in the specific job calls for deliveries from time to time as the work progresses and after delivery pays the manufacturer the price named in the contract if the market has advanced, and the market price if the market has declined. Others holding duplications or specific job contracts to supply the cement requirements of a job not to be constructed, cannot in the nature of things order cement to be supplied for the job or perform their part of such contracts, send in no order for cement for the job and simply ignore their contracts, which eventually expire,—unless they resort to them for purposes of fraud.

The Associations Mentioned in the Record.

The record mentions four associations, only one of which, Cement Manufacturers Protective Association, is before the Court for adjudication. The other three are

1. The Portland Cement Association, herein called the National Association, which has been continuously active since 1902, chiefly in promoting the use of cement.

2. The Association of Licensed Cement Manufacturers, which ended with the year 1910, connected with operations under a patent on apparatus for making cement by burning pulverized coal.

3. The Eastern Association, which was tentatively organized in 1912 by the eastern manufacturers who had left the National Association, to do its work in the East, and abandoned in a few months when they rejoined the National Association.

The matters connected with them, which have received consideration here, are as follows:—

1. The National Association.

The Portland Cement Association herein called the National Association is composed of practically all manufacturers of Portland cement in the United States. Its principal activity has been to increase the uses of cement by research work to develop the best uses, the employment of engineers to supervise the construction of roads, to see that they are properly made, the introduction of uses of cement on farms, the use of cement in structural

work and many other branches. It has similarly worked to bring about the prevention of accidents and to prevent waste by developing methods of economizing fuel, preventing dust, economizing grinding, and the like. Until the decision of this Court in the Hardwood case, it also collected and distributed to its members statistics of production, shipments and stocks on hand. (*R., pp. 195-204*).

The only part of the activities of the National Association questioned by the Government, we understand, are those relating to trade practices.

Trade Practices.

Among the studies made by the National Association was one of trade practices in the industry. Many details of practices found existing in the industry, were studied by a committee from all over the country, who embodied their conclusions in a report discussing the effects of various ways of dealing with details on the manufacturer, trade and public, and recommending certain practices as ideal. This report was adopted by the Association and printed, the first edition in 1915 and the second edition in 1916, which was reprinted in 1919 (*Exs. 243-5, R., p. 664*). The report did not represent an agreement, but made recommendations on the understanding that every manufacturer was free to adopt or reject any or all of them as he chose (*Ex. 244, p. 3, R., p. 664*).

The customs and practices of the industry present two characteristics: (*i*) Generically, the customary methods of sale by the barrel at delivered prices computed by adding freight to base prices at points of production

used as basing points for present delivery or future delivery usually under specific job contracts, have been practiced for more than twenty years by manufacturers generally, and (*ii*) in the details mentioned in the Report, the practices of the different defendant corporations have been diverse and various (*R., pp. 316-321; D-517 A-S, R., p. 1508*).

The diversity in the practices of the nineteen defendant corporations with respect to the points mentioned in the Trade Practice Report of the National Association is shown by quoting from the Government's bill, merely adding after each paragraph the facts:

1. "Defined a dealer". None of the nineteen defendants has ever limited its sales at the dealer's price to persons fitting the definition, except the Pennsylvania Company, which has done so since before the report came out (*R., p. 320*).

2. "Defined a consumer". The definition was that all not dealers are consumers; and so eighteen of the defendants have not acted according to that definition.

3. "Suggested that dealers be discouraged in making sales of cement in carload lots at a smaller margin of profit than 10 cents a barrel". That is an unfair statement of the Report, because after dwelling on importance of securing the assistance of the dealer "in pushing the use of cement in competition with other materials", and saying that it is to the cement manufacturer's interest to have the dealer make a fair margin of profit on cement, it merely says: "One of the surest ways to accomplish this is to help dealers to inform themselves on the cost of doing business, a result of which will be to discourage them from selling cement for carload delivery at a

smaller margin than ten cents per barrel". (*Ex. 244, p. 4.*)

None of the defendants has made any effort to discourage dealers from making sales at a smaller margin of profit than ten cents per barrel. (*R., p. 321.*)

4. "Suggested that the customary cash discount be not allowed unless remittances were made actually within 10 days from date of invoice". Fifteen defendant companies have not strictly enforced the ten day period; four have. (*R., p. 317.*)

5. "Suggested that payment of commissions to dealers on sales made directly to consumers be discontinued". Fifteen of the defendant companies have continued to pay such commissions. Three never have. One has declined to pay them since the report (*R., pp. 320-1*).

6. "Advised against making quotations to dealers for delivery at towns other than their home towns, except under certain conditions". Seventeen of the defendant companies have always acted directly contrary to the advice. Two have always followed the course advised. None has changed on account of the report (*R., p. 320*).

7. "Suggested a form of contract for use by dealers in connection with specific work contracts and urged that its use be insisted upon". Seven companies have never required the execution of a formal contract after quotation had been accepted by the dealer. Three companies always followed that practice. Eight have followed the practice since the report. One, which had required such a contract up to the time of the report, dropped it after the report came out, in 1916 (*R., p. 318*).

8. "Suggested that dealers be required to make

monthly reports of deliveries on specific work contracts 'in order that the misuse of cement by dealers may be eliminated,' and provided a form for that purpose''. Thirteen of the defendant companies have never done this. One has always done it. Five have done it since the report came out (*R., p. 319*).

9. ''Defined a blanket contract * * * and advised that 'the practice of making blanket contracts could not be too strongly condemned.' '' Fourteen of the defendant companies have always made and still make some blanket contracts and their practices have been unchanged by the report. Three have never made them. Two have not made them since the date of the report (*R., p. 319*).

10. ''Recommended a form of 'salesman's order blank.' '' Fifteen of the defendant companies have never used such an order blank. Three have always done so. One has done so only since the date of the report (*R., p. 320*).

11. ''Suggested that in order to keep the situation more nearly in the control of the cement company all trade quotations should be for immediate acceptance, 15 day shipment, and for not more than one carload each, and provided a form for use in that connection.'' The report referred to the plan of sending broadcast thousands of unasked quotations and the enormous potential obligations of each company unless limitations as to acceptance, quantity and date of shipment were inserted in such quotations. The recommendation had to do not with actual transactions, but with arranging quotations so that the manufacturer would not find himself involved in contracts he never meant to make and beyond his ability to perform, through the acceptance

of unlimited quotations. The control was simply arranging matters so that the individual seller's mind would in fact have to meet that of the buyer. These limitations have appealed to practically all the defendant companies only three or four sending out their general trade quotations without such limitation. But there has been considerable variation in the details (*R., pp. 316-7*).

12. "Advised against granting extensions in time of delivery." The report did not advise against granting extensions in time of delivery, but only that a clause be inserted in contracts which would enable the manufacturer to enforce the delivery date. One of the defendant companies always followed the practice. Seven of them have never used it. Six have used it since the recommendation, but one of those dropped it almost immediately after adopting it. Five have put it in their quotations, but never enforced it (*R., p. 318*).

13. "Suggested that dealers be required to state in their bids the brand of cement they proposed to furnish." None of the defendant corporations has ever done this. (*R., p. 321*).

14. "Defined specific work as a job requiring a carload or more of cement for a specified period of time beyond 15 days." There was no recommendation here. It was simply a definition of the subject matter to which other suggestions applied.

"15. "Suggested that quotations for specific work should be for acceptance within 5 or 15 days, etc." The Report discussed how long a quotation at a particular price should be acceptable, on the general theory that "the longer the acceptance period the greater are the manufacturer's potential obligations and such obliga-

tions, particularly in an active market may be undesirable." The effect of a limitation on the period of acceptance of a quotation is of course merely to give the manufacturer a chance to revise his offer if the period is exceeded. Sixteen of the defendant corporations limited their specific job quotations to acceptance within 15 days. Three have never done so. (*R., p. 318, Ex. 244, p. 12.*)

16. "Suggested that specific work sales contracts should accurately describe the work as to location, character, name of owner, contractor or other party doing the work, and provided a form to be used." Such a description of the work for which the cement is to be supplied has always been an inevitable part of a specific job contract, which is differentiated from other contracts by the fact that it is limited to supplying the cement entering into a specific piece of work. The description of the work is, of course, a blank in all forms of contract.

17. "Suggested conditions under which sales should be made to railroad companies, etc." Six of the defendant corporations have acted in accordance with the suggestion as to railroads. Thirteen have acted otherwise, and never in accordance with the suggestion (*R., p. 319*).

18. "Suggested that 'when quotations are issued covering a change in price, the change in price should be made effective on the date quotations are written' in order to avoid price tipping." The Report pointed out that in a few cases the manufacturer had sent out notices to the effect that in 5 days he would advance his price, which the Committee thought unbusinesslike as tending to cause dealers to defer their purchases, not to keep their stocks at a level to meet demand, foster specula-

tion, etc. (*Ex. 244, p. 15*). None of the nineteen defendant corporations has ever done this, with one exception, and that exception has continued to give advance notice of its change in price (*R., p. 321*).

19. "Advised against guaranteeing prices against decline." One of the defendants, Glens Falls, always had a written guarantee against decline. None of the others had such a written guarantee until 1918 or 1919, although in practice the buyer under a specific job contract always got the benefit of any reduction in the market price (*R., p. 321, D-517 A-S No. 34, R., p. 1508*). Since 1918 or 1919 all the defendant corporations have guaranteed in writing against decline in price (*R., p. 321*).

20. "Recommended that no cement be sold or quoted on specifications other than those of United States Government or of the American Society for Testing Materials." The Report said "The company wishing to make sale should, of course, use its influence to have the specifications made regular" (*Ex. 244, p. 16*).

21. "Recommended that charges for bin tests should be borne by the purchaser." The recommendation was that the "cost" should be borne by the purchaser and against free service (*Ex. 244, p. 16*). The facts as to the charge for this service have been:—

From about 1912 to about June, 1915 (before the Report), the usual charge for this service was 5 or 6 cents a barrel.

Before the Report some of the companies reduced the charge to 3 cents a barrel, and later practically all the rest made a similar reduction, so that the usual charge was 3 cents a barrel until 1920.

In 1920 some of the companies dropped the charge entirely and the others followed (*R., p. 320*).

22. "Recommended that under no circumstances should cement manufacturers bear the expense of commercial laboratory tests." None of the nineteen defendant companies have ever in their history borne such expense, except four who have continued to do so since the Report (*R., p. 320*).

23. "Suggested comprehensive rules and regulations with reference to handling sacks." This is an erroneous statement, because the Report discussed the theory of sacks somewhat comprehensively, but suggested nothing in the nature of a rule or regulation except that "only such cloth sacks as are serviceable and can be used again be repurchased", that the cement company's count of inspection should be final and that the cost of returning bags should be borne by the purchaser (*Ex. 244, p. 17*). Five of the nineteen defendant companies have always used the practice recommended before the Report was made. One of the defendant companies adopted that practice when it commenced business in 1917. Thirteen have not, and do not, follow the practice recommended (*R., p. 320*).

24. "Urged that credit information be interchanged freely among cement companies." That has been done to the extent of the protective credit information contained in the reports of the Cement Manufacturers Protective Association.

2. The Association of Licensed Cement Manufacturers.

In 1906, after extensive litigation concerning a patent granted to Hurry & Seaman, who were the first to burn cement by the use of pulverized coal in place of oil, and had been granted broad claims covering apparatus comprising any means of accomplishing that, an arrangement was made whereby some of the then eastern manufacturers took licenses, paying the owner of the patent $200,000 a year, and sub-licensed others (*R., p. 725*). The drawing of the patent is reproduced in the article on Cement in the Encyclopaedia Brittanica.

Later on, January 13, 1909, after the decision in Rubber Tire Wheel Co. *vs.* Milwaukee Rubber Works Co., 154 Fed. 359 and like cases, and relying thereon, supplemental licenses were executed making it a condition of the use of the patented apparatus that the product made thereby should not be sold, within certain territory, below a specified minimum price, the licenses not affecting the price of any cement except that made by the use of the patented apparatus (*R., pp. 757-8, p. 762, Ninth*). The licenses containing this condition were terminable by notice January 1, 1911. Although the decisions upon which it was based had not been changed and the patent was still in force and not finally adjudicated, the supplemental licenses were not continued after January, 1911, and the association then ended (*R., p. 726*).

No inference concerning the intentions of the defendants in forming Cement Manufacturers Protective Association can be drawn from the patent licenses of fifteen years ago, because—

(*i*) Those licenses being within the monopoly of the patent and not affecting any other cement (*Ex. No. 549, R., pp. 757-8; p. 762, Ninth*), represented a usual method of doing business upheld by the courts at that period (*see Henry* v. *Dick, 224 U. S. 1, 86 (1912); Rubber Tire Wheel Co.* v. *Milwaukee Rubber Works Co., 154 Fed. 358; Indiana Mfg. Co.* v. *Case Threshing Machine Co., 154 Fed. 365; Goshen Rubber Co.* v. *Single Tube Tire Co., 166 Fed. 431, R., p. 726*). The licenses did not apportion territory as stated in the opinion. They merely provided that the minimum price should apply only within limited territory.

(*ii*) The license agreement of 1909 was terminated voluntarily pursuant to a provision therein, on January 1, 1911 (*R., p. 726*). If these defendants are to be judged by the disposition of other men years ago, their later disposition to free themselves from any restraint seems a fairer selection.

(*iii*) While there were fifteen licensees (*R., pp. 726, 757*) three of them (the American, Catskill, and Whitehall Companies), are not defendants, and the management of many of the remaining twelve has changed. The rest of the present Association of nineteen companies were not connected with the patent licenses.

(*iv*) Since 1911 the unwillingness of the defendants to limit individual opportunity by the slightest restraint has been repeatedly demonstrated: For instance, in 1912, when as a result of withdrawals of the eastern companies from the National Portland Cement Association (*R., pp. 194-5*) an Eastern Association was abortively started as a substitute, they declined to enter into an

Association of the kind known as the "Eddy Plan" or "Open Price Plan" when presented by its author Mr. Eddy (*R., pp. 781, 782, 783*). And from December, 1914 to May, 1915, there was a trade war in this section of the industry wherein prices were reduced far below cost, not to get immediate business, but to inflict financial damage which it was thought one of the rivals was not in a position to stand (*R., pp. 332-3*).

(*v*) The law has long condemned attaching weight to such past incidents (*Wigmore, §194, and cases cited*). There has been no change in the law for centuries:—

> "1694, Holt, L. C. J., in Harrison's Trial, 12 How. St. Tr. 833, 864, 874 (charge of murder; a witness was called to speak of some felonious conduct of the defendant three years before): 'Hold, Hold, what are you doing now? Are you going to arraign his whole life? How can he defend himself from charges of which he has no notice? And how many issues are to be raised to perplex me and the jury? Away, away. That ought not to be; that is nothing to the matter'."

3. The Eastern Association.

By resignations and otherwise, most of the eastern production was out of the National Association in 1912 (*R., pp. 194-5*). In November 1912, the eastern manufacturers met to form an association with a plan following that of the National Association (*Ex. 554, R., p. 784*). At the second meeting, Mr. Arthur J. Eddy, author of the plan called the "Eddy Plan", "Open Price-Plan" in the petition herein, whose book on "open competition"

had then recently been published, appeared and explained his ideas (*R., p. 781*). At the next meeting it was unanimously decided not to adopt Mr. Eddy's plan (*R., p. 782*). At the following meetings there was discussion of what the association should undertake, in employing road engineers, what sort of statistics should be collected, etc., (*R., pp. 790-2*). At the meeting, February 28, 1913, the members having rejoined the National Association (*R., pp. 194-5*), the tentative organization was abandoned (*R., pp. 777-8*).

THE HISTORY, PURPOSES AND RESULTS OF CEMENT MANUFACTURERS PROTECTIVE ASSOCIATION.

The existence of this litigation, and more particularly the criminal case against these companies and many individuals, has tended to give to the Cement Manufacturers Protective Association a factitious importance bearing little relation to the place it occupied in the life and affairs of the members. It was not an artificial plan invented to control this portion of the industry, but the product of a natural evolution, the spontaneous reaction for self-preservation against serious injury from abuses and evils incident to specific job contracts, when presented in most acute form.

The Association was formed to give organized, regulated form and definite limits to these efforts of the manufacturers to protect themselves by exchanging and developing information defining the extent of the obligation of each manufacturer under his specific job contracts. When it was formed, it was decided that it should carry also the limited protective credit service, the statistical service to which these companies had long been accustomed (*R., pp. 195, 337*) and the taking over from the individual companies of the publication of books of freight rates, so that the same books showing the rates between the same points were published once instead of several times as formerly.

1. The Facts Leading up to the Organization of Cement Manufacturers Protective Association.

In the latter part of 1914 and early in 1915 there was a bitter trade war between the two largest companies in this section of the industry (wherein one reduced his prices far below costs, not to get immediate business but to inflict financial damage which it believed its rival was not in a position to stand, *R., p. 332*), during which all prices for upwards of three months were reduced below bin cost and far below commercial cost (*R., p. 333; Ex. 675, R., p. 963*). In May, 1915, the war ended and prices promptly rose to their former level by July, 1915 (*R., p. 333*).

During this cut-throat competition, many specific job contracts had been taken at prices below costs (*R., p. 333*). In the fall of 1915 the sales managers of sixteen of the defendant corporations met with lists of their outstanding specific job contracts in an effort to define the actual obligations by matching their contracts to reveal duplications and bringing together the facts as to the cement still required for each job so far as known (*Ex. 530; R., p. 715*).

The transactions at this meeting and a succeeding meeting in November, 1915, related only to specific job contracts and were along the general lines subsequently given effect in the specific job contract activities of the Protective Association (*Ex. 530; R., p. 715*).

In November, 1915, a meeting of southern manufacturers (not defendants), attended by representatives of six defendant Lehigh Valley companies, was held in Washington (*Ex. 531; R., p. 716*). This meeting was the

occasion for a sharp definition of the policy of one of the largest companies, that it would not be represented at any meeting with competitors whatsoever unless the matters to be considered were definitely defined and it was conducted under legal advice (*Exs. 532, 534; R., pp. 717, 718*).

Thereupon this spontaneous specific job activity was put in definitely regulated form, and the three other activities relating to credits, statistics of supply and the publication of freight rates, added to it, in a Plan, Constitution and By-Laws, sent to eastern manufacturers shortly before January 6, 1916 (*R., pp. 337-8; Ex. 13, R., p. 353*).

2. The Plan of the Association.

The "Outline of Plan for a Protective Association of Cement Manufacturers" (*Ex. 13, R., p. 353*), sent to the eastern manufacturers of cement with a proposed constitution and by-laws, subsequently adopted at a meeting January 6, 1916, recited the purposes and nature of the proposed Association substantially as follows:

> "Conspicuous among the evils from which every manufacturer of Portland Cement has long suffered have been certain notorious abuses arising from what amounts to fraudulent misrepresentation. The most common and flagrant instances are those which have to do with misrepresentation concerning contracts (known as "specific job contract"), competitors' acts, and financial responsibility.
>
> Although these abuses are too well known to require elaboration, it may be desirable to look at an illustration of each, with a view to determining

whether it is practicable in a measure to correct them:

(1) It has become common, for example, in cases of jobs in fact involving the use of, say, a thousand barrels of cement, for purchasers to contract with each of several manufacturers for, say, two thousand barrels of cement to be used on that specific job. This pernicious practice results in purchasers obtaining what, as a practical matter, amounts to an option extending over a long period; and, in the aggregate, such options induced by, and based on misrepresentation, impose on the manufacturer one-sided, uncertain obligations covering a considerable portion of his output, frequently curtailing his business and resulting in loss.

It is apparent that such abuses could not exist if the truth were known. If the manufacturer knew the facts concerning the job, the amount of cement needed, whether his or some other cement was being used thereon, he would obviously be in a position to escape the disastrous consequences of such misrepresentations. The plan hereinunder outlined is designed to make the truth available and thus defeat such misrepresentations and their consequences."

The outline then referred to the common experience of every manufacturer "with statements made to him not only by dealers, but even by his own salesmen" concerning competitors' practices, and said:—

"In the following plan it is not proposed to provide the fullest relief against such misrepresentations, because reports of outstanding or active offers or quotations may be objectionable, but it is proposed to give the manufacturer an opportunity of checking the representations of dealers and

> salesmen by including with the information as to specific contracts, the price at which these past transactions have been closed, so that false statements may become less frequent."

Concerning the credit activities, the outline of the plan said:—

> "As to that kind of misrepresentations which has to do with credits, the plan explains itself. Here, again, the correction of the evils resulting from the misrepresentation is to be sought in making the truth available."

As to the statistical activities, it said:—

> "In addition to the correction of these abuses by meeting misrepresentations with the truth to the extent indicated, the plan contemplates the giving of certain statistical information concerning the past, which has heretofore been available in less convenient form and is included because it may be included without much additional inconvenience to anyone."

As to the freight rate books, it said:—

> "The plan further contemplates the compilation and publication of freight rates to relieve each manufacturer of the great burden of keeping track of this necessary information."

This Outline of Plan, with a proposed Constitution and By-laws was submitted by the individual manufacturers to their respective counsel, including eminent leaders of the bar in Philadelphia (*R., p. 404*) and New York (*R., p. 432*), who advised that there was no legal objec-

tion to the activities therein outlined as long as the work was kept "within the lines laid down" (*R., p. 404*).

The plan was also taken to Washington and submitted to Mr. Hurley, then acting as chairman of the Federal Trade Commission (*R., p. 288*).

The activities of the Association and the way those activities were conducted, were exactly the same from the Fall of 1917 (*R., p. 161*), when the Association commenced employing engineers to investigate the amount and brands of cement which would be used under specific job contracts. The difference prior to that was only this: In the Fall of 1916, the investigation of the requirements of specific job contracts was accomplished by employing Dodge & Company, a well-known commercial reporting house, to make the investigations at a fixed charge per contract; and for the months prior to the Fall of 1916, the facts as to the requirements were developed only to the extent of bringing together such information as the members themselves had.

The extent and limits of those activities have been recited (*supra, p. 7 et seq.*). It remains to make plain the results:—

3. The Results of the Credit Activity.

The only purpose or result of the credit activity was, obviously, to enable a manufacturer to judge somewhat better whether to extend credit or require cash or security.

In the opinion there are quoted some remarks of credit men concerning discounts and rebates (*R., p. 1804*); and the petition mentions discounts as one of the so-called

"uniformities". But there was no report whatever of terms, discounts, rebates or anything of that nature and no act of that kind by any manufacturer was ever disclosed (*R., p. 166*). As to all such things, the Association could produce no result whatsoever.

4. The Results of the Specific Job Contract Activity.

The purposes and results of the activities in connection with specific job contracts, were as follows:—

(*a*) The activities did not tend to diminish the number of specific job contracts. On June 1, 1920, 23,606,000 barrels of cement were called for on the face of such specific job contracts then in effect, the largest amount in the history of the industry (*R., p. 166*).

(*b*) The activities did not, and in their nature could not, diminish the obligation of any manufacturer to deliver cement under specific job contracts; and there is no suggestion in the evidence that any manufacturer has ever failed fully to perform his obligation under any contract.

(*c*) Upon learning the facts concerning the extent of his obligations under such contracts, the individual manufacturer in fact cancelled the amount which would not be required in the work, and so was not called for by the contract, in approximately two-thirds of the cases, and did not act on the facts in the other third.

Thus, in 1920, of 1392 contracts investigated and found to be padded or spurious to the extent of 3,552,865 barrels, 978 were wholly or partially cancelled to the extent of 2,104,653 barrels, and the remaining 414 contracts,

involving 1,448,212 barrels not required for the job or covered by the contract, were not cancelled in whole or in part (*R., pp. 350-1*).

The average time which elapsed between the report of the investigation and the date of cancellation was 86 days per contract (indicating the freedom of the manufacturer to do as he chose and the independence and care with which he proceeded); and since cancellations were reported so that these facts were known to all the members, it is plain that there was no agreement (*R., p. 351*).

(*d*) The direct purpose and result of the specific job contract activities of the Association was to inform the manufacturer as to the extent of his obligation under his own specific job contracts, and to enable him to protect himself against being defrauded by the unscrupulous obtaining cement from him at a price below that at which he was willing to sell (and often below his advanced costs), by the false representation that the cement was not for resale but for use in a specific job to which he had contracted to supply the cement at a lower price.

The secondary effects of enabling the manufacturer to protect himself against this fraud were precisely those following protection against having his cement stolen by any other means—on his finances, on future prices to make up for the loss, in the market where the stolen goods might be offered, and in law, policy and morals.

(*e*) An indirect purpose and result was a tendency to make the whole industry more honest and efficient, by diminishing the advantage which the dishonest dealer had had over the honest dealer, by enabling the manufacturer to conduct his business with knowledge of his own obligations, and by discouraging fraud—in brief, to

check an extreme example of a recognized economic abuse working great harm and produce a recognized economic benefit (*R., pp. 298-9*).

(*f*) The specific job contract activity did not, and could not, lessen competition. Any cement disclosed as not required for a specific job or covered by the obligation of a specific job contract and cancelled by the manufacturer, simply became cement which the manufacturer knew was unsold and available for sale by him in competition with other manufacturers.

(*g*) In the specific job activities, it does not "appear that the defendants have done more than was fairly justified by reasonable self-protection" (*212 Fed. 476*).

The Errors in the Opinion Below Concerning the Purpose of the Specific Job Contract Activity.

(1) The opinion finds "of course, if a company wished to recognize an agreement with a contractor or person who had expected to supply cement for a specific job and who did not get the work but was willing to take the cement notwithstanding, it might do so" (*R., p. 1805*).

While this freedom of the manufacturer is plain, these and other statements in the opinion concerning the matter of specific job contracts indicate misunderstanding:—

When a manufacturer supplied cement to a person "who did not get the work but was willing to take the cement notwithstanding", the manufacturer was not "recognizing an agreement". The agreement was (as the Court pointed out elsewhere *R., p. 1801*) to supply the cement to a specific work. It could not be recognized or performed unless the other party did get the work.

What any manufacturer does when he gives cement to such a person as the Court describes, is simply to deliver to him a certain amount of cement at the price named in the contract. Any company might deliver any quantity of cement at any price without that being disclosed in any way through the Association, because nothing concerning any sale, except the facts from specific job contracts, were in any way reported or disclosed.

On such misunderstandings, the Court below wholly ignored the real purpose and function of the specific job activity and concluded that "one of the prime reasons" for the specific job activity "was to exert a moral compulsion upon a company which was inclined to recognize a contract, such as I have just referred to, and to make assurances doubly sure that over any future time there would be no 'free' cement" (*R., p. 1806*). It is to be observed:—

(*i*) If any manufacturer wished to ship anyone the amount of cement named in a specific job contract, or more or less, at the price named therein or a higher or lower price, he could freely do so without disclosing the sale in any manner through this Association.

It seems, we submit, inconceivable that men intelligent enough to be entrusted with the conduct of large businesses, could have thought they were exerting "a moral compulsion" as to anything connected with sales when they left everything connected with 70 per cent of the sales wholly undisclosed and arranged for learning only what part of specific job contracts was "duplication" or "padding".

(*ii*) What the Court refers to as "free" cement is cement obtained by fraud. The purpose of this activity

was to enable the manufacturer to know the extent of his contract obligations. An incident of that was that he could protect himself against being cheated—against having his cement taken by false pretense.

(2) The opinion also mentions the fact that "upon one occasion cancellations amounted to no more than one-fourth of a barrel of cement" as suggesting that "one of the prime reasons" for the specific job activity was "moral compulsion" against "recognizing" non-performable contracts (*R., pp. 1805-6*).

But the reporting of the fact that a balance of one-fourth of a barrel—the difference between the contract estimate and amount delivered to a specific job—was no longer an obligation, means simply that these defendants, like all large business organizations, necessarily operate by rule; and once an order is issued, a clerk carries it out without thinking, or authority to think, whether a particular balance is important or unimportant. Unless the cancellation of the undelivered balance of that particular order had been reported, it would, of course, have been carried on the report of uncompleted specific job contracts (*R., p. 352*). It adds nothing to the fact that the Association engaged in reporting the particular facts needed to disclose duplications of outstanding specific job contracts.

The Reasons for Employing this Method for Protection.

To leave nothing unexplained, we mention some of the reasons why protection assumed this form, instead of suit which the Government has suggested as more appropriate:—

(*a*) If the manufacturer, having made a contract for "the full Portland Cement requirements of the following described work" (*Ex. 571, R. p. 821*), pursuant to the common understanding that unless the dealer (or his customer) should be awarded the contract to construct the work he would not have to take the cement, brought suit against a dealer not getting the work, who could not possibly perform by taking "the full Portland cement requirements of the following described work", under a contract expressly providing that the cement should not be used for any other purpose, it is doubtful whether he would succeed, before a Court and jury, in accomplishing more than making himself ridiculous.

(*b*) Suit, in view of the long-established general understanding, would certainly cause the manufacturer to lose more in custom than he could possibly recover in damages, even if he succeeded and the dealer was financially able to respond. Every competitor would promptly circulate information concerning the suit among the manufacturer's dealer customers; and he might as well shut down, because he cannot operate without the dealers' assistance.

(*c*) Suit would not define the manufacturer's obligations in advance. It would not inform him which of his specific job contracts were duplications or to what extent any was padded. It would not free his cement for sale. If it were possible, and the competition were suppressed long enough, to let repeated suits narrow the contracts to those with the contractor (or his dealer representative) who would actually construct the job and use the cement for it, that would merely make it more difficult for contractors to bid freely for the construction work.

(*d*) And even when that had been all accomplished, the surplus padding would still present a vast amount of uncertain obligations, tending to hold cement from the market and prevent efficient manufacturing operation, and constituting means which would be used by the unscrupulous to defraud the manufacturer and injure the honest dealer.

The Reasons for Collective Action.

The evils connected with specific job contracts could not be met individually:—

(1) The reporting and matching of the contracts was essential. No manufacturer could learn of his duplications without knowing what contracts the others had made.

(2) The expense of individual investigation made it impossible. To send a qualified man to, say, Maine, to look into a single contract and then to, say, western New York and then to Delaware, and so on, would mean such a consumption of his time and such expenses that the cost of investigating would be prohibitive. On the other hand, when the jobs in a particular neighborhood could be grouped and a man sent there to investigate the collection, the cost of each was immensely reduced.

(3) The evils incident to these specific job contracts were evils affecting the industry as an industry. They meant that the honest dealer was at a disadvantage compared with the unscrupulous dealer and put a premium on dishonesty. They tended to make both the manufacture and marketing of cement, until it reached the public,

a blind, dishonest gamble, with the reward depending on comparative degrees of luck and cheating, instead of what an industry with innumerable people depending on it, should be. The eradication of them by developing the truth went far beyond the interest of any individual company.

It was not practicable to investigate all specific job contracts. In the year 1920, when the failure of transportation made a temporary shortage of cement in the markets, the maximum of 54 per cent. of the specific job contracts were investigated (*D-9, R., p. 1048*). It is to be noted that more contracts were investigated when market prices were very high (and so manufacturers would not naturally want to avoid real contracts), in the face of the fact that prices would inevitably fall, than were investigated at any other time. When to that is added the fact that all the manufacturers' written specific job contracts then provided that if the price went down the cement would be delivered at the market price, it is plain that the only purpose of the investigations were to develop the truth as to what cement was free and what covered by obligations.

5. The Resuts of the Statistical Activities.

In this industry statistics of production and shipments have been common for many years (*R., pp. 195, 337*). The defendants at least, could not have expected them to exert restraint, for with such statistics from the national Portland Cement Association, they had recently been through a bitter cut-throat war. And the evidence proved that the statistical information of Cement Man-

ufacturers Protective Association did not, during six years, exert the slightest restraint:—

(a) Each manufacturer freely exercised his own independent judgment and will, the nineteen producing, selling and profiting diversely and variously and in ways comparable to no conceivable common standard or judgment, throughout the six years (*infra, pp. 120, 127, 129*).

(b) There is much evidence that the individual defendants used the reports to increase their efforts to get ahead of their competitors; and no evidence of any other effect on competition. Illustrations of how these reports in fact stimulated the individua' manufacturers to increased efforts to get business away from each other, admit of no speculation concerning the result in fact produced (*Exs. D-176, R., p. 1112; D-29, R., p. 1056; D-30, R., p. 1056; D-450, R., p. 1468; D-31, R., p. 1056; D-32, R., p. 1056; D-33, R., p. 1056; D-34, R., p. 1056; D-182, R., p. 1115; D-183, R., p. 1115; D-184, R., p. 1115; D-185, R., p. 1116; D-178, R., p. 1113; D-180, R., p. 1114; D-481, R., p. 1491; D-395, R., p. 1439; D-225, R., p. 1132; R., p. 334*).

(c) The suggestion of the petition that "comprehensive statistical data" (*R., p. 5*) necessarily restrains trade seems to lose sight of important distinctions. The disclosure of all the "minutest details" (*257 U. S. 410*), "all the intimate details" (*262 U. S. 389*) of terms, conditions and special arrangements between a manufacturer and each purchaser is "comprehensive" but only remotely "statistical data". The mere comprehensiveness of a particular kind of information concerning the existing supply is a merit, because:—

(*i*) Summarized or incomplete data—less than the whole truth—is apt to be misleading. For instance, here a total of the existing supply might mean either a great quantity on hand or shortage in Maryland and Virginia or northern New York, regions which, by reason of freight, do not serve the same markets.

(*ii*) Any mere summarization involves some risk of collective guidance by the way the figures are handled, which is totally absent where the information is merely "the truth, the whole truth, and nothing but the truth".

(**d**) There is no room for the suggestion that statistics of production, stocks, shipment and commitments necessarily restrain trade. Such information is recognized by all authorities as essential to effective competition and a necessary part of industry as it is carried on today—with large scale production, very wide markets, large fixed investment, narrow margins of profit, great numbers of employees dependent upon the prosperity and steady operation of particular enterprises for their livelihood and countless others indirectly dependent thereon, and risks even more than proportionately multiplied.

Professor Adams of Yale testified that statistical information is "essential to effective competition, and in general it is highly beneficial" (*R., p. 299*).

Jevons, the great economist, says that knowledge of the facts always make competition more keen and perfect and that if business men will not voluntarily give each other the essential statistical information, they ought to be compelled to do so by law.

> "It is the very essence of trade to have wide and constant information. A market then, is the-

oretically perfect only when all traders have perfect knowledge of the conditions of supply and demand.

* * * * * * * * * * *

So essential is a knowledge of the real state of supply and demand to the smooth procedure of trade and the real good of the community, that I conceive it would be quite legitimate to compel the publication of any requisite statistics." (Jevons, *The Theory of Political Economy*, 3rd ed. 1888, pp. 870-88.)

Similarly the report on "*Business Cycles and Unemployment*" prepared by President Harding's Conference on Unemployment, urges business men to co-operate in the exchange of statistics as a matter of social duty, saying (p. 11):

> "The greater part of the material presented by the Department of Commerce is based upon data furnished voluntarily either by industries or by trade associations. One of the difficulties in making such returns effective for their purpose is the refusal of a few firms to contribute to the common pool through either of these channels. Such refusal destroys the possibility of common knowledge in certain industries and seriously undermines the ability of business men in such industries to form proper judgments. It also decreases the area of knowledge of the currents of business as a whole necessary to each separate business.
>
> The vast majority of business men have given enlightened cooperation in these efforts. But the minority who refuse to cooperate are doing injury to the business fabric as a whole."

Mr. Hoover, who as Secretary of Commerce of the United States, may be expected to know about such matters, said in his speech before the Trade Association Conference April 12, 1922:

> "Statistical information as to productivity and national stocks is needed not alone by the man in a particular industry but the same information is needed by men in other industries and it is needed by every agency of the Government. A study of the trend of production and consumption does not imply restraint of trade. If it does, then the whole statistical basis of commerce that fills one-third of our newspaper space would need to be abolished. If we abolished it we would be bankrupt in ten years."

And in his address before the National Distribution Conference January 14, 1925, he emphasized the need of such information, saying:

> "It is a truism to say that no individual business enterprise could succeed or be conducted without waste if it does not know accurately its stocks, the volume of output or sales, the rate of stock turnover, or its orders, or the prices, assets and liabilities and the relation of these to previous periods. Neither can the business of a trade, as a whole, or the nation itself, function efficiently unless it knows these very things.
>
> The fundamental of every economic action is to first determine the fact. Moreover, as business is a moving thing, the facts must be recurrent in short statistics."

And, after exceptional experience, he then said:—

> "The government can do much in collection and distribution of statistical information. Indeed the Department of Commerce has greatly improved and expanded these services in the last three years. No other nation provides so complete a service today. It needs still greater improvement. However, a considerable part of our statistical service can be better provided by the different trades themselves than by the government."

6. The Results of the Activity Concerning Freight Rates.

The results here seem apparent from the facts:—

The publication of the books collectively simply took the place of previous separate publications by individual manufacturers who published books of the same form and contents,—with increased accuracy resulting from more thorough check of the rates (*R., p. 150*).

The collective publication resulted in a saving of much money annually, since individual freight departments each costing about $30,000. a year (*R., p. 412*) could be cut down.

The rates given in the books were as accurate as it was possible to make them, and no inaccuracy of any consequence or significance has been found.

The treatment of fractions resulting from changing tons to barrels, was in accordance with the regulations of the Interstate Commerce Commission (*R., p. 245*). The changes which had to be made in the Alpha books, by reason of changes in rates since they were printed—the other inaccuracy suggested by the Government—were made before the books were sent out or used (*R., p. 444*).

Any inaccuracy in the books was calculated to injure the manufacturer, because if he quoted on an erroneous rate, he would have to pay the difference. Accurate rates in every other respect would have precisely the same effect as inaccurate rates.

The books did not purport to give rates from any point which no one had ever used as a basing point—either rates from the scattered small mills or individual local rates from a particular mill on the edge of the Lehigh district to a nearby point. They gave the rates from every point which anyone had in fact used as a basing point, adding during the operation of the Association Fordwick, when the Lehigh Company commenced to base on its mill at Fordwick. Those were the only rates of any general importance to all and the only rates which the individual manufacturer had formerly published, in marketing his product (*supra, pp. 63-71*).

The purpose and result of the publication of these books was:—

(*1*) Giving effect to the purposes of the law governing freight rates, that all rates should be both equal to those similarly situated and known.

(*2*) The saving of much economic waste otherwise involved in the separate figuring of the same rates by traffic experts employed by each company.

(*3*) The securing of somewhat greater accuracy by reason of the additional checking and rectification of errors by combined experience.

(*4*) The collective publication had no other effect. All the other effects mentioned in this connection are obviously effects of using the basing points or of the

freight rates themselves, and equally present or absent when these same freight rates are published many times by individual manufacturers or once collectively.

The Error in the Opinion Below Concerning the Freight Rate Books.

The Court found that "the freight books standing alone and in so far as they merely record a compilation of freight rates, are harmless" (*R., p. 1802*); and that "their vice, if such it be, resides in the fact that there is a concert of action upon the part of the defendants in so using them that all prices quoted are for delivery at the point required by the purchaser" (*R., p. 1802*).

The Court, apparently using the term "concert of action" in the sense explained in United States *v.* Piowaty, (*251 Fed. 375-377*), then finds that there is no agreement concerning such practice, saying "it is said that this method of marketing cement is a trade custom which came into being before the formation of the Association; that it results from the independent and uncontrolled action of each manufacturer and is in no way to be attributed to agreement or to any activity of the Association. Very probably there is no agreement now in force by which such practice is to be followed" (*R., p. 1802*).

But the Court then says that "the custom, however, was at one time the subject of an agreement", the patent licenses of 1909 and 1910. The principal mistakes in this are:

(*i*) This method of selling at delivered prices computed from the points of large production, was not created by the patent licenses (*supra, p. 60*).

(*ii*) The same degree of sharp competition could not exist without it. If each manufacturer based his prices only on his own mill, he would be excluded from selling in markets freightwise nearer other mills (*supra, p. 67*).

(*iii*) The mere collective publication of rates could not control conduct in selling f. o. b. delivery point or f. o. b. mill; and if all prices were based on a manufacturer's own mill, the freight rates would still be required (*R., pp. 149-150, 152*).

7. The Errors in the Opinion Below Concerning the Purpose and Effect of the Bag Report.

The Court below seems to have attached importance to the bag report, saying "in my judgment it was something more than a desire for statistics, as such, that was responsible for the Association undertaking to find out from the several companies whether returned bags were first cleaned and then counted or were first counted and then cleaned. * * * A disclosure of what was being done in making allowances for bags, while it could be used for competition was, I think, more likely intended to impose a restraint upon any company that was shading prices" (*R., p. 1804*).

This seems based on misunderstanding:—

(*i*) The report did not show "what was being done in making allowances for bags" in any way that could disclose the "shading" of any price. The only figures were the totals of bags received and found unfit for use during the past quarter. There was no disclosure of what was done with respect to bags returned by any particular

purchaser or in connection with any particular transaction *(Exs. 85, 66, R., p. 371)*. There was no disclosure of the charge or allowance for bags (*R., p. 166*). There was no disclosure of any special allowances, commissions, rebates or arrangements with purchasers in connection with any sale. Nothing whatever was disclosed concerning 70 per cent. of the sales (*supra, pp. 11, 15*).

(*ii*) During the discussions leading up to the decision to have this bag report, sundry remarks were made by individuals. It was pointed out that giving credit for worthless bags amounted to a rebate. Also that the form of report would not correct that, but "if your company were allowing 10 per cent. and one of the other companies was allowing 3 per cent., you would look into your bag question very carefully to see the condition that your bags were shipped out in and packed up, if necessary. * * * That is where I think it would probably be of benefit to us to have this information" (*R., p. 471*).

(*iii*) The report showed percentages of bags unfit for use varying from ½ per cent. to 4½ per cent., one company rejecting nine times as many bags as another (*R., p. 484*). It was to see whether the better results could be attributed to whether the bags were counted before or after cleaning the questionnaire was sent out. The interest attaching to this and the bag report was this:

Expensive bags are necessitated by the extreme fineness and weight of cement and the strains from piling and jolting incident to its transportation. They are merely an instrument of delivery, taken back at the price advanced for them. During the five years, 1917-1921, the losses of these manufacturers in bags amounted in all to

$7,229,698.82 (*Ex. D-274, R., p. 1293*). Any information enabling a manufacturer to judge or better the efficiency of his bag department was of legitimate, helpful interest; and the quarterly diverse percentages of losses could serve no other purpose.

8. The Errors in the Court Below Concerning Trade Practices.

Much of the reasoning of the Court below, with respect, seems to proceed upon confusing actual purposes in forming this Association with desires of some or all manufacturers, to which the activities of the Association were not in any way related.

For instance, an individual on one occasion said in a discussion relating to whether the totals of bags returned and found unfit for use should be reported, that allowing credit for worthless bags was equivalent to a secret rebate and, "we want our practice to be the same as the others". Any responsible manufacturer of anything, despises secret rebates (as distinguished from fair, honest competition) and desires freedom from such indefensible practices, unless others resort to them. But that desire has nothing to do with this Association, under which everyone might give secret rebates, directly or in many disguises, including allowing any customer credit for worthless bags, without disclosure.

Similarly, the Court found that when the Association was formed, the manufacturers were pursuing ten customary trade practices of the industry which have been the subject of comment by the Government (*R., p. 1800*). But it then suggested that since "some of the foregoing prac-

tices mean nothing more than that the elements entering into a quoted market price have been separately listed" and "each company had a vivid recollection of a ruinous price war that had been waged a year or so before. * * * The time was ripe for an association wherein the danger of competition as to any of the foregoing particulars would be reduced to a minimum" (*R., p. 1800-1*). This reasoning, with respect, overlooks the fact that the practices were the same during the ruinous price war and two more controlling facts:—

(*a*) The elements "entering into a quoted market price"—the charge and credit, or deposit, for bags, and discounts—have not been reported or disclosed or affected by the Association (*R., p. 166*); and

(*b*) Nothing whatever was reported or disclosed concerning the current business and sales at wholesale to dealers constituting 70 per cent. or more of the manufacturer's business and the portion thereof to which a manufacturer needing money or seeking to capture a dealer's custom, would naturally resort.

The same error of failing to note that the Association did not report the practices or departures therefrom, seems to invalidate the importance the Court attached to the similarity between the practices observed by a number of the defendant corporations "under the license agreement and those now generally prevailing in the industry".

The Court found that "under the present Association there is no method provided for disciplining and penalizing members for a departure from the foregoing practices" (*R., p. 1803*)—to which should be added "or finding out whether or not they are acting in accordance

with them". The Court also found "neither is there now any compact that cement shall not be sold below a specified price" (*R., p. 1803*). But it reasoned that the existence of the customary practices during the license and now, is significant.

Those granting licenses under the patent on the condition and limitation that the product should not be sold below a minimum price, simply took the common methods and mechanics of sale and price figuring as they found them and guarded against dodging the minimum price. Those methods were the same during cut-throat competition. It was the price limitation alone which constituted restraint.

9. The Error in the Opinion Below Concerning Keeping the Reports Confidential.

After the Association had commenced operating, it was found that some members were using the credit reports to make those reported feel offended with members reporting them and on that ground capture their custom (*R., p. 441*) and that the statistical reports and specific job contract reports were being taken by salesmen to those who had closed contracts with misleading arguments to induce them to transfer the business to the company whose salesman thus misused the reports (*R., pp. 555, 561*).

These misuses of the reports promised to make the continuance of the Association services impossible, because a manufacturer could not report an over-due account if a competitor was to use that to make the debtor feel offended and thus capture his business; or his commitments, if competitors were to take them to purchasers

(totally unqualified to understand them, as, for instance, to guess what part of the commitments were "duplications" or "padding"), with false arguments that the business should be transferred; or his contracts, if competitors were to use them as the basis of efforts to induce breaches.

Without any thought of secrecy (as evidenced by the fact that everything went regularly to the Trade Commission (*R., p. 162*), in the hope of stopping the unfair use of the reports, a letter was sent suggesting that each company confine the use of the reports within its own membership (*R., pp. 1128, 1008*). Even that did not operate to prevent salesmen pursuing the same unfair practices; and a letter was sent to the principal executive of each company, as distinguished from those attending the meetings, calling attention to the abuses and expressing the opinion that "this information should be used by executives to check up their operations and not given out to employees for such uses as they may choose to make of it" (*R., p. 1019*). Even that did not stop the unfair use of the reports, but no further action was taken.

When competitive activities are carried to such unfair extremes, it seems impossible to suggest that competition has been suppressed. The Court below overlooked these facts and attributed to the efforts to prevent unfair use by salesmen, theoretical considerations of inequality and unfairness for want of publication. Such considerations, we submit, have no application here:—

(*1*) The particular reports here did not comprise any information which could interest a dealer or purchaser

or affect his course. Unlike the reports in, for instance, the Linseed Oil case, the reports here contained no active or outstanding price or terms or discounts or market estimates or the like. Buyers here want only offerings.

(*2*) It was obviously a physical impossibility, or at least absurdity, to keep all dealers advised as to the facts concerning specific job contracts needed to detect duplications. If every report was not to be published, where should the line be drawn? If at information which might affect a dealer's course, then no report justified publication, because these reports did not contain matter which could affect any dealer's course.

(*3*) The matter is not of general public interest and any publication could be secured only by buying advertising space.

(*4*) No one had, or has, any objection to publishing the statistics of existing supply (*R., p. 338*).

(*5*) Publication does not seem matter of law under this statute, because this statute deals only with the surrender of independence to the collective will. Unfairness of any practice seems to belong under the Trade Commission Act of September 26, 1914, 38 Stat. 717.

Throughout the existence of Cement Manufacturers Protective Association, competition was unrestrained, undiminished and exceptionally vigorous.

This was proved by a large amount of direct evidence without anything to the contrary (*R., p. 308, p. 151, p. 174, p. 177, p. 178, p. 185, p. 189, p. 190, p. 192, p. 224, p. 1055, pp. 1056-68, pp. 1074-8, pp. 1080-2, pp. 1107-1122, pp. 1130-44, pp. 1430-1472, pp. 1477-1508, pp. 1649-1664, pp. 1783-1797*).

It was proved also by the following items:—

(1) The well-defined market price evidences the acuteness of the competition.

Where as here substantial uniformity of price exists without agreement (*supra, p. 50*), the competition must be acute and vigorous. That is the most desirable kind of price, because it means that everyone is getting the benefit of the low competitive price (*R., p. 296*).

The fact that Portland cement has advanced in price less than almost any other commodity (*D. 134, R., p. 1088; opinion below, R., p. 1808*) evidences the force of the competition.

(2) The losses on the incidents of the market price evidence the sharpness of the competition.

The market price which the purchaser pays is the price of the cement with some incidents, namely, (a) the charge and allowance, or deposit, for bags, (b) the trade discount or dealer differential, (c) the cash discount and (d) the freight.

It is impossible to disguise or avoid the sharpness of the competition in the price of the cement by varying the

items of bags or discounts, because the purchasers being professional buyers, would penetrate any such disguise and figure what the cement would cost them. The same causes which compelled a well-defined market price, necessarily operated on the items entering into that price (*R., p. 298*). The facts as to each, evidence in greater or less degree the power of the competition compelling results directly opposed to the desires of the manufacturers and inconsistent with collective control, as follows:—

(*a*) Bags are merely an instrument of delivery, taken back at the price advanced for them. Collective control would adjust the amount charged and allowed to the cost of the bags. Only the force of the competition can account for the large losses of the manufacturers in this item:—

1917,	Loss	$481,120.85
1918	"	640,659.13
1919	"	774,837.62
1920	"	2,157,952.64
1921	"	3,175,128.58
Total	"	$7,229,698.82

(*Ex. D-274, R., p. 1293*)

(*b*) The trade discount or dealer differential, while of less significance, has also gone against the manufacturer, the amount allowed the dealer being generally 5 cents a barrel prior to 1916, and then becoming generally 10 cents a barrel (*R., p. 320*).

(*c*) The cash discount has always been uniform in this, and generally in each, industry (*R., pp. 188, 189, 221, 222, 223, 656-60*). It is of little significance, but it also has been going against the manufacturers generally, from 1 cent a barrel to 2 cents a barrel to 5 cents a barrel

to 10 cents a barrel, for cash within ten days (*R., p. 317*).

And, as to the other incident of the market price, to all points freightwise nearer competitors' mills, the manufacturer has been forced by the competition to absorb, or deduct from the price he realizes; the amount of his freight disadvantage.

(3) Production by each defendant company during the six years showed complete independence of judgment and action.

With the figures in evidence, if any collective guidance, distribution, allotment, or pro rating, had existed, the Government's burden of proof could be discharged to a mathematical certainty. But the figures in fact demonstrate the complete absence of collective control of production with the same certainty:—

The figures are presented graphically in D-367 (*R., p. 1399*), showing the amount produced by each company each year from 1915 to 1921, by a black line extending up into the scale of millions of barrels, a distance equivalent to the actual production, the lines for each of the six years being placed side by side over the name of the manufacturer whose production each line represents, the figures being taken from Government's Exs. 373A and 374. Thus, Allentown in 1915 produced 864,000 barrels, dropped in 1916 to 808,000 barrels, in 1917 to 739,000 barrels, etc. (*Ex. 373A, R., p. 706*). Under any conceivable distribution or control, the skyline of each company in the chart D-367 would be the same as that of the others. The more carefully the chart D-367 is examined, the more plainly the diversity and individual independence in production appears:—

Disregarding the Governmental curtailment in 1918, the production of some of the defendant companies (e. g., Allentown, Glens Falls) has shown actual decrease each year throughout the six years; the production of others (e. g., Edison, Security) has shown increase each year throughout the six years; others (e. g., Pennsylvania, Penn-Allen) have produced approximately the same amount each year throughout the six years; others (e. g., Alpha, Lehigh) have been up one year, down the next, and so on, ending after six years below the production with which they started; and others (e. g., Atlas, Bath) have similarly varied from year to year, ending well above the production with which they started. These figures take no account of conditions in the market, which would, of course, emphasize the differences, because lower individual production in a year when business is generally good and higher individual production in a year when business is generally bad, emphasize the extent to which the individual courses depart from each other and the complete negation of any conceivable collective control.

Some continuous increases, some continuous decreases, some increases one year or two followed by decreases for a year or two with final gain, and some like variations with final loss,—cannot be reconciled with distribution on any imaginable basis. But to indicate the extent of the individual departures:—

The percentage of the total production, which each defendant manufacturer produced, is perhaps even more striking. Exhibits D-369 A to D-369 H (*R., p. 1405*), compare the proportion of the total production which each company produced in 1916 with its production during the succeeding years while the Association was in

existence. As compared with its proportion of the total production in 1916, Allentown decreased 10 per cent. in 1917, 39½ per cent. in 1918, 20 per cent. in 1919 and 33 8/10 per cent. in 1920. Alpha increased its percentage slightly in 1917 over 1916, but in 1918 fell off 9 per cent., and in 1919 fell off 20 per cent., and in 1921 fell off 4 per cent. Atlas increased 3.9 per cent. in 1917, increased 9.7 per cent. in 1918, increased 8.6 per cent. in 1919, and increased 11.2 per cent. in 1920. The figures of the other companies are similarly irreconcilable with any imaginable plan or joint control of production.

In the following table are brought together for convenience, the figures showing how much the actual business done by each company each year (shipments) fell below or exceeded the amount of business it would have done if the business had been allotted or pro rated according to relative capacity, the figures being taken from Government's Exhibits 382, 388 and Defendant's Exhibits D-370 A to E, and the testimony of Mr. Fernsler (*R., pp. 706, 1413, 275*). If the business had followed an allotment according to relative capacity, each figure would, of course, be a zero (*R., p. 275*). The figures are:

	1916	1917	1918	1919	1920
Allentown	+32.07	+18.3	—10.8	+15.5	— 2.5
Alpha	—13.9	—14.8	—23.4	—32.7	—12.1
Atlas	—10.4	— 8.2	—11.9	— 5.6	— 1.3
Bath	— 8.5	— 4.4	—10.3	+45.2	+73.0
Coplay	+16.7	— 6.9	— 1.1	—12.7	+ 1.0
Dexter	+32.0	+26.9	+46.5	+51.5	+28.8
Edison	—39.5	+ 4.4	+15.6	+26.8	+11.0
Giant	—30.0	—35.8	—35.4	—31.6	—39.4
Glens Falls	+38.5	+25.4	+60.2	+16.1	+17.1
Hercules	No capacity figures furnished Association				
Knickerbocker	—10.3	—29.3	— 3.6	—15.9	+ 5.9
Lawrence	+24.7	+31.6	+40.3	+27.5	+62.8
Lehigh	+19.6	+12.8	+14.3	+16.9	—19.3
Nazareth	+32.8	+19.6	+22.9	+ 1.6	+34.7
Penn-Allen	+50.0	+36.9	+31.5	+45.2	+33.3
Pennsylvania	+19.4	+27.4	+36.7	+24.4	+29.2
Phoenix	+11.3	+13.1	Closed	Closed	+29.9
Security	— 0.8	—12.5	+19.1	+18.7	+18.6
Vulcanite	+23.8	— 3.9	— 1.7	— 7.1	+ 5.9

Since the only question here is collective control, general production is less important than relative individual productions. But the activities of the defendant corporations to increase individual low-cost production and the consequent gradual ruin of high cost capacity, emphasize the rigor, not to say cruelty, of the competition between them.

Permanent low cost in cement (as distinguished from relatively fluctuating costs) results in some degree from improved machinery and equipment, in a few cases (Dexter, Nazareth and Pennsylvania, *R., pp. 309, 341, 343, 345*) from exceptional raw material, but chiefly from freight advantage to the markets.

The expenditures of these defendants individually to increase low cost capacity by the introduction of improvements in machinery and equipment, are continuous. 870,000 barrels increased capacity were thus added by the defendants in 1919 and 1920 (*R., pp. 236, 309. Ex. 387; R., p. 706*). The Hercules Company in 1917 commenced to operate a complete new plant in the Lehigh Valley (*R., p. 184*); the Phoenix Company after losing money each year (*infra, p. 132*) completely rebuilt its plant in 1918-19 (*R., p. 1310, Exs. 374, 375 A, 377, 382*); the Edison Company has rebuilt (*R., p. 277*); expenditures for improvements decreasing costs by others are constant (*R., pp. 3583, 3590*). Much of the earnings has been put back into improving the plants and appears in increased "invested capital."

But the most radical kind of permanent low cost is in acquiring freight advantage to markets. The Atlas Company, notwithstanding large surplus paper capacity in the Lehigh Valley, has constructed its large mill at

Hudson to get this advantage over the others (*R., p. 332*); the Alpha Company, with surplus paper high cost capacity in the Valley, has added its mill at Alsen (*D-275B, R., p. 1295*); the Lehigh Company, with surplus paper high cost capacity, has added its mill at Fordwick (*D-275M, R., p. 1306*). Such expenditures are totally inconsistent with collective control.

And the result is the gradual elimination of the high cost investments under the inexorable pressure of the competition, thus:

Only ten years ago the then twenty-seven eastern cement companies were invited to form the abortive Eastern Association (*Ex. 554, R., p. 778*). Of these twenty-seven, two, the Wayland and Northampton Companies, were just disappearing, through discontinuing business and bankruptcy at that time (*ib. 791*). Another, the American Company, went into bankruptcy (*R., p. 149*) and later was reorganized into the Giant Company. Five of the others have been financially reorganized, Knickerbocker, Nazareth and Phoenix in 1918, Allentown in 1919, and Edison in 1921 (*R., pp. 1252, 1255, 1258, 1242, 1248*). Three of the others, Cayuga Lake, Norfolk and Virginia, have been taken over by larger, stronger companies (*Exs. 373A, 374, 375A, 378, 379, R., p. 706*). Thus, in ten years the finances of eleven out of the twenty-seven have received attention of some unusual kind. And some of the defendants have lost money each year (*infra, p. 132*).

This individual increase of lower cost production, reflected in this history of ten years, has meant that particular mills have been unable to operate, although being owned by companies which have increased their low cost

production, they have not occasioned financial reorganization, and still stand with paper capacity. Thus, the Atlas Company constructed its mill at Hudson, although its paper capacity in the Lehigh Valley was then far in excess of any amount it has yet produced, even with its remarkable increases, both absolute and in its percentage of the total amount consumed (*Exs. 386, 387, 373 A, 374; R., p. 706, p. 332*). Such over-building to get lower costs and advantage over competitors, even at the cost of rendering some of one's own equipment practically obsolete, is striking proof of the vigor and rigor of the competition.

Two opposite abstract theories of production policy are mentioned in the record. Gen. Goethals (*R., p. 286*), Mr. Hurley (*R., p. 287*) and Mr. Morron in a speech at the annual dinner of the National Association in 1913 (*Ex. 516, R., p. 708*) expressed the opinion that sound business requires a producer to see a demand for his product before he makes it. Other defendant corporations, as Dexter, Pennsylvania and Nazareth, turn out every barrel their plants are capable of producing right through the year (*R., pp. 341-346*) and take their chances on selling it. Whichever course is followed, production is inevitably controlled by consumption, because unsold product necessarily stops over-production as effectually as foresight.

Production of the defendant corporations has in fact exceeded consumption to such an extent that at the end of each season, about 10 per cent. of the product (*Ex. 671-3, R., p. 963*), which can be stored and kept only at con-

siderable risk and expense, has been left on their hands. On December 31, 1918, the defendants had on hand 847,000 barrels of clinker and 3,175,000 barrels of ground cement (*Ex. 30, R., p. 366*); at the close of the next year, December 31, 1919, they had on hand 503,000 barrels of clinker and 2,066,000 barrels of cement (*Ex. 41, R., p. 366*); and at the close of the next year, December 31, 1920, they had left on hand 363,000 barrels of clinker and 2,496,000 barrels of cement (*Ex. 53, R., p. 366*).

The defendants have also left nothing undone to increase consumption and so production. Through the National Association, they spent large sums annually in educational work devoted to increasing the use of cement (*R., p. 196*), and in addition thereto their individual expenditures selling their product added together make a total in 1920 and 1921 greater than their total net income (*Exhs. D-269 H, D-269 I, R., p. 1233, D-271 H, D-271 I, R., p. 1261*). Such expenditures to increase consumption are as inconsistent with production collectively regulated to increase prices as is the general result of them, which the Government calls "the marvelous growth of the Portland cement industry in the United States", indicated by the figures in its bill showing that the production has increased from 401,900,643 barrels in 1901-1910 to 864,247,719 barrels in 1911-1920, although the latter period includes the time of the curtailment of building operations and production incident to the war.

(4) The expenditures in competitive sales efforts showed the vigor of the competition. It is apparent that if there were any control or distribution of business among the nineteen competitors, money devoted to attempting to

get business from each other would be thrown away. The demand is created mainly by the work of the National Association, and under any imaginable condition except competition, individual selling expenses would be small. But here we have exceedingly large selling expenses, constantly increasing, as folows:—

1913.....	$1,526,523.
1914.....	1,873,038.
1915.....	1,942,013.
1916.....	2,401,416.
1917.....	2,597,839.
1918.....	2,579,368.
1919.....	3,584,217.
1920.....	3,513,354.
1921.....	3,960,770.

(*Ex. D-369 A-I, R., p. 1233*)

(5) The sales and shipments showed independent and diverse individual judgments, and negative any collective control. In addition to his judgment concerning production, particularly in the slack season, the cement manufacturer is confronted by questions concerning his sales policy, which admit of and receive very different answers. These questions have to do with foreseeing future costs and prices. He must determine from time to time, whether it is advisable to tie up a large part of his production in contracts for future delivery at existing prices or avoid commitments in the expectation of higher costs and prices and when to reduce or advance his price; and his decision may mean loss if he takes too many contracts or inability to dispose of what he has produced if he takes too few or acts too slowly or quickly (*R., p. 335*). Wide diversity of judgment among the defendant companies is

reflected in the diverse profits considered later, and also in their sales or shipments:

Exhibits D-370 A to D-370 E, and Exhibits D-376 A to D-376 F (*R., pp. 1413, 1430*) show how widely the shipments of each company have varied with relation to its percentage of the total capacity (*R., p. 275*). The figures as to some of these shipments are in Exhibits 382, 388 and 390 (*R., p. 706*). They are substantially like the production figures already mentioned. They differ in some details, because shipments were reported both from mills in the territory and from mills outside the territory owned by defendant companies which shipped some cement from those mills into the territory, whereas the production figures were of the mills in the territory. And the inventories at the beginning and end would also be necessary to an accurate balance. The diversity cannot imaginably be reconciled with the operation of any single or collective mind. It plainly reflects the independent operation of widely diverse minds.

(6) The Price Received Per Barrel by the Different Companies Shows Independence and Competition.

The amount actually received per barrel by each company affords interesting evidence of the extent to which the competition and the absorption of freight affect the earnings of the companies (*R., p. 272; D-296-304, R., p. 1340*). Although the market price at a given time and place is substantially uniform, the prices actually received by the different companies vary widely. Thus, in the year 1916, the prices received range from .806 cents per barrel by Edison to $1.077 per barrel received by Security, a difference of 27.1 cents per barrel, with the

other companies ranging in between. In 1917, Pennsylvania realized the lowest price per barrel and Glens Falls the highest, the difference being 26.6 cents per barrel. In 1918, the prices differed 33.4 cents per barrel. In 1919, there was a difference of 29.6 cents per barrel. In 1920, Bath realized the highest price per barrel and Giant realized the lowest price, the difference being 48.4 cents per barrel. In 1921, the difference was 31.3 cents per barrel.

The average cost of, and price realized for, a barrel of cement by the defendant companies each year since the relinquishment of Government control, was:—

	Cost.	Price.
1919	$1.467	$1.637
1920	1.812	1.911
1921	1.625	1.711

(*D-279, R., p. 1333*)

(7) The Earnings and Profits Show Sharp Competition.

The investments of the nineteen defendant corporations are separate and independent. Any agreement or collective control which would command their unanimous assent, would have to be one which yielded more than unrestrained competition. The Government appreciating this, in the petition charges the defendants with having made "enormous profits".

(*1*) There are three ways of determining the capital employed: (*i*) The "invested capital" defined by the Federal tax laws and regulations, is a more or less artificial figure, having to do with what was in fact put in, in certain forms, without regard to actual present value. (*ii*)

The replacement value (to which attention is given, for instance, in matters relating to reasonable returns on public utilities) has to do with what it would cost to replace the physical properties. (*iii*) The book value is the value as determined from the company's books.

Here the total "invested capital", as reported to the Government, of $76,735,339. (*D-271, A-I, R., p. 1261*) would be $151,622,256.09, if the replacement value was taken (*D-455, R., p. 1472*) or $102,613,760. book value (*R., p. 3084*) for the year 1920. Since it goes back to original investment, regardless of value (*R., p. 275*), and is here so much below the other ways of ascertaining capital investment, it is not particularly fair to these defendants to use "invested capital" in determining their profits. But we confine the figures here to those based on "invested capital."

(*2*) Taking first the nineteen companies collectively, the profits on invested capital have been:—

1913	4.8 per cent.	
1914	5.3 " "	
1915	1 " "	
1916	6.3 " "	
1917	3.8 " "	
1918	2.9 " "	
1919	6.7 " "	
1920	4 " "	
1921	3.2 " "	(*R., p. 1393, D-353*).

These are the earnings before any dividends. Such dividends as there were, had to come out of the profits thus shown or profits of years before 1913 not then distributed as dividends, but put back in the business and carried as surplus.

Industrial corporations in normal years—not in particularly good years—earned on the average at least 12 per cent. and even National Banks for 45 years have earned on an average 8.6 per cent. (*R., p. 300*).

These defendant corporations earned 4.2 per cent. on their "invested capital"—much less than, about a third of, what is normally earned by industrial corporations and about half as much as National Banks.

That cannot conceivably be explained by any collective control to make "enormous profits" out of the public by restraining trade. But the obvious fact that there are an unusual number of well-equipped competitors engaged in exceptionally keen competition, makes the meager profits understandable.

The figure 1 per cent. in 1915 reflects the trade war of that year. 1916 was one of the best years in the history of the world, from the standpoint of profit and business generally—the net income of the corporations in the country, as reported for Federal taxation, increasing from something over five billion dollars in 1915 to considerably over eight billion dollars in 1916 (*R., p. 301*). These manufacturers who made 5.3 per cent. in 1914, a bad year (*R., p. 301*), made 6.3 per cent. in 1916. But during the later recent years when others have been averaging in the neighborhood of 14 per cent. after the Federal taxes are deducted, this portion of this industry has earned 3.48 per cent., except in the year 1919, when the war had operated to eliminate old contracts at low figures and make all business fresh business. Then with a building boom, they earned 6.7 per cent., almost half as much as made by the average industrial corporation (*R., p. 301*).

Excepting the slight increases in the two boom years in cement (1916 and 1919) and the decrease in the year of cut-throat competition (1915), the defendant companies have made smaller profits each year since Cement Manufacturers Protective Association was organized (1917, 1918, 1920, 1921) than they made before (1913, 1914).

(*3*) And the profits of the different companies have varied as far as conceivable from any thing suggesting distribution. A few companies who have combined comparatively low costs with foresight or good fortune in making their sales when prices were at the highest point during the season, as distinguished from selling their production under contracts when prices were at a lower point, etc., have made good profits on their investment. Some whose costs have been higher and judgments less well verified by developments, have lost money. Most have made exceptionally low profits. Thus, the operations of the following companies show actual losses in the years set after their names.

Allentown, 1915, 1917, 1918, 1921 (*D-334*)

Atlas, 1915 (*D-336*)

Coplay, 1918, 1919, 1921 (*D-338*)

Edison, 1915, 1916, 1917, 1918, 1919, 1920, 1921 (*D-340*)

Hercules, 1918, 1920, 1921 (*D-343*)

Knickerbocker, 1915 (*D-344*)

Nazareth, 1913, 1915 (*D-347*)

Penn-Allen, 1915 (*D-348*)

Phoenix, 1913, 1914, 1915, 1916, 1917, 1918, 1919 (*D-350*).

Vulcanite, 1921 (*D-352*).

The same year, when Coplay and Edison and Phoenix lost money, 1919, Dexter made 23.9 per cent. on its in-

vested capital. Similar differences appear between the earnings of the different companies in every year *(D-334-D-352, R., pp. 1374-1392)*. There is no conceivable kind of agreement or thing to which these companies would all assent, that would produce such results. And, of course, the figures of loss or profits are more diverse than the percentages of invested capital, by reason of the different sizes of the businesses.

In the following table is shown, from Exs. D-334 to D-352, the percentage of profit or loss to "invested capital" as reported to the Government, the losses being indicated by black figures:

Company	1913	1914	1915	1916	1917	1918	1919	1920	1921
Allentown	3.1	9.5	**.6**	5.1	**1.9**	**8.7**	5.2	1.5	**4.8**
Alpha	8.4	8.5	4.5	5.9	4.0	3.2	6.2	8.1	1.9
Atlas	5.0	3.7	**1.8**	7.2	8.8	6.7	8.3	2.7	7.4
Bath	20.7	4.3	3.5	9.0	3.5	2.6	10.7	10.6	1.7
Coplay	5.9	4.5	3.7	7.9	.8	**2.0**	**.1**	.1	**1.6**
Dexter	15.3	12.2	1.9	17.8	21.1	9.7	23.9	11.5	19.2
Edison	**.8**	.1	**1.3**	**.8**	**3.8**	**8.3**	**8.6**	**12.4**	**.8**
Giant		.4	.2	2.2	1.5	1.1	8.8	5.5	1.4
Glens Falls.....	13.0	11.9	4.9	10.1	15.2	11.0	16.0	3.9	14.1
Hercules						**2.0**	3.6	**1.5**	**3.4**
Knickerbocker ..	2.4	7.4	**7.1**	8.3	5.6	5.9	5.5	5.0	.8
Lawrence	6.4	9.5	5.8	10.0	6.3	7.7	12.1	6.4	2.4
Lehigh	9.8	10.9	4.8	12.8	4.8	2.9	9.2	4.2	3.5
Nazareth	**5.5**	2.8	**5.4**	9.5	7.6	8.2	11.5	15.3	3.0
Penn Allen ...	27.1	14.3	**1.4**	24.2	5.7	6.1	10.1	9.8	9.6
Pennsylvania ..	6.9	11.8	6.6	3.4	9.7	9.6	14.3	15.2	3.3
Phoenix	**3.3**	**4.1**	**20.8**	**17.1**	**12.3**	**7.0**	**.8**	16.5	15.2
Security	1.8	3.1	4.7	12.3	12.1	6.5	16.2	11.1	7.6
Vulcanite	8.2	6.8	.4	3.9	5.0	2.8	7.8	2.3	**4.4**

When nineteen independent manufacturers with a combined "invested capital" of more than $75,000,000, working nine years, average only 4.2 per cent. on that small measure of their investment, less than they would have received, without effort, if their money was in Liberty bonds, charges of "enormous profits" seem—like the other charges against them.

THE LAW.

1. Cooperation among those engaged in a particular industry or calling is a common law right not prohibited but impliedly endorsed by the statute, except when "in restraint of trade or commerce among the several States or with foreign nations."

In *Attorney-General of Australia* v. *Adelaide SS. Co., 1913 A. C. 781,* the common law was summarized as follows:

> "At common law every member of the community is entitled to carry on any trade or business he chooses and in such manner as he thinks most desirable in his own interests" (*p. 793*).
>
> "The right of the individual to carry on his trade or business in the manner he considers best in his own interests involves the right of combining with others in a common course of action, provided such common course of action is undertaken with a single view to the interests of the combining parties and not with a view to injure others.

The statute does not take away the right of combining with others in a common course of action, except where that action constitutes one specified injury to the public. Both the wording and meaning of the statute are precisely as if it had contained an express clause, "But no contract, combination, or conspiracy not in restraint of trade or commerce is hereby declared illegal". Co-operation or combination, with wholesome, helpful

purposes and results, is impliedly continued as commendable by the statute.

In *Anderson* v. *U. S., 171 U. S. 374,* this Court upheld the propriety of a combination among live stock dealers, saying,

> "From very early times it has been the custom for men engaged in the occupation of buying and selling articles of a similar nature at any particular place to associate themselves together. The object of the association has in many cases been to provide for the ready transaction of the business of the associates by obtaining a general headquarters for its conduct, and thus ensure a quick and certain market for the sale or purchase of the article dealt in. Another purpose has been to provide a standard of business integrity among the members by adopting rules for just and fair dealing among them."

In *Gompers* v. *Bucks Stove & Range Co., 221 U. S. 431,* the Court said:

> "Society itself is an organization and does not object to organizations for social, religious, business and all legal purposes."

Any question of restricting the freedom of traders to cooperate through trade associations because the potentiality of such cooperation in the direction of restraint may be thought to outweigh the potentiality in making industry more honest and efficient and affording those best qualified some opportunity to experiment towards the relief of the widespread distresses of industrial civilization—belongs to the legislature and not to the Court.

The general tendencies of trade associations—as distinguished from the concrete overt acts in the particular case—bear only the same relation to the Act of July 2, 1890 that considerations affecting the desirability of the possession of weapons bear to a statute prohibiting the crime of murder or assault. General tendencies of unforbidden acts are for the legislature. This statute forbids only the full crime of restraint of trade.

In *United States* v. *U. S. Steel Corporation, 251 U. S. 417,* this Court rejected the view that the statute forbids everything which may be regarded as "a menace to the public interest and illegal because there is potency in it for mischief" (*251 U. S. 450*), saying:—

> "But we must adhere to the law and the law does not make mere size an offense or the existence of unexerted power an offense. It, we repeat, requires overt acts and trusts to its prohibition of them and its power to repress or punish them" (*251 U. S. 451*).

2. Protective Activities relating to Credits and Specific Job Contracts are lawful.

In *Swift & Co.* v. *United States, 196 U. S. 375, 395,* this Court approved a decree which provided that defendants should not be restrained

> "* * * from establishing and maintaining rules for the giving of credit to dealers where such rules in good faith are calculated solely to protect the defendants against dishonest or irresponsible dealers."

In *Anderson* v. *U. S., 171 U. S. 604, 616,* the Court said with respect to the legitimate functions of associations:

> "Another purpose has been to provide a standard of business integrity among the members by adopting rules for just and fair dealing among them and enforcing the same by penalties for their violation."

In *Virtue* v. *Creamery Package Co., 227 U. S. 8, 37,* the Court in dismissing a case where a provision for the assertion of patent rights was attacked under this statute:

> "The contracts we have shown were legal conveyances of rights, and the provision for the prosecution of infringement suits was but an assurance of those rights."

In *Reynolds* v. *Plumbers Protective Association, 30 Misc. 709* (motion for new trial denied, *63 App. Div. 650;* appeal dismissed *169 N. Y. 614)* the Court said:

> "It must be conceded that the extraordinary development and growth of commercial enterprise and trade within the past few years and the distribution of our vast products of industry in every part of the world, has made it necessary for merchants and business men to organize for the protection of each other in their business against irresponsible parties."

In *U. S.* vs. *Whiting, 212 Fed. 466, 476,* the Court said:

> "Considering on the one hand, the situation of the parties to the agreement, the possibilities of loss to them which unrestricted competition involved, and their right to protect themselves fairly against it, and, on the other hand, the public needs and the advantages to the public from unrestricted competition, it must appear that the de-

fendants have done more than was fairly justified by reasonable self protection."

3. The Enjoined Statistical Activities are lawful.

In view of the enormous amount of discussion of this subject, with the trend of which the Court is familiar, we merely state our submissions as to the law very simply:—

The breadth and permanence of the principles fixed in the statute, preclude any application of it on the basis of whether the kind of agreement questioned, existed before the date of the enactment. "Trade associations have been collecting production statistics of one kind or another, with increasing momentum, for over sixty years" (*Trade Association Activities, Department of Commerce, Government Printing Office, 1923, p. 12; R. p. 307*). And the fact that a particular kind of agreement was unknown when the statute was enacted would not evidence illegality (*Federal Trade Commission* v. *Sinclair Refining Co., 261 U. S. 463, 476*).

The occasion and purpose of the statute have been succinctly stated thus:

> "The entrance of the Government began strongly three decades ago, when our industrial organization began to move powerfully in the direction of consolidation of enterprise. We found in the course of this development that equality of opportunity and its corollary, individual initiative, was being throttled by the concentration of control of industry and service, and thus an economic domination of groups builded over the nation. * * * Our legislation against restraint

of trade is the monument to our intent to preserve an equality of opportunity" (*American Individualism, by Herbert Hoover, Doubleday, Page & Co., 1923, p. 52-3*).

"Concentration of control" was the industrial development at which the statute was aimed. Its common form was the actual turning over of the control of an industry to a single direction—"consolidation of enterprise," "combination in the form of trust or otherwise" (*26 Stat. 209*). Whatever its form, it consisted essentially in the substitution of a single control for independent controls in matters (such as price or production) which affect the public interest and are essential weapons in the "conflict for advantage called competition" (*262 U. S. 388*).

As applied to cooperation of competitors whose selfish interests remain independent and conflicting, collective control cannot exist unless the collective will in such matters is formulated, expressed and made to prevail over the selfish, independent will of the individual.

The acts of any trader or human being must, in the nature of things, conform either to some external standard formulated by, or with the assistance of, some one other than himself, or to his own independent internal thoughts, judgment and will. In order that his acts may conform to some external standard, it is obviously necessary that that standard exist and be known to him. Otherwise the individual must necessarily be guided by his own independent judgment and will.

In the Association at bar, and among these defendants, there has been no attempt whatever to substitute concentration of control for individual freedom. There

has been no thought of attempting to formulate any collective will, to say nothing of making it prevail over the independent judgment and will of the individual.

When all the activities here had functioned to the utmost and the manufacturer turned to the inevitable questions, How much shall I charge for my cement? How much shall I produce? he could find no possible answer except, Whatever you want to and can in the exercise of your own free and undirected judgment and will. His prices and production were in no way guided by any expression or intimation of a collective will. He was as free and independent as if the Association had not existed.

The essential of restraint of trade to which we have referred, has been conspicuously present in the activities of the associations heretofore before this Court. We do not here seek to justify associations with enterprising managers employed to speak the collective will and tell the members what to do with respect to prices and production, or holding meetings where the members discuss future prices and production in such a way as in fact to formulate the collective judgment and will and substitute it for the independent judgment and will of the individual, or collectively determine a standard of price, denominated by some other name, as average cost or what-not, or the like. Such activities may (or may not according to the facts) amount to substantially the same concentration of control as was involved in turning over the individual businesses, or their direction, to a collective control "in the form of trust or otherwise" (*26 Stat. 209*).

That—not the association, but the restraint—is what the statute forbids. It does not forbid information

or knowledge, however accurate or extensive, or say that traders may have or obtain only such portions thereof as some governmental bureau may deem it proper to collect and release.

Here there is no incident or instrument of collective control or restraint. The collective will was never conceived, never came into existence and could not be expressed. Each defendant conducted his own business without collective guidance and with the utmost diversity of individual judgment.

The universal recognition of the essential importance of statistical facts by the business men of the country and the departments of the Government which come in contact with business, and the efforts of both to supply the necessary facts, cannot be attributed to any desire to restrain trade. The great bulk of business men, and these defendants, do not seek to be relieved from competition and are unwilling to surrender their opportunities to advance their own interests at the expense of their competitors. But they do seek to be relieved from ignorance—to make intelligence, clean work, efficiency and ability count—to make the game less a game of guess and gamble and more a game in which the best man wins because he is the best man.

Knowledge does not restrain trade. Ignorance tends to restrain it because of the fear of the unknown and the misguidance through "contagious optimism or equally contagious pessimism" which misleads to ruin, unemployment and misery.

It is obvious that the greater the skill and efficiency of those engaged in an industry, the greater the benefit

which will result from their competition. Blundering management, which increases costs, is not more beneficent than poor equipment or unimproved processes. The extension of the law which the Government seeks here, would amount, in substance, to insuring higher costs and depriving the public of its right to a competition of intelligent skill and informed ability.

The law, we submit, has nothing to do with prescribing how much knowledge or information those engaged in competition shall have. The sovereign here has, in other connections, undertaken to supply the information necessary to some degree of efficiency and spends millions of dollars annually to provide it. In so far as it has indicated any judgment in the premises, it has thus shown its recognition of the fact that the more information those engaged in industry have, the better. But that is a field which this statute does not touch. It leaves that to the common law right of traders to do as they please as long as they preserve their individual, independent interests, judgments and wills.

4. The provisions of the decree enjoining agreement on methods of sale, existing trade practices, etc., were unwarranted by any proof and erroneous.

These portions of the decree may be dealt with shortly without entering upon the questions of how far an industry may regulate its practices, presented by some of them and presumably of much importance in some other fields of industry. All these provisions of the decree were unwarranted because there was no evidence (or even proper pleading) upon which to adjudicate them:—

(*1*) The largest group is comprised in paragraph 9 of the decree, specifying fourteen trade practices *(R., pp. 1811-2)*. The injunction is not against carrying out an agreement, but only against "hereafter agreeing". There was no evidence that any such agreement had been made or contemplated. The Court did not find any such agreement. On the contrary, it found "very probably there is no agreement now in force by which such practice is to be followed" (*R., p. 1802*). "Under the present association there is no method provided for disciplining and penalizing members for a departure from the foregoing practices * * *. Neither is there now any compact that cement shall not be sold below a specified price" (*R., p. 1803*).

(*2*) The provisions of paragraph 5 of the decree are against agreeing to cancel specific job contracts which are "duplications", or the "padding" therein (*R., p. 1810*). There was no evidence of any such agreement. On the contrary, the Court expressly found that

there was no such agreement, saying:— "Of course if a company wished to recognize an agreement made with a contractor or person who had expected to supply cement to a specific job and who did not get the work but was willing to take the cement notwithstanding, it might do so" (*R., p. 1805*).

(*3*) Paragraph 7 of the decree prohibits agreement to publish freight rate books giving rates "from any arbitrarily established freight basing point", but permits collective publication of "the actual rates between points of actual shipment and delivery" (*R., p. 1811*). Here again there was no evidence of "any arbitrarily established freight basing point". On the contrary, the Court found, "The freight rate books standing alone, and in so far as they merely record a compilation of lawful freight rates, are harmless. Their vice, if such it be, resides in the fact" that, in substance, they were used to quote delivered prices (*R., p. 1802*).

(*4*) The remaining provision, paragraph 8 of the decree, prohibits agreement as to giving credit (*R., p. 1802*). There is no suggestion in pleading, evidence or opinion that such agreement existed or was contemplated.

The discussion of the limited collective activities here, tends to misplace them. Their chief importance to these defendants results from the pending criminal cases based on them. But the principles involved seem of importance to all industry.

Where, as here, we find an exceptionally large number of well-equipped competitors, each of whom has preserved its selfish interest and investment wholly independent of all the others, and newcomers, like the defendant Hercules, freely entering the field, there are the strongest reasons for recognizing that, in the words of this Court:

> "The natural evolutions of a complex society are to be touched only with a very cautious hand" (*Board of Trade* vs. *Christie, 198 U. S. 239, 247-8*).

More recently the Court said:—

> "The great purpose * * * was to advance the public interest by securing fair opportunity for the play of the contending forces ordinarily engendered by an honest desire for gain. And to this end it is essential that those who adventure their time, skill and capital should have large freedom of action in the conduct of their own affairs". (*Federal Trade Commission* v. *Sinclair Refining Co., 261 U. S. 457, 463, 476*).

Since the introduction and increased use of machinery has done away with geographical limitations and created large units of production, the life and happiness of the individual no longer depend simply on what occurs within his neighborhood, but upon the intelligence

and efficiency with which large industries producing most of his food, clothing and shelter, and producing also directly or indirectly his means of procuring them, are conducted. The problems of this industrial era are of enormous importance and largely unsolved. Efforts towards their solution, cooperative or otherwise, by increasing the intelligence, honesty and efficiency of any industry, or preventing economic waste, are to be encouraged as representing helpful and hopeful embodiments of that common law right of traders, and others, to do as they choose, upon the exercise of which the solution must depend.

If, when all the cooperation in a particular industry has functioned, there is no collective control but each competitor continues to retain his own independent interest and investment and preserves his own independent will and judgment as to his own future production, sales and prices, there is no restraint of trade.

To the extent that these defendants have cooperated to make their industry more honest and more efficient, while preserving unimpaired the complete independence of investment and conduct of each, their efforts seem helpful, hopeful and commendable. But it is enough that they do not offend the statute or any other law.

The decision below should be reversed and the cause remanded with instructions to dismiss the petition.

Respectfully submitted,

John W. Davis,
George T. Buckingham,
Archibald Cox,
Counsel for Appellants.

OCTOBER TERM, 1924.

CEMENT MANUFACTURERS PROTECTIVE Association, The Atlas Portland Cement Company, The Allentown Portland Cement Company et al, Appellants, *v.* THE UNITED STATES OF AMERICA.	No. 551.

BRIEF AND ARGUMENT ON BEHALF OF THE GOVERNMENT.

STATEMENT OF THE CASE

The original petition was filed June 30, 1921, against the Cement Manufacturers Protective Association, a voluntary association, and nineteen corporations engaged in the manufacture of cement, which constitute the membership of said association. (Vol. I, p. 1.) The petition alleged a violation of the Antitrust Law of July 2, 1890; but it is unnecessary to here repeat its allegations (Vol. I, pp. 1–20), as it is not questioned that they state a case and

[NOTE: All italics are ours, unless otherwise stated. When the name of an individual is used, there generally will be given in parentheses the name of the company he represented. In quoting, this is our addition.]

cover all the activities proven. The answer of the defendants (the terms plaintiff and defendants will be used as in the court below) elaborately discusses, and either admits or denies, every allegation of the petition. (Vol. I, pp. 20–125.)

About the same time this petition was filed, an indictment was returned against the defendants by a grand jury sitting in the Southern District of New York. The trial of the criminal case began April 4, 1922, and lasted until May 26, and resulted in a mistrial. On December 15, 1922, it was stipulated that District Judge Knox, who presided at the trial of the criminal case, might determine the civil case upon the record made on that trial. (Vol. I, p. 144.) After argument in February, 1923, the court on October 23, 1923, handed down an opinion (Vol. III, pp. 1797 to 1809), in which he held for reasons stated that the allegations of the Government's petition were sustained by the proof and that "the Government may have the decree for which it asks." A final decree was entered on December 13, 1923. (Vol. III, pp. 1809–1813.) Errors were assigned by defendants, and an appeal was prosecuted to this court.

BRIEF AND ARGUMENT

I

THE MANUFACTURE AND SALE OF CEMENT

THE MANUFACTURE OF CEMENT.

In order to fully understand some of the objects of the practices engaged in by defendants, it is necessary to know something about the manufacture and nature of cement, and the manner in which it is handled.

Holger Struckmann, construction engineer and witness for the defendants, explained in some detail the nature of cement and the processes of its manufacture. The raw materials from which cement is manufactured are limestone and shale, or limestone and clay, which in some localities are properly mixed by nature. Through a number of processes particularly described this material is mixed, dried and crushed until it is reduced to a fineness which permits 98% to pass through a sieve with 10,000 meshes per square inch. It is then placed in silos or bins, and taken therefrom under the supervision of the chemist and fed into a long kiln, one end of which is elevated above the other. In the lower end of this kiln the fuel is injected and ignited, and as the cylinder revolves the material travels from the upper to the lower end. The temperature at the upper end is approximately 1000° Fahrenheit; it gradually increases until it reaches a temperature of

2500° to 2800°, when the chemical combination of lime, aluminum, silica and iron is formed; and the finished clinker is discharged from the kiln as a white-hot slag or lava.

The last stage of the process is the grinding of the clinker, which is done after it has gone through a seasoning process, necessary to eliminate all uncombined lime. The finished product is then delivered into packing bins by machinery. (Vol I, pp. 265–267.)

It will hereafter be observed in examining the reports of stocks on hand and production that there is as much attention given to clinker as to cement; and to understand the relevancy of the reports it is important to keep in mind the distinction between the clinker and cement. As said by Mr. Elliot: "Clinker is not subject to deterioration when exposed to the weather" (Vol. I, p. 145), while cement, the finished product, will rapidly deteriorate when exposed. Mr. Morron, president of the Atlas Company, said: "To a great extent clinker is nonperishable, while cement is perishable." (Vol. I, p. 338.) The final process of converting clinker into cement is quickly performed; and therefore in order to understand the exact condition of a competitor as to its stocks on hand and its ability to meet orders, it is probably more important that the amount of clinker be reported than the amount of cement, as the cement can not be kept in storage except for a limited period of time.

THE SALE OF CEMENT.

The cement manufacturers maintain sales forces, which consist of sales managers and a number of sales agents, and the cement is distributed both through dealers and directly to contractors. A very large per cent is sold to dealers, and is retailed by them in small lots. A considerable quantity is sold to contractors through dealers, and the remainder is sold directly to contractors, or to public utilities engaged in construction work. (Elliot, Vol. I, p. 145.) Mr. Morron testified with reference to the business of the Atlas Company, which is the largest manufacturer of cement in the world, that about 60 or 65% of its business goes to dealers who sell it out in wagon-load lots; that 25 to 30% passes through dealers to contractors, while the remainder is sold *directly* to large consumers. (Vol. I, p. 330.)

The cement used by contractors is bought either directly from the manufacturer, or through the dealer, on what is known as specific job contracts. This contract always contains the provision *that the cement sold is to be used only upon the job described.* This specific job contract is one of the very important features of this litigation. If the cement be obtained by the contractor through a dealer, the contract is made between the manufacturer and the dealer; and there seems to be a diversity of custom as to whether an agreement to the same effect is made between the dealer and the contractor.

33562—25——2

II

ORGANIZATIONS OF MANUFACTURERS OF CEMENT

THE PORTLAND CEMENT ASSOCIATION.

The Portland Cement Association is commonly known and will be hereinafter referred to as the National Association. In a letter of August 30, 1920, addressed by Mr. Kinney, General Manager, to Mr. Naylor, President of the Knickerbocker Portland Cement Company, it was stated that on September 11, 1902, the first meeting of Portland cement manufacturers was held at Sherry's in New York City, which meeting was the forerunner of many similar meetings that resulted in the formation of the Portland Cement Association; and a photographic copy of the call of the first meeting was inclosed for Mr. Naylor to frame and hang in his office, if he so desired. (Vol. II, p. 669.) That first call reads as follows:

> The undersigned, manufacturers of Portland Cement, recognizing the fact that the present methods of handling the subject of "sacks" are almost universally unsatisfactory, and believing that the question can be profitably discussed and a satisfactory plan evolved at a meeting of the representatives of the Eastern Mills, hereby pledge themselves to attend such a meeting to be held at such time and place as may be most convenient to a majority of those signing.

It was signed by twenty-two manufacturers, eleven of whom are defendants in this case. (Vol.

II, p. 668, side p. 1363½.) The offices of the association were in the Bellevue Court Building, Philadelphia, until 1916, when it was re-organized and its offices removed to the Conway Building, Chicago. (Vol. II, p. 668, side p. 1363.) The date of this reorganization and removal of the offices of the national association, to wit, 1916, should be kept in mind, as in that same year the defendant Cement Manufacturers Protective Association was organized.

The present secretary of the association, Mr. Kinney, was placed upon the witness stand by the Government; and by him it was proven that all of the defendant manufacturers are members of the national association except the Lawrence Cement Company, which was elected a member September 11, 1902, but resigned in 1911. (Vol. I, pp. 194–195.) He filed as exhibits three pamphlets, one published in 1915, another in 1916, and a third in 1919, which set forth the trade practices prepared and recommended by a committee of the National Association (p. 195). Mr. Kinney also stated that about the only reports made to the association at the present time are connected with the accident prevention and insurance work and with the conservation bureau; *but that the members had reported the amount of production and shipments of cement until shortly after the decision of this court in the Hardwood Lumber Case in January, 1922.* (Vol. I, p. 195.) On cross examination, without objection on the part of the Government, Mr. Kinney

testified very fully as to the activities of the National Association.

He said that the association has about 320 employees, with branch offices in twenty-three cities, and a membership including companies in South America, Mexico and Canada. One of its principal activities is the promotion and inspection of concrete roads. It advises highway officials, city engineers and others as to how best to construct roads. It maintains an extensive laboratory in Chicago, where it has developed the best uses of cement. It has a farm and cement products bureau devoted to the development of the uses of cement and concrete on farms. It has a structural bureau that works with architects and engineers in the development of new and better uses for cement. Its advertising department spends usually $200,000 a year. It also has an accident prevention department, which looks after the guarding of machinery in plants, etc. It has a conservation bureau in which a study is made of ways and means to avoid waste of heat in burning, waste of dust, etc., and at one time it had a uniform cost accounting bureau. It has about two hundred engineers engaged in field work. There were filed as exhibits to his evidence many leaflets or bulletins which treat of pratically every question touching the uses of cement. He said they had expended in laboratory research work since January 1, 1918, $218,819.65; in the last four years they had expended for advertising $544,425.14, and on the

highway bureau in the same time $154,459.09. In fact, the income of the association for the previous year was $1,750,000, the amount contributed by each member being 8 mills per barrel on the production of the second preceding year. (Vol. I, pp. 196–204.)

Mr. Kinney's testimony conclusively shows that practically every activity that can conceivably be of legitimate benefit to the industry was being engaged in by the so-called National Association at the very time the defendant Cement Manufacturers Protective Association was organized, and that its activities have continued down to the present time; and that, therefore, there was left no legitimate excuse for the organization of a subordinate association to promote the welfare of the industry and to protect those engaged therein.

ORGANIZATION OF SECTIONAL ASSOCIATIONS.

As will hereinafter appear, the defendant Cement Manufacturers Protective Association was organized in 1916, the same year the national association was re-organized and its offices moved to Chicago. From the allegations of the petition (Vol I, p. 6) and the admissions of the answer (p. 47) it appears that the following organizations or agencies were formed about the same time, and subsequently:

(1) The Mid-West Cement Credit & Statistical Bureau, with headquarters at Chicago, organized by the cement manufacturers in the middle

West in 1917, substantially along the lines of the defendant association.

(2) The Southern Audit & Statistical Bureau, with headquarters at Dallas, Texas, a name under which an individual carried on the business of collecting and exchanging information for the cement manufacturers in that section of the country.

(3) The Norcross Audit and Statistical Bureau, with headquarters at Kansas City, Missouri, being a bureau of the same character and conducted by the same individual as the Southern Audit and Statistical Bureau.

(4) The Southern Statistical Bureau, with headquarters at Atlanta, Georgia, organized in 1918, its activities being in substance, but not in form, more like those of the defendant Cement Manufacturers Protective Association.

None of these associations and bureaus has any connection with the so-called National Association. In other words, while the National Association is composed of nearly all the cement manufacturers in the United States (See Gov. Ex. 242, p. 664, side p. 1296, Vol. II), the manufacturers located in the several sections of the country have organized local associations for particular purposes which act independently of the National Association; but as to some matters, as will hereinafter appear, they adopt recommendations made by the National Association.

III

HISTORY OF EVENTS LEADING UP TO ORGANIZATION OF DEFENDANT CEMENT MANUFACTURERS PROTECTIVE ASSOCIATION

Acting independently of the National Association, the group of manufacturers located in the northeastern part of the United States and extending into Virginia have from time to time formed combinations and schemes clearly for the purpose of controlling the production and prices of cement produced in that section of the country.

Association of Licensed Cement Manufacturers

The first of these combinations was known as the Association of Licensed Cement Manufacturers. From the stipulation filed as Gov. Ex. 544, Vol. II, pp. 725–727, it appears that Hurry and Seaman, employees of the Atlas Company, obtained patent, No. 645031, on March 6, 1900, for the burning of powdered coal in the production of clinker, the use of coal being thereby substituted for oil, which it was claimed effected a saving in the cost of manufacture. The validity of this patent was contested; and after the case was argued and before the decision was handed down, a settlement was effected between the parties and other cement companies who were using substantially the same apparatus. Pursuant to this settlement, on November 23, 1906, the North American Portland Cement Company was incorporated, its capital stock being subscribed by

the Atlas, Lehigh, Alpha, American, Vulcanite and Lawrence companies, all of which are defendants herein, except the American Company. By contract of December 3, 1906, the Atlas Company granted to the North American Company an exclusive license with power to sublicense the use of the inventions covered by the Hurry and Seaman patent, retaining itself the right to manufacture. And at the same time the North American Company granted to the Lehigh, Alpha, American, Vulcanite and Lawrence companies licenses to use said inventions; and afterwards several other manufacturers were granted similar licenses. *On December 30, 1907,* the Association of Licensed Cement Manufacturers was formed, which was composed of the licensees of the North American Company. In the meantime, on April 16, 1907, the United States Circuit Court of Appeals handed down its opinions in the Rubber Tire Company case, 154 Fed. 358, and in the Case Threshing Machine Company case, 154 Fed. 365, which opinions had been communicated by counsel to the organizers of the association. Subsequently, said court of appeals rendered a decision of like character in the Goshen Rubber Works case, 166 Fed. 431. On January 13, 1909, a supplemental license was executed by all the companies except the Northampton Company, which had gone into bankruptcy, they being advised by counsel that the license was in exact accordance with the decisions of the Circuit Court of Appeals for the Seventh Circuit. *In January, 1911,* the Association of Licensed

Cement Manufacturers was dissolved; and in 1912 the Court of Appeals for the Seventh Circuit held that unless the broad claims of the Hurry and Seaman patent were limited to the particular means for burning coal they were void because too broad, and consequently that there was no infringement. (196 Fed. 385.) Copies of the license agreement and of the articles of association were filed as Gov. Exhibits 545–550. (Vol. II, pp. 727–776.) The agreement entered into on January 13, 1909, between the North American Company and the several licensees, the number of whom was sixteen, all but four of whom are defendants to this suit, clearly indicates the purpose of that organization. (Vol. II, pp. 756–776.) This agreement is quite lengthy, and covers every phase of the entire industry. Special attention is called to some of the provisions contained therein. It was provided that during the existence of the agreement each licensee should enjoy the non-exclusive right and license to manufacture under the inventions mentioned, subject to the terms, conditions and covenants expressed in its license, but only within the limitations specified and only in full compliance with the minimum prices set forth in Schedule A thereto annexed, and in compliance with all the terms and conditions of said schedule; and that:

> to insure the due observance thereof, each of the parties hereto hereby agrees that it will not, except as provided herein or in said Schedule "A," directly or indirectly sell, de-

liver, or otherwise dispose of or be interested in the sale, delivery or other disposition of any Portland Cement covered hereby, or offer to sell, deliver or otherwise dispose of any such cement otherwise than in full compliance with the terms and conditions of this Agreement and of said Schedule "A"; and will not, except as in said Schedule "A" expressly provided, allow to any consumer, dealer, or to any purchaser whatever, any commission, discount, rebate or reduction from any prices fixed in said Schedule "A" except in settlement with insolvent debtors for such cement previously sold and will not, directly or indirectly, grant or give any bonus or gratuity in connection with the sale or other disposition of such cement, except, however, that a prospective purchaser requesting a sample for test may be given a sample not exceeding one barrel. (Vol. II, p. 758.)

It was also provided that the licensor might by written notice to each party reduce the minimum prices generally for any one or more delivery points or sections set forth in Schedule A; that the licensor might upon unanimous vote of all the members of its Board of Directors (the directors being appointed by the six manufacturers mentioned in the certificate of incorporation, to wit, the Atlas, Lehigh, Alpha, American, Vulcanite and Lawrence companies) present at the meeting of the Board, change or add to any of the prices, terms and provisions of Schedule A; that if a licensee should be

held by the ARBITRATOR, elected by the Board of Managers of the Association of Licensed Cement Manufacturers, to have violated any of the limitations, terms and conditions and covenants of the agreement or to have done any act or thing in violation thereof, then *such licensee should forthwith pay* to the licensor as liquidated *damages* and not as a penalty, a sum amounting to not less than five cents per barrel, and not exceeding fifty cents per barrel on the entire amount of Portland cement sold or otherwise disposed of by such licensee in violation of any such limitations, terms, conditions and covenants of the agreement or of Schedule A, and that such damages should be paid " *in case of quotations or offers to sell* as well as in cases of actual sales of Portland cement in violation of any such limitations, terms, conditions or covenants," *but that the damages should not exceed for any one calendar year a sum equal to ten times the amount of the total original deposit of the licensee* as specified in the agreement; and stringent provisions were inserted to enforce the collection of the damages adjudged. It was further required that the licensee should report its production *under oath,* and that all the transactions of the licensee relating to business covered by the agreement was subject to investigation and audit. The country was also divided into Territory A and Territory B. Territory A embraced the New England States, New Jersey, Delaware, District of Columbia, North Carolina, and South Carolina, and all portions of

New York, Pennsylvania, Maryland, Virginia (excluding West Virginia), lying east of a line particularly described: and the provisions of the license applied only to Territory A, unless it should be thereafter extended upon notice. Strict requirements were made with reference to prices, discounts, terms of payment, branch offices, sales agents, purchase of bags, statements of outstanding quotations and contracts, lists of delivery points, and minimum prices; and *in fact there was no subject, however small, which was not fully covered by said schedule.*

It is perfectly manifest that the Hurry and Seaman patent was used as a mere cloak to conceal the real purpose and intent of the parties to the agreement. The principles of the cases decided by the Court of Appeals of the Seventh Circuit, which it was claimed justified the formation of the License Association, have long since been repudiated by this court. But in fact, it can not be in good faith pretended that those decisions gave any justification whatever for the combination and agreement entered into by those manufacturers of cement. The Hurry and Seaman patent only applied to the use of a fuel in the reduction of the raw material to clinker. After it was made into clinker there remained another grinding process by which the material was converted into the finished product. There was no pretense that there was a patent even upon this ultimate process; and of course there was no claim that any invention or improvement was em-

bodied in the finished product. And it is inconceivable that the members of that organization and its attorneys could have believed that such a claim of patent could give any legtimate excuse for an agreement whereby the price of cement and all the practices relating to its sale could be fixed and regulated. It might as well be claimed that all the manufacturers of brick who happen to use some patented device in some process of their manufacture could form a combination fixing the price of brick, or that the millers of the country who happen to be using some patented machine in grinding wheat could fix the price of flour.

While that agreement was discarded and the association dissolved a number of years ago, yet the District Court held that its existence and acts were competent as evidence tending to show the purposes for which the defendants entered into the present Association.

PERIOD FROM JANUARY, 1911, to SEPTEMBER, 1912

So far as the Government has been able to ascertain, the corporate defendants did not belong to any local or sectional organization during the period from January, 1911, to September, 1912. Early in September, 1912, Mr. Morron, the president of the Atlas Company, invited a number of officials of competing companies in the East to have dinner with him at the Knickerbocker Hotel in New York

City on September 26. The invitation to that dinner read in part as follows:

> For some time I have hoped for an opportunity to become better acquainted with the men who are interested in the welfare of the cement industry in the East, and I hope no previous engagement will prevent me having the pleasure of seeing you on the date above mentioned. (Vol. II, p. 777.)

The dinner at the Knickerbocker Hotel was attended by thirty or forty cement manufacturers. (Vol I, p. 337.) The record does not show what transpired at that dinner; but six weeks later, on November 7, 1912, representatives of seventeen of the corporate defendants in this case assembled at the Hotel Astor in New York City for the purpose of deciding on the advisability of forming an association of cement manufacturers having mills located in the East. (Vol. II, p. 778.)

EASTERN CEMENT ASSOCIATION.

The Eastern Cement Association was launched at a meeting of cement manufacturers held at the Hotel Astor in New York City on November 7, 1912. Among others who attended this meeting were representatives of the following defendant corporations:

1. Allentown Portland Cement Company.
2. Alpha Portland Cement Company.
3. Atlas Portland Cement Company.
4. Bath Portland Cement Company.

5. Coplay Cement Manufacturing Company.
6. Dexter Portland Cement Company.
7. Edison Portland Cement Company.
8. Glens Falls Portland Cement Company.
9. Knickerbocker Portland Cement Company.
10. Lawrence Portland Cement Company.
11. Lehigh Portland Cement Company.
12. Nazareth Cement Company.
13. Penn-Allen Cement Company.
14. Pennsylvania Cement Company.
15. Phoenix Portland Cement Company.
16. Security Cement & Lime Company.
17. Vulcanite Portland Cement Company. (Vol. II, pp. 778–9.)

The minutes show that the call for this meeting was sent out by the chairman of a committee which had been appointed to determine the advisability of forming such an association (Vol. II, p. 778); and that a plan, constitution, and by-laws were prepared and ready to be adopted, and were unanimously adopted. (Vol. II, p. 779.)

The record does not show when, where, and by whom this committee was appointed, or when, where, and by whom the plan, constitution, and by-laws were formulated. In view of the fact that the president of the Atlas Company brought the manufacturers of cement in the East together at a dinner on September 26, and that he attended the organization meeting of the Association and was

elected president thereof, it may fairly be inferred that the Association had its inception at the Knickerbocker dinner.

The minutes of the meeting held on November 7, 1912, recite:

> After some discussion the Executive Committee decided that the representation at meetings of the Eastern Cement Association should be confined to Executive Officers only of the Companies who are members of the Association. (Vol. II, p. 780.)

The minutes of the meeting of December 3, 1912, recite:

> Mr. Cox of counsel was also present. Mr. Arthur J. Eddy was present by invitation and explained to members of the Committee the operation of the " Eddy Plan " and answered all questions put to him by members of the Committee and Mr. Cox on same.
>
> It was decided to advise the members of the Association that the question of the adop- of the Eddy plan, or one similar thereto, was being considered by the Executive Committee and would be taken up further. (Vol. II, p. 781.)

The minutes of the meeting of December 27, 1912, show that:

> Mr. Cox of counsel stated that he thought that there was some legal objection to the Eddy Plan in its entirety and some serious objections from a legal point of view to the present Constitution and By-Laws of the Association. He was requested to draw up a

Constitution and By-Laws and a Reporting Plan, eliminating these objections, for submission to the next meeting of the Association. (Vol. II, p. 782.)

At a meeting held January 7, 1913, a proposed form of constitution and by-laws was submitted and adopted. The following excerpts are the only portions that are of sufficient materiality to quote:

Article III. . . . .

(h) To obtain and make available accurate and complete statistical information concerning the manufacture and sale of cement, *including correct statistics regarding the capacities and outputs of all plants* engaged in the manufacture of cement, together with *periodical reports regarding outputs, shipments, orders and prices,* and accurate information concerning labor conditions, material markets, supply markets, and all conditions affecting the industry generally, to the end that each member may have in the most accurate and complete form possible all the data desirable for the most intelligent and efficient conduct of his business. . . . (Vol. II, p. 786.)

Article VII.

No member of the Association shall enter into any arrangement, agreement or understanding of any nature or kind whatsoever the object of which is to restrain trade, limit competition, or accomplish any purpose contrary to the spirit or letter of the law or contrary to the objects of the Association as set forth in this Constitution. (Vol. II, p. 788.)

While this Eastern Association was in existence the Amsterdam Building Company of New York City sought bids on 10,000 barrels of cement required in the construction of the Samaritan Hospital at Troy, N. Y. Eight members of the Eastern Association submitted bids, and every bid was $1.64, f. o. b. Troy, N. Y., with 1 cent per barrel discount for payment in 10 days, 30 days net, and 10 cents for each sack returned. Of the eight companies bidding, seven are defendants in this case, namely, the Alpha, Edison, Glens Falls, Knickerbocker, Lehigh, Pennsylvania, and Vulcanite. (Vol. II, pp. 812–821.)

On January 9, 1913, Mr. Mallory, president of the Edison Company, who was also chairman of the Committee on Statistics of the Eastern Association, transmitted to Mr. Morron, president of the Atlas Company, who was also president of the Eastern Association, a copy of a report by the Committee on Statistics, and added to the letter the following postscript:

> I have sent a duplicate of the above letter to every member of our Association and *also to the companies who are not members* as I believe it is desirable to have them all thoroughly understand the *danger of overproducing in the winter months.* (Vol. II, p. 707.)

On January 30, 1913, Mr. Mallory wrote Mr. Morron suggesting that certain statistics desired be procured from the Portland Cement Association.

(Vol. II, pp. 707–8.) This indicates that the Eastern Association was duplicating some of the work done by the National Association. In this same letter reference was also made to the desirability of forwarding to the executive officer of each of the members a typewritten sheet showing the production, shipments, and stock on hand of each individual company.

The Eastern Association was formally dissolved *on the advice of counsel* on March 4, 1913. (Vol. II, pp. 795, 797.) However, there is reason to question the good faith of the dissolution because on the following day Mr. Mallory, president of the Edison Company, who had been chairman of the Committee on Statistics of the Eastern Association, wrote his sales manager as follows:

> Because of a recent decision of the Court of Appeals in the State of New York, and the recent Wilson bills, passed by the State of New Jersey, it has been deemed wise to discontinue the Eastern Cement Association—not because it is illegal but to avoid the possibility of our action being misinterpreted. *We will make no changes in our trade practice or prices.* (Vol. II, p. 812.)

On March 20, 1913, less than three weeks after the alleged dissolution of the Eastern Association, the sales manager of the Edison Company wrote the president of his company that the Lehigh Com-

pany had quoted a contractor at Tuckahoe, N. Y., $1.67 per barrel, saying:

> This price is 1¢ under the dealers' price and 6¢ under the *book* price to contractors. *Can you not get the Lehigh to withdraw this quotation or permit us to meet it?* (Vol. II, p. 812.)

Back in the days of the Licensees Association, which was abandoned in January, 1911, there was a price book which showed the price to dealers and contractors at any given point of delivery, and this reference to a book price indicates that the manufacturers of Portland cement were still using some kind of a price book.

CONDITIONS IN THE TRADE BETWEEN DISSOLUTION OF EASTERN CEMENT ASSOCIATION ON MARCH 4, 1913, AND ORGANIZATION OF CEMENT MANUFACTURERS PROTECTIVE ASSOCIATION ON JANUARY 6, 1916.

The evidence shows conclusively that following the dissolution of the combination of licensees of the North American Company, in parts of 1914 and 1915, competition assumed the proportions of a price-cutting war. Mr. Elliot, who was in 1914 and 1915 with the Alpha Company, but now is vice-president in charge of the sales of the Whitehall Cement Manufacturing Company, testified that prices went very low in 1914 and 1915. He thinks the price was the lowest at which cement had ever been sold. He sold cement as low as 60c at the mill.

(Vol. I, p. 152.) Mr. Whipple, who at that time was salesman for the Atlas Company, said that in 1914 and 1915, there was more competition than at any other time during the five years from 1910 to 1915; that the general trend was downward from perhaps the fall of 1914 until the late spring of 1915; that the lowest point quoted was 58c a barrel at the Lehigh Valley base; but that it advanced considerably the latter part of the summer and in the early fall of 1915. (Vol. I, p. 169.)

Luther Keller, a dealer who resided in Scranton, Pensylvania, gave the price at Scranton, beginning with the month of April, 1915, when it was at its lowest point, as $1.25. In May it increased to $1.35; in June to $1.45; in August to $1.55; in October to $1.65; and in December to $1.70, where it remained until July, 1916. (Vol. I, p. 173.) Mr. Gilbert, a dealer, and Mr. Oakley, a builder, also remembered the cutting of prices in 1914 and 1915. (Vol. I, pp. 185, 222.) Mr. Morron, president of the Atlas Company, described the price war in some detail. He said it began in 1914. At that time the mill price was 90¢ a barrel. His company did not lead in putting the price down, nor in putting it up. The price went as low as 60¢, but Atlas did not go below 65¢ except in rare instances. He always thought that the attack was principally by the Lehigh Company on the Atlas Company for the purpose of taking away its dealers, which is probably the most valuable asset a manufacturer has. He doesn't think that they looked upon the Atlas Company as

being in particularly strong financial shape; and they commenced to drop the price and kept it going at 5 or 10¢ a time until everybody was losing money. The Atlas met it until it got down to 65¢, when it notified its salesmen to go to the trade and explain the situation, and give them to understand that the Atlas would not sell below that price no matter what the other fellows did; and they got a good deal of business at 65¢ while the other fellows were taking business at 60¢. The price began to rise in May, 1915. The average price realized by the Atlas for the year was 72¢. (Vol. I, pp. 332–333.)

But during the entire period from March 4, 1913, to January 6, 1916, when the defendant association was organized, there were communications passing, and some kind of tacit understanding existed between some of the manufacturers, probably nearly all of them; and there was also from time to time an effort, especially upon the part of Mr. Morron, to bring about another organization. This is clearly shown by the following correspondence:

On July 22, 1913, Mr. Morron, of the Atlas Company, wrote to the president of the Whitehall Portland Cement Company (not a defendant in this case) thanking him for certain statistics, and observing that the ratio of shipments to production—

> is just about right, and the percentage of operation as related to maximum was very well attended to in each instance. (Vol. II, p. 708.)

In a speech delivered in December, 1913, at the annual dinner of the Cement Manufacturers, Mr. Morron said:

> Good judgment in regard to output will be far more substantial than even the best distributing advantage and force which any company may have. In an industry which has shown a continued increase from its inception in this country, where amounts shipped each year for 10 years has been greater than the preceding year, and where new usages are going to increase the demand, in spite of general present conditions, *it would behoove each one of us, and not just some of us, to be cautious in not manufacturing and carrying in stock the capacity of a mill but to curtail according to what each may think is a normal condition, and realizing that should he continue to violate the 11th commandment he will force others into the same position.* (Vol. II, p. 709.)

When called upon to explain the Eleventh Commandment, Mr. Morron said it was "Don't be a hog." (Vol. I, p. 337.) In other words, "Don't overproduce."

On February 16, 1914, Mr. Morron wrote Mr. Hagar, president of the Universal Company (not a defendant in this case), stating among other things:

> Your stock on hand February 1st was less than it was on January 1st and it brought to my mind that *perhaps the difference might be in clinker unreported.* Am I right? (Vol. II, p. 710.)

In a letter dated April 9, 1914, Mr. Morron transmitted to Mr. Hagar the Atlas production figures for March, 1914, observing:

> You will notice that we are way below our March of last year, too. (Vol. II, p. 710.)

On May 14, 1914, Mr. Morron again wrote Mr. Hagar saying:

> Enclosed find our figures for April. (Vol. II, p. 710.)

On March 5, 1915, Mr. Morron wrote Mr. Affleck, who then appears to have been president of the Universal Company, in part as follows:

> I am very glad to have your letter of the 3rd and return you our figures for the month of February *and write particularly to congratulate you upon the curtailment of your output of both clinker and finished product.* It is the science of merchandising to do this and it will win in the end just as sure as night follows day. (Vol. II, p. 711.)

It is especially significant that two of the largest manufacturers of Portland cement in the world should be curtailing their output in February, on the threshold of the open season for cement. At the very time they should have been filling their bins with cement to meet the prospective summer demand they were curtailing production and congratulating themselves for doing so. Attention is also invited to the distinction drawn between clinker and the finished product.

In July, 1915, an effort was under way to bring together representatives of five or six of the larger cement manufacturing companies. On July 12, 1912, Mr. Morron addressed a letter to Mr. Gowen, a vice president of the Lehigh Company at Chicago, which reads as follows:

> On my return this morning I find your telegram of the 9th and have just wired you that if convenient to you, I should prefer Thursday, July 22, to see the gentlemen whom you mention. I would like very much to have all of you lunch with me at one o'clock if you will on the day that you are here. *I have no doubt at all that the topic which you want to discuss is one that we have a perfect right to discuss,* and I know you feel as I do that if five or six important cement companies get together for a meeting, that it is very often misconstrued. I know this to be so because of the fact that when the United States was looking into the cement situation as applied to previous years, that one of the questions asked me over and over again was, had I been in conference with my competitors. I told them I had, if there had been any conference, and then always told them exactly what was discussed, so that we must be sure that with such a meeting as you suggest, we only discuss the things that can be reported. Please pardon my making this suggestion, as I feel that it already echoes your own ideas, but there are so many people eager to misrepresent conditions that I wanted to go on record as to just how we felt.

> I hope you will be able to accept my luncheon invitation, which will be a pleasure to me, and, if so, will you extend the invitation to the other gentlemen. (Vol. II, p. 998.)

With the recollection of an investigation of the cement industry by the Government fresh in his mind, the president of the Atlas Company realized the importance of making a record for use in the future should the Government again investigate the subject.

Mr. Gowen's reply to the above letter reads as follows:

> I have before me your letter of July 12th and will be more than delighted to take lunch with you at one on Thursday, July 22. The matter we are particularly anxious to talk over is one which is close to your heart I know, viz., pertaining to the furtherance of the Association and the people I was anxious to have there are Mr. Young, Mr. Brown, Mr. Affleck, you and myself. I talked to Mr. Affleck over the telephone this morning, and he stated that one o'clock would be agreeable to him, and if you will let us know the place where we are to meet for lunch, I will arrange to be there at the time you mention. (Vol. III, p. 1122.)

Mr. Morron claimed in his testimony that after looking it up he was satisfied that the topic referred to was the change of the manager of the National Association. (Vol. 1, p. 328.) But the character of the correspondence, especially the wary tone of Mr.

Morron's letter, is striking. Why not mention such an innocent purpose outright? Why should they feel that the meeting of five or six manufacturers of cement was such a suspicious incident when the National Association was functioning continually?

Neither of these letters contains any reference to the change of an officer or employee of the National Association; and two other letters exchanged between the same parties prior to the luncheon on July 22 contained no reference to such subject.

Anyway, representatives of the Atlas, Lehigh, and Alpha Companies, the three largest cement manufacturing companies in the United States, met together on July 22, 1915, and had an opportunity to discuss any subject in which they were mutually interested.

An important circumstance is that this correspondence was had and the meeting was held during the time of the fierce trade war. And Mr. Morron attributes the war *to an attack by the Lehigh Company upon the Atlas.* (Vol. I, p. 332.) Yet they are found sitting at the same table with the most friendly relationship existing between them.

In October, 1915, a few months prior to the organization of the Protective Association, Mr. Coogan, a vice president of the Alpha Company, addressed the following letter to Mr. Beach, president of the Pennsylvania Company:

> As you are aware, the undersigned, in connection with Mr. Mallory, *has been appointed to gather, tabulate, and disseminate certain*

statistical information with regard to the production, shipments, and stocks of cement AND CLINKER, and also information regarding contract obligations extending beyond January 1, 1916. We are anxious to have, just as early as possible, a statement of your contract obligations extending beyond January 1st.

In order to enable us to have this information properly tabulated, we would appreciate it very much if you would kindly make up a list of your contracts, giving the information with regard to same as shown on the attached form. These contracts will then be tabulated and lists of same distributed some time during the early part of November.

I trust you will let us have this information promptly so that we will be in a position to have this work completely finished up by November 6th.

Please note we would like the information with regard to contracts, whether such contracts are made direct with the contractors, consumers, or dealers.

It will not be necessary at this time to furnish us with any information in regard to contracts which expire on or before December 31st, 1915. (Vol. II, p. 999.)

This letter indicates that preparations were being made to launch the Protective Association, and that *it was desirable to know how much stock and how many orders each company would have on hand as of January 1, 1916,* to be used probably as a basis for representation or for the assessment of dues.

In November, 1915, Mr. Horner of the Nazareth Company wrote Mr. Morron concerning current reports that the Nazareth Company had largely increased its capacity by adding two kilns, stating that—

> This seems so unfair I wish you to know the true conditions. (Vol. II, p. 715.)

Why should an official of the Nazareth Company consider it important that the president of the Atlas Company know the truth about the operations of his company unless there was some understanding between them? However, the report afforded Mr. Morron another opportunity to expound his views on the subject of production, viz.:

> Thanks for yours of the 15th. I never pay any attention to rumors. Am glad you are not to operate the extra two kilns because if your company is run as ours we find it much sounder to regulate manufacturing in relation to our demand. There always has been a great temptation to run mills full, and I do not believe it is to the interest of public policy to do it.
>
> We must not, of course, any of us, do anything that is without the spirit of the law, but good business sense is a thing each company should take into consideration. It is their duty to do it. As far as I am concerned, I expect to continue in this business, as I always have, in trying to regulate supply and demand as far as this individual company is concerned. (Vol. II, p. 715.)

On November 9 and 10, 1915, the president of the Lehigh Company entertained a number of gentlemen engaged in the cement industry at his estate near Allentown, Pennsylvania, in order that they might see some of the beauties of nature around Allentown. (Vol. II, p. 713.)

On November 4, 1915, a number of cement manufacturers held a meeting at the Machinery Club in New York. The minutes of this meeting show that lists of outstanding contracts as sent to each member by the secretary were discussed. (Vol. II, p. 716.) Therefore, the functions of an association were being performed whether the participating parties were organized or not. When this meeting adjourned, those present were invited to attend a further meeting at the Union League Club in Philadelphia, on November 18, 1915. The record does not show the nature of the business transacted at this meeting.

On November 19, 1915, a number of cement manufacturers held a meeting at the Hotel Raleigh in Washington, D. C. The exceedingly brief minutes of that meeting show that certain misunderstandings between mills in the South and mills in Maryland and the Lehigh Valley district were discussed. It was then decided that there should be frequent meetings for the dissemination of information regarding Trade Practices, and that the next meeting would be held in New York on December 14, 1915. (Vol. II, pp. 716–717.) The record does not show whether that meeting was actually held or not.

In November, 1915, Mr. Morron wrote from St. Louis to Mr. MacFarland, one of his assistants, in part as follows:

> The main reason for my writing you this letter is because, in a talk which Mr. McConnell had with me yesterday afternoon, he related having been shown a memorandum of what he called some meeting held in Washington, of the southern manufacturers of cement and some others, as I recall it, in which your name appears, and Mr. McConnell stated to me that the record of that meeting as it had been shown to him was one that he felt sure I would not approve of, and that brought up to my mind a condition on which I have spoken to you a great many times and which I feel sure you fully appreciate, but I want to emphasize it again.
>
> The Atlas Company wants to do anything it can legitimately to improve trade ethics. We have made changes in our terms to five cents a barrel so as to make it an inducement for dealers to handle cement as against other building materials. We are willing to do anything that is within the spirit of the law to straighten out bad customs, but the Atlas Company will not and must not take part in any conference which might be misinterpreted.
>
> I know you feel just as I do on this, but it is a good deal like an automobile; it is not what you do yourself when you drive, but you have got to be on the lookout for what the other fellow does, and while you might not

have any intention of entering into any conference that would touch upon any matters other than those which we believe in, still if you take four, five, six, or a dozen men and put them together, somebody is liable to misinterpret it, and the Atlas Company is so staunch in its policy that I feel it necessary to write you this letter again so that you may be guided thereby.

Now, do not misunderstand me; I do not think you have done a thing you should not have done, but in the enthusiasm of some of these other fellows, you can not tell what they will report, and I do not want you to take part in any conferences of any kind that are not strictly in accord with our policy.

Furthermore, it seems to me that it would be the safest thing, even when you are talking over these ethics which we have a right to discuss, as I understand it, that you should have Mr. Cox or some lawyer there to take down the record of the meeting, so that there can be no misunderstanding, or that no one, after it is all over, can say that you were trying to do something which you really did not intend to do.

At the time of the investigation, about a year ago, of our company and others in the industry, I was perfectly frank in showing them everything and telling them the exact conditions, and the only danger that we are in at any time was what some other fellow said we were trying to do, not what we were really trying to do, and the strength of our

> position was that I had a record of our intentions, and we were not depending upon somebody else's memory as to what was done.
>
> This must have your very careful attention and you must handle the matter on those lines always and without exception. (Vol. II, p. 717.)

This letter indicates the ever present desire on the part of the president of the Atlas Company to make a record for the inspection of representatives of the Government who might be investigating the industry, and one that might be used as evidence in its behalf in case an action should be brought by the Government. This is a legitimate inference because one who knows he is walking on solid ground does not stop to warn a companion against quicksand. And if the president of the Atlas Company was so fully cognizant of the danger of the interpretation which might be put upon meetings between men in the cement industry, and that the action of one man might involve all the others in difficulties, why should he allow his company to continue to participate in meetings?

Upon receipt of the foregoing letter, Mr. Morron's assistant proceeded to prepare for the files of the Atlas Company a memorandum, dated December 1, 1915, which reads in part as follows:

> At an informal meeting of various eastern manufacturers at the Railroad Club held November 30th, I made the statement that from two recent letters I had received, I felt there might be a misapprehension as to the

> exact position of the Atlas Company in connection with the handling of its business, and therefore wanted to state that we were always glad to furnish and receive statistical information of past performances and that we would be willing to do anything that was within the spirit as well as the letter of the law to correct bad customs, but that we would under no circumstances be a party to any arrangement that might be construed as having at any time a price understanding or agreement * * *. (Vol. II, p. 718.)

Further evidence of the precaution taken by representatives of the Atlas Company is contained in a letter dated November 30, 1915, addressed to the Bath Company:

> I am at a loss to understand why this information is conveyed to me, as there might be construed the thought that there is some understanding between us, and perhaps you are under a misapprehension as to the exact position of this Company with reference to its Sales Policy, and that there may be no misunderstanding, we want to state that we are not interested in the details of your Company's sales any more or differently than we are interested in the sales of all or any one of our competitors.
>
> We are, of course, always glad to know, as nearly as possible, the trade practices pursued by our competitors and their volume of sales and other statistics of past performances, but we will not under any circumstances countenance or approve of any

> method that in the remotest degree savors of any understanding or agreement, such as your letter may be construed to assume. (Vol. III, p. 1109.)

In December, 1915, the president of the Atlas Company held a telephone conversation with the president of the Edison Company, and a memorandum of that conversation was placed in the files of the Atlas Company. This memorandum reads as follows:

> President Morron stated to Mr. Mallory that *it was his understanding that the statistics compiled by Mr. Mallory showed the production in past years of the various plants*, and *that wherever he showed a minus sign it would indicate that the Atlas Company's average production for this year was less than its average production for the three years;* and *that wherever he showed a plus sign, it would indicate that the Atlas Company's shipments averaged greater than the average for the three years.* This information is valuable, as by these plus and minus statements he was able to determine Atlas volume of business. President Morron stated to Mr. Mallory that he felt that *at the recent conferences* some of those attending misinterpreted the object of the compilation of these statistics and have inferred that they were dealing with the price of cement, and that he had written Mr. MacFarland to that effect, instructing that he should not be a party to any further conference, *because some of those attending such conferences*

> *seemed to be impressed with and to convey the idea that they related to prices,* which was not to be considered for a moment, and therefore we would not be a party to or take part in any way in any further conferences, nor would we be represented at any time or place with anyone except a chaperon be present, meaning an attorney. (Vol. II, p. 719.)

Here is a clear admission that they *were holding conferences, and that some of the manufacturers understood that those conferences related to prices.* Yet within two or three weeks after this memorandum was planted in its files, the Atlas Company assisted in the organization of the Cement Manufacturers' Protective Association.

That those conferences did relate to prices, and that the Atlas Company knew of that fact, and was a party to the tacit understanding is shown by a memorandum taken from the files of that company relating to the opening of bids submitted to the city of Worcester, Massachusetts, on July 15, 1916. This memorandum contained the following statement:

> You will note that the only two manufacturers who bid direct *maintained the proper price.* (Vol. II, p. 719.)

In January, 1916, shortly after the organization of the Protective Association, Mr. Mallory, president of the Edison Company, wrote Mr. Morron, president of the Atlas Company, as follows:

> At the meeting of January 14th of the Cement Manufacturers Protective Associa-

> tion it was decided that statistics relative to the production, shipments, and stock on hand should hereafter be sent direct to the Secretary and compiled by him; and in accordance with this action *the December sheet* which is already in your hands will be the last sheet that I expect to compile. You will remember that at the time of the Association meeting at Baltimore I spoke to you, and you in turn took the matter up with Mr. Young, as to the matter of checking the statistics, and since that time I have personally expended $135.65, covering the salary and expenses of the men doing the checking, also the printing and mailing of the sheets themselves, together with trips which it was necessary for me to make to the Tidewater, Whitehall, and Knickerbocker offices to obtain the statistics. (Vol. II, pp. 720–721.)

This letter shows conclusively that shortly *before* the organization of the Protective Association the manufacturers of cement in this section of the United States were collecting and exchanging statistical data.

The conduct of the officers of the Atlas Company in planting in its files correspondence and memoranda, and the testimony of Miss Mary K. Kavanagh correspond exactly, and each corroborates the other. Miss Kavanagh testified:

That she was employed by the Atlas Company November 4, 1904, and remained with them until April 16, 1920. She was first a stenographer in the Transportation Department for about eight months.

She then worked for Mr. Miner, comptroller of the company, the president's right hand man. She remained with Mr. Miner until 1911, when she began work for Mr. Holman, who was assistant to the president. She worked for Mr. Holman until 1920, but during his absence because of ill health she worked some for Mr. Burch and also steadily for Mr. MacFarland, who assumed the duties of Mr. Holman in his absence. Her office was between the offices of Mr. Morron and Mr. Holman. (Vol. I, p. 205.) She said that before the period of the world war the Atlas Company was visited from time to time by other cement manufacturers; that they would come in one by one and stay from ten minutes to half an hour, very seldom more than an hour; that they would go into Mr. Holman's room; that their visits would occur at least once a month, but all of them would not come each month. Those who came were Mr. Young and Mr. Swett of Lehigh; Mr. Coogan and Mr. Brown of Alpha; Mr. Mallory of Edison; Mr. Hilles of Dexter; Mr. Moyer and Mr. Lober of Vulcanite; Mr. Griffith of Giant; Mr. Smith of Lawrence; and Mr. Loeb of Coplay. *She removed certain correspondence out of the files and put it in a folder and gave it to Mr. Holman. That was just before the Government started an investigation. Mr. Holman said that they had a suspicion that the Government was going to make an investigation, and that she was to go through the files of the office and take out anything which she thought was of a damaging nature (Vol. I, p. 212), as she*

naturally knew what was damaging. She put it in a folder and put it on the center table in Mr. Holman's room. He took it out and went into Mr. Miner's room and she never saw it after that. Shortly afterwards the Government inspectors came, and she showed them where the files were, and they went through the files. With reference to when this occurred, on examination in chief, she said:

> I think it was just before the war started, about 1913 or 1914. I think it was 1914, although I am not sure. (Vol. I, p. 207.)

She afterwards said in speaking of the World War that she meant after the United States got into the war on April 6, 1917. (Vol. I, p. 208.) On cross examination she stated that she gave those papers to Mr. Holman before the Government inspector arrived. As to the length of time, she said it certainly wasn't a week before. (Vol. I, p. 212.) And after being pressed as to dates because Mr. Holman was absent a great part of the time on account of his health she said:

> I may have been mistaken about the year, but Mr. Holham did it personally. He was in the room. I can see him just now if I close my eyes. I remember him telling me to take out those papers. I remember putting the papers on his desk, and I can see him walking out of that room with the papers under his arm, going into Mr. Miner. I can see the whole thing. I have a very vivid recollection of things that are not honest. (Vol. I, pp. 213–214.)

And again speaking of dates she says:

> I am not sure of my dates; I am sure of my facts, but not my dates. (Vol. I, p. 214.)

From a wire from DeWoody, one of the Government's agents who investigated the cement companies, to Mr. Bacon, then secretary of the National Association, and Mr. Bacon's answer (Vol. II, pp. 667–8) it appears that one investigation by the Government was in progress in December 1917; but it also appears that there had been a previous investigation in 1914. (Morron's letter to MacFarland, Vol. II, p. 718.) The removal of this correspondence shows why the information was so meager with reference to the situation existing prior to the organization of the defendant Cement Manufacturers Protective Association; and the frequency of the investigations by the Government indicates why Mr. Morron was so anxious to have the proper kind of correspondence and memoranda in his files.

IV

CEMENT MANUFACTURERS PROTECTIVE ASSOCIATION

On January 6, 1916, the Cement Manufacturers Protective Association was organized. At that meeting a plan, constitution, and by-laws were ready to be adopted and were adopted, all necessary arrangements having previously been made for the Association to begin functioning immediately. The lack of information showing where and by whom the

preliminary work incident to the launching of this Protective Association was done was commented upon by the vice president of the Association at a meeting held in November, 1920, when he announced that he was trying to compile a history of the organization of the Association, and called attention to the fact that "the minutes of the organization meeting start right out without leading up to the organization of this association." (Vol. I, p. 613.)

Manifestly much preliminary work had been done which involved conferences, correspondence or phone calls, and quite a lot of stenographic work. Here again Miss Kavanagh and the circumstances shown are strikingly corroborative. With reference to the organization of the association and the papers relating thereto she testified:

That she remembered about the organization of the Cement Manufacturers Association. The Atlas Company had a great deal of correspondence in regard to it which was dictated by Mr. Holman. This correspondence extended over a period of several months, surely three or four. All the correspondence which related to the formation of the association she either sent to a certain one of the attorneys of the Atlas Company or he came after it, and that firm has the entire file relating to that matter. She doesn't remember when it was taken, but she put a slip of paper in the file which had the attorney's name written on it. (Vol. I, pp. 205–6.)

An attempt was made to discredit Miss Kavanagh on cross examination mainly by showing that

Mr. Holman was absent from his office a part of the time because of sickness, and could not have been present at the times mentioned by the witness. When the trial was had Mr. Holman was in Phoenix, Arizona; and he sent to Mr. Morron a telegram which the Government permitted to be introduced as a sworn statement. The telegram reads as follows:

> First went to Loomis, December Nineteen Fourteen returned to New York November Nineteen Fifteen and left in one week for Arizona, returned to New York, April Nineteen Seventeen was there until August, Nineteen Nineteen then Saranac, was there three months then left for Arizona, returning New York, May, Nineteen Twenty One. (Vol. II, p. 1088.)

Clearly there is no inconsistency between the facts stated in this telegram and Miss Kavanagh's testimony. Holman was in his office in New York until December, 1914, and one week in November, 1915, and from April, 1917, until August, 1919. Therefore the papers which Miss Kavanagh took from the files because of their damaging nature could have been delivered to Mr. Holman immediately before the Government's investigation of 1914, or in or after April, 1917, as that investigation was being conducted in December of that year. And he could have dictated some of the correspondence relating to the organization of the association while in New York during November, 1915, which

was one month before the organization meeting was held. As a perusal of the minutes of the association will show, when present, and he was often there, he was the dominant figure among them. Absolute accuracy upon the part of the witness as to every detail can not be expected after five or six years had intervened, as there was no special reason to charge her memory with details. *Furthermore, no contradictory evidence was introduced with reference to either the stripping of the files of damaging documents and delivering them to Mr. Holman or to the delivery to counsel for the Atlas Company of the papers relating to the organization of the Association.*

The work was therefore done where one would expect to find it, *right in the office of the Atlas Company.*

The organization meeting was attended by representatives of 14 of the 19 corporations which are defendants in this case. The purpose of the meeting was stated by the chairman Mr. Lober, of the Vulcanite Company, as follows:

> We all understand what we are here for. I was requested to call you here to consider the plan, *copies of which have been sent to you;* and the idea was to have you go over it carefully and I presume you have done that. . . .
>
> Of course you understand *that the idea of this thing is cooperation and I think it is not necessary to say any more on that point. We all agree that the necessity of coopera-*

tion is acknowledged by everybody in the industry. The only question now we have to determine is how we can best make use of cooperation. . . . (Vol. I, p. 401.)

After some discussion the plan, constitution and by-laws were adopted by a unanimous vote. (Vol. I, p. 405.) The following are the parts of the plan, revised to January 1, 1921, which are of particular interest:

Outline of Plan

The reasons stated as a justification of the organization are as follows:

> Conspicuous among the evils from which every manufacturer of Portland Cement has long suffered have been certain notorious abuses arising from what amounts to fraudulent misrepresentation. The most common and flagrant instances are those which have to do with misrepresentation concerning contracts (known as "specific job contracts"), competitors' acts, and financial responsibility.
>
> Although these abuses are too well known to require elaboration, it may be desirable to look at an illustration of each, with a view to determining whether it is practicable in a measure to correct them:
>
> (1) It has become common, for example, in cases of jobs in fact involving the use of, say, a thousand barrels of cement, for purchasers to contract with each of several manufacturers for, say, two thousand barrels of cement to be used on that specific job. This

pernicious practice results in purchasers obtaining what, as a practical matter amounts to an option extending over a long period; and, in the aggregate, such options induced by, and based on misrepresentation, impose on the manufacturer one-sided, uncertain obligations covering a considerable portion of his output, frequently curtailing his business and resulting in loss.

It is apparent that such abuses could not exist if the truth were known. If the manufacturer knew the facts concerning the job, the amount of cement needed, whether his or some other cement was being used thereon, he would obviously be in a position to escape the disastrous consequences of such misrepresentations. The plan hereinunder outlined is designed to make the truth available and thus defeat misrepresentations and their consequences.

(2) The second form of misrepresentation is illustrated by the common experience of every manufacturer of Portland cement with statements made to him not only by dealers but often by his own salesmen concerning competitor's practices, with the result that the manufacturer is deceived and imposed upon. In the following plan it is not proposed to provide the fullest relief against such misrepresentations, because reports of outstanding or active offers or quotations may be objectionable, but it is proposed to give the manufacturer an opportunity of checking the representations of dealers and salesmen by including with the infor-

mation as to specific contracts, the price at which these past transactions have been closed, so that false statements may become less frequent.

(3) As to that kind of misrepresentations which have to do with credits, the plan explains itself. Here, again, the correction of the evils resulting from the misrepresentation is to be sought in making the truth available.

(4) In addition to the correction of these abuses by meeting misrepresentations with the truth to the extent indicated, the plan contemplates the giving of certain statistical information concerning the past, which has heretofore been available in less convenient form and is included because it may be included without much additional inconvenience to anyone.

(5) The plan further contemplates the compilation and publication of freight rates to relieve each manufacturer of the great burden of keeping track of this necessary information. (Vol. I, pp. 353, 354.)

CONSTITUTION.

ARTICLE I.—*Name.*

The name of the Association shall be CEMENT MANUFACTURERS PROTECTIVE ASSOCIATION.

ARTICLE III.—*Objects.*

The objects of the Association are the collection and dissemination of such accurate information as may serve to protect each

manufacturer against misrepresentation, deception, and imposition, and enable him to conduct his business exactly as he pleases in every respect and particular, free from misdirection by false or insufficient information concerning the matters following, to wit:

(a) Information concerning credits.

(b) Information concerning contracts which have been made for the delivery of cement, sufficiently complete to enable the manufacturer to protect himself against spurious contracts and like transactions induced by misrepresentation.

(c) Information concerning freight rates on cement.

(d) Statistical information as to production, *stocks of cement* and *clinker on hand*, and *shipments*. (Vol. I, pp. 355–6.)

ARTICLE V.—*Officers.*

Section 1. The officers shall be a President, Vice-President, Secretary, and Treasurer.

The Vice-President and Secretary shall be elected by the Association for such term as it may determine and may receive a salary, fixed by the Association. (Vol. II, p. 356.)

ARTICLE VIII.—*Freedom of Trade.*

No member of the Association shall enter into any arrangement, agreement, or understanding of any nature or kind whatsoever,

the object of which is to restrain trade, limit competition, or accomplish any purpose contrary to the spirit or letter of the law or contrary to the objects of the Association, as set forth in this Constitution, and membership in the Association shall be recognized as implying that the member is absolutely free to conduct his business exactly as he pleases in every respect and particular. (Vol. I, p. 357.)

BY-LAWS

SECTION 2. *Vice-President.*—The Vice President shall perform such duties in connection with the collection and dissemination of the information which it is the object of the Association to accomplish as may be assigned to his office by the Association.

* * * * *

SECTION 4. *Secretary.*—The Secretary shall keep a careful, full and complete record of all the meetings, discussions and transactions of the Association, give notice of all meetings of the Association, examine all bills, conduct the correspondence, collect, prepare and distribute the information contemplated by the Constitution as prescribed by these By-Laws, and perform such other duties as may be assigned to his office by the Association.

SECTION 5. *Provision of Funds.*—All assessments shall be fixed by a majority vote of the Association and distributed among and paid by the members pro rata according

to shipments during the preceding year from or into the territory covered by the service of the Association.

* * * * *

SECTION 7. *Meetings.*—The Association shall meet monthly, the time and place of each meeting to be fixed by the Association. Special meetings may be called whenever the President shall deem it necessary or upon request of five (5) members. A majority of all the members shall constitute a quorum.

* * * * *

SECTION 8. *Collection and Distribution of Information.*—On or before the fifth day of each calendar month each member shall forward to the secretary the following:

(1) A statement of all accounts outstanding sixty (60) days or more and unpaid, giving the name and address of the debtor, total amount unpaid, and the time overdue specified by months.

A statement of all bills receivable, on hand, giving name of purchaser, amount, date payable, and detail of account covered by note.

A list of accounts in attorneys' hands for collection.

(2) A statement of contracts which have been made and are in effect on the last day of the preceding calendar month, giving the following information with respect to each contract, namely, date of contract, the purchaser, the consumer, a full description of the work upon which the cement is to be used, the amount contracted for and the

amount yet to be delivered, the price, and the expiration date of contract. In addition to the foregoing monthly statement of contracts, as contracts are made during the month, the Secretary shall be notified as soon as possible.

(3) A statement of all contracts cancelled or reduced in amount during the preceding month.

(4) A statistical statement of production and shipments during the preceding calendar month and stock of cement and clinker on hand on the last day of the month.

Upon the receipt of the foregoing monthly statements, the Secretary shall forthwith put all the information contained therein in convenient form as directed by the Association and distribute the information thus prepared to the members reporting.

The Secretary shall also transmit the information thus prepared to the person performing corresponding duties in any other association, collecting and distributing like information within the purview of the Constitution, and receive and distribute to the members of this Association such information transmitted from such other association, as may be from time to time directed by this association.

The Secretary shall prepare and distribute among the members a complete schedule or schedules of freight rates, on cement, giving the rates for rail, water, and rail and water shipment. Each member shall from time to time notify the Secretary of all

changes or other facts of importance connected with such rates. The Secretary shall immediately advise all members of changes in freight rates by issuing supplements, revisions or otherwise, as may be most convenient. (Vol. I, pp. 358, 359.)

Location of Office

Those present at the organization were conscious that the assembling together of competitors was unusual, and would naturally excite the suspicion of those having knowledge of such fact.

In the course of the discussion as to when and where the second meeting of the Association would be held the following remarks were made:

> Mr. Morron (Atlas): Just one thought, on that, Mr. President. I am wondering whether having the meeting in this Club is a particularly good thing. You come in contact with people with whom you are doing business, who might misinterpret it to some extent. A great many men that you do business with are members of this Club, and it seems to me that that might be misconstrued by some who are always willing to misconstrue things. If they saw a great big group of cement men coming into this Club constantly——
>
> The Chairman (Vulcanite): How about a hotel?
>
> Mr. Morron: I should say that until you have some regular place to meet, a hotel would be a better proposition. . . .

* * * * *

Mr. YOUNG (Lehigh): I do not think it would be a bad stunt at all to have your meeting up at the Biltmore. *We are accustomed to going there,* and *we could get one of the rooms upstairs* and serve a light luncheon, *as we generally have at the Association meetings.*

President GRIFFITH (Giant): That was my idea. (Vol. I, p. 409.)

The second meeting was held at the Biltmore Hotel. (Vol. I, p. 411.) Mr. Brobston (Dexter) suggested that the office of the Association be located at Bethlehem, Pa., which brought forth the objection from the Chairman (Vulcanite) that the office would "be rather conspicuous in a place like Bethlehem."

Mr. Morron (Atlas) favored New York City, where counsel would be convenient "and we are sort of swallowed up in the great big life around us." (Vol. I, p. 410.)

V

EFFORTS TO ENLARGE MEMBERSHIP OF ORGANIZATION AND TO FORM WORKING RELATIONSHIP WITH OTHER ASSOCIATIONS

It was believed by the members from the beginning of the organization that its success depended upon the relative number of the manufacturers within the territory that belonged to the Association, upon the degree of cooperation among the

members, and also upon the extent of the cooperation between this Association and the associations organized for contiguous territory. This is shown especially by discussions which were from time to time had in their meetings, and also by correspondence. Thus in the organization meetings, Mr. Bayle (Glens Falls) inquired whether any particular number had signified their intention of joining the organization. The Chairman stated that it was taken for granted that all present had so signified their intention; that the Alsens Company had promised to have a representative there; and that the Bath people had submitted the plan to counsel, and would be governed by his advice. Inquiries were made of the Chairman if he had heard from the Knickerbocker or Helderberg, and he said he had not heard from the Helderberg. It was stated that the Nazareth would also join. Mr. Bayle then said:

> It is very important to get those in. . . .
>
> Mr. BAYLE: *I think, Mr. President, it would be also necessary that the newly-elected officers should try to see the companies that are not here represented, and get them in here. One or two companies staying out might destroy all the good work the rest of us might do.*
>
> The CHAIRMAN: Mr. President, will you take that up with the Knickerbocker and the Helderberg?
>
> President GRIFFITH (Giant): Yes, sir. (Vol. I, pp. 408-409.)

At the meeting held January 14, 1916, Mr. Brobston (Dexter) said:

> In that connection, Mr. President, I understood the president was to appoint a committee to see the representatives of those companies who were not present at the last meeting and the secretary sent out notices not only to those who were present at the last meeting but to all of the companies in the Lehigh Valley District and Maryland District and the New York State District. Under those circumstances I might give you a list of the companies to whom notices were sent and the president could report as to the status of the companies as their names are called.

And then a list of companies that were not represented was gone over, and the members stated what was known about their intention to join. (Vol. I, p. 411.) At the same meeting the president asked:

> Is it the feeling of the members that we want to go to the southern mills and ask them to join us in this Association?
>
> Mr. WEAVER (Allentown): Will they file their contracts with us just the same as the western association?
>
> Mr. SWETT (Lehigh): The same as the western.
>
> Mr. COOGAN (Alpha): I think they could become affiliated with us.

And the president inquired whether it would be satisfactory for them to organize an association of their own and report their contracts as an associa-

tion, because it would be difficult for them to meet with this association.

> Mr. SCOTT (Giant): In that case I think we would consider the idea of affiliation with those southern companies.
>
> Mr. WEAVER: You would probably join a southern association?
>
> Mr. SCOTT: I think we would join the southern companies. (Vol. I, pp. 413–414.)

And there was an extended discussion relative to the southern companies, in which the following views were expressed:

> Mr. BROBSTON (Dexter): Mr. Chairman, I don't think that it would be of advantage to have the mills south of the Virginia line in this Association.
>
> This is a homogeneous Association, one where the information that is got for one is gotten for all of us; and I think it would be very much better for the mills south of the Virginia line if they would have their own Southern Association.
>
> Mr. SWETT (Lehigh): I agree with you, Mr. Brobston, I think the southern mills should have their own association because *they will want to come in and affiliate with the Western Association and the Eastern Association just as we have now with the Western Association and have an exchange of information.*
>
> Mr. SCOTT: Personally, I agree with Mr. Brobston. *The business of this entire plan is the matter of exchange of information*

and we cannot accomplish very much if a few of us file the information and the rest of us not do so. (Vol. I, p. 415.)

The president (Giant) said:

> It seems to me that it would be in order for us to see if we cannot stir up the southern mills, and get them to form an association along the same lines as ours and as is formed also by the western people, and we would be then, as Mr. Scott expresses it, in the position of the "Three Musketeers." (Vol. I, p. 416.)

In the same meeting, Mr. Swett (Lehigh) said:

> As to the manufacturers that are not members of this Association steps should be taken immediately to interest them in the Association and there ought to be someone delegated to attend to that. (Vol. I, p. 418.)

At the meeting of January 31, 1916 Mr. Coogan (Alpha) said that Mr. Bayle (Glens Falls) had explained to him that until such time as the status of the other New York mills was clearly defined he would not care to report his contracts. Mr. Cover (Security) stated that that was the reason why the Security had not so far filed its contracts; and that he was ready to come forward and bring everything up to date the minute the other companies joined the association and did likewise, but that was the only condition under which his company would come in at that time; and he expressed a doubt whether his company should remain in the

association under those conditions and receive its benefits; but the president assured him that his position was understood, and that they were willing to furnish his company the information without its contracts being reported. (Vol. I, p. 440.)

On March 25, 1916, Mr. Brobston (Dexter) wrote Mr. Griffith, president of the Association:

> I acknowledge receipt of yours of the 24th inst. My only idea in writing you was that it was not fair for the Nazareth Company to have reports of our contracts and credit reports if they did not reciprocate and it seems to me that they have now been given enough chance to see what the benefits of belonging to the Association will be and we, therefore, until they actively take part, think they should not receive any further reports.
>
> I am glad to note that you expect the Alsen's to come in. I think it is worth while to continue working on the Helderberg as we can get Glens Falls the minute the Helderberg comes in. We will always keep on working with Horner and trust that he will eventually come in line. (Vol. II, p. 650.)

At the meeting June 19, 1916, in discussing the relationship with the western association, Mr. Griffith (Giant) said:

> I feel it is very valuable for this Association and the members of this Association to have the information from the Western Association as there are a great many points

> the Eastern Mills ship into that are close to their mills, and we should know what is going on—what has been going on in their territory. It is the feeling of the members, we will ask them to make their report at the next meeting after the thing is definitely settled, as the Western Association has just been formed. The same committees were asked to take up with the Universal the filing of New England contracts. (Vol. I, pp. 494–495.)

At the meeting of August 21, 1916, the president told about a conference of the committees appointed by the Mid-West Bureau and the Cement Manufacturers Protective Association, in which the best methods of interchanging information was considered, and said it was decided that as soon as the Mid-West Bureau had made necessary amendments to its by-laws a conference would be arranged between the attorneys of the two associations. The following colloquy then occurred:

> The PRESIDENT: I think it very essential that all the eastern members should have the same information as compiled by the Secretary of the Mid-West Association.
>
> Mr. ISRAEL: All it requires is, that the Western Association should amend or change its by-laws, in order to give information to one that is not a member of that Association, namely, to our Association?
>
> The PRESIDENT: Yes.
>
> Mr. ISRAEL: When they have done that, then, in fact, it will be perfectly legal to exchange information?

The PRESIDENT: Yes.

Mr. ISRAEL: That will be very satisfactory.

The PRESIDENT: And they will give us sufficient copies of their contracts, credit reports, et cetera, after their by-laws are changed, so that each member of this Association shall receive same. (Vol. I, p. 501.)

At the meeting of the Credit Managers' Branch on October 16, 1916, there was read a letter from the Association's counsel in which he reviewed the objects of the two associations, and stated the result of his conference with the attorney of the Mid-West Bureau. In this letter he said:

> The arrangement made (subject, of course, to the approval of the two Associations) was that the Secretary of the Mid-West Association and the Secretary of the Protective Association should send each other a sufficient number of their respective reports in the form each Association uses for distribution to the members of the other Association. Thus, a member of the Protective Association will receive from its Secretary precisely such information collected by the Mid-West Association as a member of that Association receives from it; and a member of the Mid-West Association will receive from its Secretary precisely such information from the Protective Association as a member of the Protective Association receives from it. (Vol. I, pp. 513–514.)

At the meeting of the Credit Managers' Branch on February 19, 1917, a motion was passed to thereafter send to the Secretary of the Mid-West Association a copy of the minutes of the meetings of the Protective Association. (Vol. I, p. 522.)

On March 10, 1917, the Sales Manager of the Clirchfield Portland Cement Corporation addressed a letter to the president of the Association in which he submitted his resignation and expressed the hope "that we will be able to perfect the organization of a little Protective Association in the South next week." And he added:

> In doing this, I want to express my full appreciation of the great amount of good that is derived from membership in your organization. I want to compliment those of you who have worked so hard to perfect the organization, and to carry out the ideas that originated in the Association. I am not unmindful of the good that we have derived, and the enthusiasm instilled into me, I believe, has done more to cause the creating of a similar organization in the South than any other one thing. (Vol. I, p. 524.)

At the regular meeting of February 20, 1919, a long discussion occurred with reference to members of the Protective Association also becoming members of the Southern Association. It appeared that the Southern Statistical Bureau had sent out a circular letter in which they had requested that mills shipping cement into that territory pay them

certain dues and join the Southern Association; and the discussion related to whether the members shipping into that territory should be permitted to belong to both associations; and, if so, whether their reports to the Protective Association should be limited to sales made within its territory. Mr. Moyer (Vulcanite) said:

> I do not think it is desirable for companies having no mill located in the Southern territory to split up their statistics between this association and some other association. I would not think it would be desirable for the Vulcanite Company to be a member of the Eastern Protective Association and the Mid-West Protective Association and report to them shipments into Ohio and not report those shipments into Ohio to this association. It destroys the value of the statistics to the Eastern Association. It seems to me that protective associations are organized along the line of grouping of mills; that all mills grouped in the South or on the borders of the South are grouped into the Southern Association; those in the Mid-West in the Mid-West Association; and those in the East, in the Eastern Association, all placed along those lines. I do not think we ought to upset that plan. (Vol. I, p. 589.)

Mr. Swett (Lehigh) said that the Southern Association was "evidently going to run their association along the line we are here, checking up the contracts," and that he thought any concern that

shipped a volume down in the southern territory should belong to that association and stand some of the expense. (Vol. I, p. 589.)

At the meeting of March 20, 1919, the chairman said that at the last regular meeting the question was brought up in regard to interchanging information and statistics with a proposed association comprising the mills in the South Atlantic States, that association to be built along the lines of the Protective Association, and that he was authorized to appoint a committee to consider what dues should be paid that association by members of the Protective Association shipping into that territory, and where the dividing line should be. (Vol. I, p. 592.)

Mr. Holman (Atlas), Chairman of the Committee so appointed, stated that he had written a letter to Mr. Dickinson, a member of the Mid-West Association and Chairman of its Auditing Committee, in which he stated that if an association was formed in the South along the lines of the Protective and Mid-West Associations, one which counsel would approve and would authorize the exchange of information with, the Protective and Mid-West should contribute a sum of money towards the expense of operating such Southern Association, and allow both the Protective and Mid-West Associations to proceed without withdrawing any tonnage reported to either Association and reporting it to the Southern Association, and that

counsel had advised he would approve such an arrangement if satisfactory details could be arranged; as "such a plan would enable exchange of information among the three associations based upon no changes in the present membership." (Vol. I, p. 593.) Mr. Holman further reported that Mr. Dickinson had replied that he had presented the matter to the members of the Mid-West Bureau at their regular meeting on March 14, and that a motion had been passed authorizing the Chairman of the Bureau to enter into negotiations with the proper parties and giving him "*power to take what steps are necessary in order to secure the cooperation and coordination of the three associations, along the lines suggested in your letter*"; and that he, Mr. Dickinson, would be glad to make such arrangements as would be satisfactory to all concerned "with a view to the exchange of information between the Southern Association and our respective organizations following the formation of the Southern Association along similar lines to ours, which would meet with the approval of our respective counsel." Mr. Holman further stated that he understood that the proposal had been accepted subject to the working out of the details satisfactory to them and the Association. The Chairman then said:

> The matter seems to me to be up to the Southern Association now, as the Mid-West and our Association are apparently in

> accord in the matter, and I think it would be well for us to adopt a similar resolution to that adopted by the Mid-West and to keep this Committee intact to work out any further details with the Southern Association when it is properly formed, then we can go ahead, based upon their willingness to meet the views of this Association and the Mid-West, subject to the proper formation of their Association, which will be decided by Mr. Cox at the proper time. (Vol. I, pp. 593-594.)

The motion of the Mid-West Bureau was then read and Mr. Twamley (Coplay) said:

> I offer a similar resolution that the committee of six members that has been appointed by you be empowered to conduct negotiations along the lines suggested in the Mid-West resolution;

which motion was carried. (Vol. I, pp. 590–594.)

The minutes show no further action upon the matter; but as both the Mid-West Bureau and the Protective Association had appointed committees, with full power to act, it is a fair inference that the relationship contemplated was established with the Southern Association. *And thereby arrangements were perfected for close cooperation, and the exchange of full information with reference to the entire cement industry and the minute details of their business between nearly every manufacturer of cement within the entire territory extending from the Mississippi River to the Atlantic Coast.*

How completely members of the defendant Association dominate the industry in the eastern section of the United States is shown by Government Exhibit No. 242 (Vol. II, p. 664, side p. 1296), which was issued by the National Association and purports to give the capacities of all the mills in the United States in the year 1920. From that exhibit it appears that the mills belonging to the members of the Association have about 95% of the total capacity of all mills located in the territory covered by the Association.

VI.

CONTROL OF PRICES AND PRODUCTION (1) BY THE USE OF SPECIFIC JOB CONTRACTS, (2) BY THE ASSOCIATION'S SYSTEM OF REPORTING, AND (3) BY THE EMPLOYMENT OF CHECKERS TO SPY OUT THE USE OF CEMENT SOLD ON SUCH CONTRACTS AND DETERMINE WHETHER THE QUANTITY SPECIFIED WAS EXCESSIVE.

Before it can be intelligently discussed whether the reasons assigned in the constitution justify the Association's existence, it is necessary to know what the practices engaged in by and through the Association are, and the relationship between those practices and the cement industry. There should be kept in mind the two classes of sales heretofore mentioned, to-wit, one of cement to dealers for the general trade, which, according to Mr. Morron (Vol. I, p. 330), " they sell out in wagon-load lots, or something of that kind," and which is from 60 to 65 per cent. of the entire trade, and the other of cement to be used on special jobs. Of the latter class two-thirds or more is sold through the dealers; but for all sales, whether made through a dealer or directly to the contractor, contracts having the same provisions are used, the dealer, of course, being allowed his differential when the sale is made through him. Because cement will deteriorate

when exposed to bad weather and often when left too long in the air (Elliott, vol. I, p. 148: Morron, vol. I, p. 338), it is purchased by dealers for the general trade *only as needed to meet the immediate demand.* There is no restriction on the quantity that can be bought for immediate delivery (Lockwood, vol. I, p. 184), but the following testimony of Merriman, a dealer of Scranton, Pennsylvania, with reference to contracts for future delivery *for the general trade* is especially important:

> A blanket contract as I interpret it is a contract that provides for a certain amount of cement to be taken in a specified time, *but to be used where you choose to place it.* There was a time when I could get a blanket contract. That is several years ago. *I can't get a blanket contract from any company. They have cut out that practice of giving blanket contracts in the neighborhood of fifteen years ago. They have not been allowing it since that time.* (Vol. I, p. 176.)

In other words, while there is no restriction as to the quantity of cement that the dealer can purchase for immediate delivery, yet he cannot buy for future delivery *for the general trade;* and, as the dealer cannot keep it in storage for a substantial length of time, all cement purchased in the general trade must be bought and sold at the current market price; and the price at any time in the future cannot be affected thereby; and also, the dealer is cautious as to the quantity ordered, and there is no probability of the cement market be-

coming oversupplied. But it is entirely different with reference to cement sold for delivery six, eight, or twelve months in the future, as is done to contractors and builders and large consumers for specific jobs. (Vol. I, Kelter, p. 189.) It is necessary for a contractor to know that he can obtain the cement when needed, and also, that he may figure intelligently his bid for a job, the price he will be required to pay. As two-thirds or more of the cement shipped for specific jobs passes through the hands of dealers, in the absence of some restriction, if a dealer should believe that the general demand for cement would increase and the price be advanced, through these contracts he could contract for cement for future delivery at the price prevailing when the contract is made. And, if a substantial quantity of excess cement should thus be contracted for, the cement so obtained would come in competition with that manufactured and sold for the general trade *at such future time,* and the manufacturers would thereby lose control of the market. Therefore, as a complement to the abolishment of the blanket contract under which dealers could buy for future delivery cement for the general trade, there was introduced what is known as the specific job contract which alone is used in the sale of cement to be used on specific jobs.

SPECIFIC JOB CONTRACTS.

According to this record every member of the Association uses, in selling to contractors and builders

and large consumers for special purposes, and to dealers cement to be furnished to such customers, specific job contracts. In fact, it appears to be a custom of the trade, but precisely when it arose and why it should exist defendants do not attempt to explain. Because it does exist, it is assumed to be entirely proper; and then it is further assumed that any conduct is legitimate that is necessary to control, or helpful in controlling, the production and price of cement by taking every advantage of the exact terms of the contract.

Special attention is given to trade practices by the National Association; and that organization is largely responsible for the adoption and maintenance of many uniform practices. In Government Exhibit No. 243 (Volume II, following p. 664), a pamphlet entitled "Trade Practices in the Cement Industry," published in January, 1919, on pages 9 and 10 appears the following under the heading "Contract Form for Dealers' Use":

> Great demoralization results from the ability of dealers to place orders with manufacturers for large amounts for deferred delivery upon the representation that the cement is for specific work which the dealer has sold, all or part of which has in reality not been sold by dealer for such work. In such a case the cement is later sold by dealer from time to time when the market has advanced at a price lower than warranted by the manufacturers' current prices to such dealer and lower than other dealers in the

same town can sell at, based on manufacturers' prices to them for current requirements. This results in demoralization to the detriment of all manufacturers concerned in the market affected—the manufacturer who has such an unspecific contract delivering cement at prices below prevailing market prices, and the manufacturers who are trying to sell through other dealers being unable to secure business because of the disadvantage under which such dealers are placed in competition with the dealer who is being supplied by the other manufacturer at price below prevailing market.

Urging dealers to place orders for extended delivery for specific work, and permitting such dealers, at their option, to take more or less cement on such orders than actual quantity used in the work, *has been one of the most objectionable devices and practices known, and has done more than any other one thing to bring about demoralization.* This practice is closely akin to to " guaranteeing prices against decline ", and no good or wise merchant ever resorts to such practices. If a contract is made it should be a fair one and its terms observed by both parties.

No specific work contract should be made that is not bona fide, and such a contract should cover the quantity of cement used in the particular job described—no more, no less; and any change in the market during the period of the contract should not affect

the price named in the contract. All specific work contracts with dealers should be in written contract form, and dealers should be required to report monthly their deliveries thereon. These suggestions, if consistently followed, will prevent padding of contracts and the loss and demoralization resulting therefrom.

If all manufacturers insist that every specific work contract with a dealer have attached thereto an executed copy of contract between the dealer and his customer for that particular work, it will largely eliminate the abuses recited.

For these reasons the attached form of dealer contract should be adopted and its use by dealers insisted upon and executed copy of the dealer contract be attached to the manufacturer's specific work contract with that dealer in every case. The manufacturer, of course, when he has any reasonable doubt of the existence of the specific work mentioned, should make a thorough investigation to disclose the fact or establish with certainty that the quantity in the dealer contract is correct. (See Form No. 5.) (The italics are theirs.)

To this pamphlet there were attached a number of forms, the fourth of which was a suggested form for "Specific Work-Sales Contract." This form contained the following clause:

in consideration of the price and subject to all the terms, conditions and limitations set forth on this and the reverse side hereof,

which it is hereby mutually understood and expressly agreed are a part hereof, SELLER hereby sells and agrees to deliver, and the BUYER hereby purchases and agrees to receive and pay for approximately barrels of " IMPERIAL " Portland cement, at a price of $ per standard bbl. in 4 cloth sacks, in carload lots, f. o. b. cars , to be used in the following described work, and shipped between the date hereof and , 191 .

DESCRIPTION OF WORK

This contract is intended to, and does, within the limitations hereof, cover the entire quantity of Portland cement which BUYER shall, during the time herein specified, furnish or use in the work above described.

The amount of Portland cement required for the said work is estimated by BUYER at barrels, but nothing herein contained shall obligate SELLER to furnish hereunder more than the quantity of " IMPERIAL " cement actually furnished by BUYER for, and used in, said work. (Vol. II, p. 664, G. E. 243, Form 4.)

The fifth form was " Contract Form for Dealer's Use " and contained the following clause:

Quantity: This contract is intended to, and does within the limitations hereof, cover the entire quantity of Portland cement, which BUYER shall, during the time herein speci-

> fied, use in the work above described, estimated at _____ barrels, but SELLER is not obligated to furnish hereunder more than the actual quantity of " IMPERIAL " cement actually used during said period in said work. (Caps and italics theirs.)

The section above quoted appeared in the "Trade Practices" published in 1916, and forms containing the same clauses were attached thereto; and a similar section, but not in the exact words, was in the Trade Practices published in 1915, and to it were attached forms containing the same clauses. (Gov. Exhibits 244 and 245, Vol. II, following p. 664.)

The above quoted clauses or their equivalents are used in all of the defendants' specific job contracts. Under those contracts it is not at all improper for the purchaser to obtain and the manufacturer to deliver more cement than is necessary to complete the job described, or for cement to be delivered and accepted for use on some other job. It is simply provided that the seller is not "obligated" to furnish more than the quantity necessary for the job.

The attitude of the defendant manufacturers towards their dealers and other customers, as indicated in this record, is, to say the least extraordinary. It is hardly believable that it is real. To so believe is a greater reflection upon them than to believe that it is merely pretended for the purposes of this litigation. The pretense is that their cus-

tomers have no proper sense of honor in respect to their contractual obligations; that they will observe their contracts, if it be to their interest to do so, but, if otherwise, they treat them as mere waste paper. And they would have it believed that those who purchase cement are so financially irresponsible that a contract can not be enforced against them. Therefore, throughout the record contracts with dealers and contractors are spoken of as one-sided—perfectly good as against the manufacturers, but worthless as against the purchasers. And it is assumed as an incontrovertible fact that the purchaser perpetrates a fraud upon the manufacturer if he manages to *procure and pay for* more cement on a contract than is used on the job described. That is, if a contractor happens to be engaged in building at the same time a schoolhouse and a churchhouse, and obtains some cement under the schoolhouse contract and uses it in the construction of the churchhouse, he has perpetrated a fraud upon the manufacturer, *though he pays for the cement the contract price.* It is to protect the manufacturers against such frauds as that, and to prevent them from being defrauded in a similar manner by a dealer or contractor making contracts to procure cement for the same job with more than one manufacturer and thus procuring more cement than is sufficient to complete the job, that they have organized the elaborate system operated by the Association.

The contract for future delivery generally used in commercial transactions obligates the seller to deliver, and the purchaser to accept the goods at the time, place and price specified. If either party breaches the contract, he is liable to the other in damages. There is nothing in this record to indicate, and there is certainly no reason why the court should judicially assume, that the dealers in building materials and the contractors who construct the great highways, bridges, tunnels and buildings which touch the sky are financially less responsible than those who engage in other lines of business. Then there must be some special reason why cement manufacturers uniformly use this specific job contract, and are so anxious to see that no cement is delivered thereunder other than the quantity necessary to complete the work described.

As above explained, *that reason is, if dealers could procure cement for the future general trade at current prices, the cement so obtained would come in competition with that manufactured and sold in the general market at such future period. Therefore, the object of the specific job contract and its strict enforcement is to enable the manufacturers to retain absolute and continuous control of the market.* Succinctly stated, therefore, *the principal excuse assigned for the existence of the Association* is to enable the manufacturers to prevent the users of cement from obtaining a greater quantity, though paid for, than is necessary to meet their actual current needs. *And the primary object intended to be accomplished was to pre-*

vent the delivery of more cement under a specific job contract than is necessary to complete the job described, thereby enabling the manufacturers at all times to control the price of cement, and by exchange of information and intimate association to prevent competition among the manufacturers as to its price.

Let us see if the defendants are not entitled to a grade of 100 in the accomplishment of this purpose.

Reports as to Sales on Specific Job Contracts and Production and Shipments.

The exchange of information relating to production and shipments of a commodity, and especially to sales and prices at which made, is one of the most efficient means of regulating production and advancing and maintaining prices, and one that is used by all open-price associations.

It is doubtful whether any more complete system of reporting could be devised than that used by defendants.

The following are the forms used for reporting specific job contracts, production of clinker and cement, and shipments of cement. They are fully explained by Miss Phalen, Secretary of the Association in Volume I, pp. 154–161, of the record. For convenience of inspection the more important ones are reproduced:

Form #20.—Used by manufacturers in reporting to the Association full data concerning specific job contracts.

Form 20

From ..... 192..

Contract No. ..... Dated ..... 192..
Purchaser .....
Address .....
Work, as described on the back hereof .....
Location .....
Contractor .....
No. bbls. ..... Price ..... Del. pt. .....
.....
Date of Exp'n .....

Give full and complete description below of the work, viz.—if a building give dimensions, character of construction, etc. If paving state what kind, giving yardage, thickness, mix, etc. Give exact locations and make description specific. (Gov. Ex. 14, vol. 1, p. 360.)

Form #21.—Used by manufacturers in reporting to the Association changes made from time to time in specific job contracts previously reported on Form #20.

Company — Form 21
Contract Number — Date
Delivery Point

1. Completed [ ]
2. Canceled ..... Bbls.
3. Decreased ..... Bbls.
4. Increased ..... Bbls.
5. Leaving balance due ..... Bbls.
6. Date of expiration extended to .....

(over)

Instructions

First—Whenever entire amount of contract has been *shipped*, check only (v) in space opposite "Completed" (line 1).

Second—If entire amount due on contract is cancelled enter number of barrels canceled on Line 2.

Third—If portion of contract is canceled, state number of barrels cancelled on Line 3 and balance still due on Line 5.

Fourth—If amount of contract is increased state number of barrels of increase on Line 4 and balance still due on Line 5. (Gov. Ex. 15, vol. 1, p. 360.)

Form #7.—A *daily* report compiled by the Association from data reported on Form #20 and distributed to its members showing the contracts obtained by each member, the purchaser's name and address, the point of delivery, a description of the work, the brand of cement purchased, the delivered price, and a symbol indicating the nature of the job on which the cement is to be used. (Gov. Ex. 16, p. 360, Side p. 654.) See folder opposite.

Form #8.—Compiled *daily* by the Association and distributed to its members, showing the number of new contracts received as of that day and to date from the first of the month, the number of barrels ordered as of that day and to date, the number of contracts canceled as of that day and to date, the number of barrels canceled as of that day and to date, reinstatements and increases as of that day and to date, and the decreases as of that day and to date. (Gov. Ex. 17, p. 360, Side p. 655.)

Form #22.—Used by manufacturers in reporting to the Association at the end of each month a list of all active specific job contracts, showing the balance due in barrels at the end of the previous month and the balance in barrels remaining due at the end of the current month. (Gov. Ex. 23, vol. 1, p. 364, Side p. 662.)

Form #13.—Issued monthly or quarterly by the Association to its members and showing as to each of the member-companies its percentage of committments on a given date as compared with shipments for the past 12 months. (Gov. Ex. 24, vol. 1, p. 365.)

Form #9.—A monthly summary and cumulative report of information distributed daily by the Association on Form #8, showing as to each member the new contracts, contracts canceled, reinstatements and increases, and decreases during the preceding months of the current year. (Gov. Ex. 25, not printed, but see Gov. Exs. 405–428, vol. II, p. 706. Side pp. 1463–1468½.)

Form #10.—Quarterly report by Association of all specific job contracts on file with member companies, showing name of contractor, delivery point, full description of work, brand sold, date contract was closed, date of expiration of contract, number of barrels sold, price at which sold, the quantity shipped since last report, total shipments to date, and the balance to be shipped. (Gov. Ex. 26, vol. 1, p. 364. Side p. 665.)

Form #11.—Issued by the Association monthly and showing by States the commitments of each company, in barrels, and the total commitments of each company. (Gov. Ex. 27 not printed, but see Ex. 429, vol. II, p. 707, side p. 1469–1471.)

Form #23.—Used by manufacturers in reporting monthly to the Association the quantity of clinker produced, cement ground, cement shipped, clinker in stock, and cement in stock. The importance of this report warrants its reproduction here:—

19 West 44th Street,
New York, N. Y.

(Gov. Ex. 28, vol. 1, pp. 365–6.)

Form #12.—Summary report issued monthly by Association based on reports made to Association by members on Form #23 and showing as to each member the quantity of clinker burned, cement ground, cement shipped, clinker in stock and cement in stock, etc., and showing the percentage of increase or decrease as compared with similar months and periods in the preceding year. This report also shows the number of barrels shipped by one company for the account of another company. *It is impossible to adequately describe this form, and it is too complicated to reproduce here. It must be seen to be fully appreciated.* (Gov. Ex. 34, vol. 1, p. 366. Side p. 679.)

Form #30.—Issued monthly by Association and showing by chart or picture the same information shown in figures by Form #12. (Vol. 1, p. 161.)

Form #24.—Used by manufacturers in reporting to the Association semimonthly their total shipments, both on specific contracts and to dealers (Vol. 1, p. 159), during the preceding 15 days, and also showing for the purpose of comparison the quantity shipped during the corresponding period of the preceding year. (Gov. Ex. 57, vol. 1, p. 367.)

Form #14.—This is a summary report issued by the Association, compiled from information received upon Form #24, showing comparatively the total shipments by each company during 15-day periods during the current year and the preceding year, and the percentage of increase or decrease in the shipments of each member. (Gov. Ex. 58, vol. 1, p. 367.)

Form #31.—Issued monthly by Association and showing by chart or picture certain information reported on forms Nos. 15–18. (Vol. 1, p. 161.)

Form #28.—Issued quarterly by the Association to its members and analyzing contracts to show commitments and shipments on various classes of construction by States, total shipped to date and the unshipped balance. (Gov. Ex. 67, vol. 1, p. 371. Side p. 709.)

On behalf of defendants special attention is called to the fact that the reports of sales do not include those made to dealers for the general trade; and Miss Phalen testified on cross-examination that—

> The activities of the Association in connection with contracts are limited strictly to these specific job contracts, and the Association has nothing to do with other transactions of the manufacturer, nothing to do with three-quarters of his business during 1920, and more than two-thirds of his business during 1921. (Vol. 1, p. 162.)

The reports relating to production and shipments include *the entire output of the factories, and the information upon those subjects is complete.* One of the most significant circumstances in this record is the fact that sales to dealers for the general trade were not reported. Such reports were wholly unnecessary. They would have added nothing to the members' knowledge. The price to the dealer was perfectly well known, because they had a uniform differential between his price and the price to the contractors. A number of dealers were examined, whose testimony will be hereafter cited, and it was not suggested by them, nor is it intimated anywhere in the record, that there was any variation in prices to dealers independent of the little variations claimed at times in prices to contractors. Possibly in an instance or two, under special circumstances and with a warning to keep it secret, a slight shade was given a dealer, but those slight discriminations related to specific job contracts. In fact, a dealer generally, if not always, sells the product of more than one manufacturer. **That the reports of sales under specific job contracts was equivalent to reporting prices to dealers is shown by the following discussion which took place at the meeting of March 20, 1916:**

> Mr. DUTTON (Coplay): I would like to make a suggestion: In our reporting of these contracts here I do not believe at the present time, as Mr. Cox said the way it works out,

that we have any right here to discuss here as to whether we are going to quote a man as a dealer or simply some other way, and I do not think it would be in harmony. I think that we should simply report these contracts as sold to a dealer or contractor and leave it wholly on the company who is doing the reporting to specify it as they saw fit. *they could very easily take these contracts and check them up if they chose and ascertain that fact.* I had several inquiries from parties as to whether such and such a contract was with a dealer or whether it was with a consumer. As it is, if you want to find out, you have to write a special letter about it to check the matter up and that becomes a matter that takes a lot of time, if you want to go through these 38 pages of contracts here and find out about very many of them.

The PRESIDENT (Giant): Is not that the answer, in view of the fact that you have been able to get that information during the last three months on those that have been reported on that method of inquiry. *It seems to me that a simple look at the price would answer your question there without very much trouble, if you see whether the price was at $1.05 or $1.10, wouldn't that answer your question?*

Mr. DUTTON: Still it is an easy matter to take from your own information and report on your own contract and say whether it is a dealer or a consumer by putting a D or a C after it, that would clear up the whole

situation at once, as to how you considered it, and that would save any question unless one wanted to go into the matter further.

Mr. COVER (Security): It would be a good way of getting an expression of how each member regarded his contract, whether he regarded them particularly, in each particular instance as a dealer or not.

The PRESIDENT: *Would not that show by the quotation itself, Mr. Cover, as to what price it was quoted at without saying whether he was a dealer or a consumer?*

Mr. ISRAEL (*Coplay*): No, Mr. Chairman, as the price does not always remain the same, and there is no such thing as a uniformity of price *owing to the changes of freight rates and distances of delivery.* But as a matter of record of each individual case, I cannot say, unless Mr. Cox finds objection to it, but in the matter of reporting the contracts to the secretary, if we will state if the purchaser is a dealer or contractor, that is all we have to do. (Vol. 1, pp. 462, 463.)

Therefore, as there was a fixed relationship between the price to the dealer and the price to the consumer it was not worth while to incur the enormous additional work and expense necessary to report the sales made to dealers for the general trade.

The forms above quoted and described show that each member had continually in his possession every detail of its competitors' business, in so far as it related to production of clinker and cement,

shipments of cement, the quantity under contract for delivery in the future, and when, where, to whom, and at what price it was to be delivered. Let it be assumed, as claimed by defendants, that it is a fraud upon the manufacturer for a dealer or builder to obtain more cement upon a contract than he would need for the specific job described. Yet the information necessary for the prevention of such fraud would be nothing more than a description of the contract sufficiently full to enable it to be identified; and it would certainly be sufficient to state the name of the purchaser, when and where the cement was to be delivered, the quantity sold and in what kind of a job it was to be used. That information would enable a member to examine his contracts and ascertain whether he had one for the same job, and also would enable it to be ascertained from inspection whether too much cement had been contracted for. But the members of the Association are not content with that information. *It is required that the exact price for which the cement is sold be reported.* The price certainly has nothing to do with the identification of a job unless they all agree to charge the same price for cement delivered at the same place. But the excuse for requiring the price to be reported is thus stated in the constitution:

> The second form of misrepresentation is illustrated by the common experience of every manufacturer of Portland cement with statements made to him *not only by dealers*

> *but often by his own salesmen* concerning competitor's practices, with the result that the manufacturer is deceived and imposed upon. (Vol. I, p. 354.)

In other words, *the manufacturers' dealers, and even their own salesmen, are of such character that they cannot be believed;* and to protect themselves against misrepresentations by them as to members' prices and practices the manufacturers must combine *and tell each other what their prices are.* This same excuse is offered by all associations which practice an exchange of prices. It is based on the assumption that the members of the Association are immaculate, while those with whom they deal are dishonest. There is no combination among the customers by which they can be protected against misrepresentations of the members of the Association as to their supposed competitors' prices. It is just as easy and as common for one who is selling an article to misrepresent to the customer his competitors' prices as it is for the customer to make such a misrepresentation. Is there any reason why it should be assumed that the one will not speak falsely while the other will? In fact, the claim that a manufacturer of cement can be so deceived as to prices at which his competitors are selling is flatly contradicted by another defense made as to the practice of exchanging prices. They say that the reporting of prices is of no value whatever, because the reports are out of date when received, the prices of their competitors having

long before been ascertained by 'phone or otherwise. It is, no doubt, a fact that the members of the Association are informed of every change in the price at which another member is selling through their dealers and salesmen before they receive information of such change through the reports. *But the real object of the confidential exchange of prices at which sales are made is that, through the moral effect of such knowledge, the prices may be enhanced when the market is favorable and maintained when unfavorable.* Mr. Morron, the only defendant in the criminal case who went upon the witness stand, unconsciously explained on cross-examination the exact effect of this exchange of prices. He said:

> The question of price in those reports did not mean anything to us at all, so far as the specific job contracts were concerned, because we got our prices from the dealers, as I told Colonel Stimson. But I was glad to have the prices of specific contracts reported on that sheet for the purpose of checking up our own salesmen, to find out whether we were losing business because they were not good salesmen or because of the fact that they misrepresented conditions to us and told us somebody was cutting the price.
>
> *I would feel very much ashamed to have to sell cement at less than anybody else. I did not want to do it, certainly not. I should hate to think that we were spending hundreds of thousands of dollars in advertising and building up the business of the*

Atlas Company, and then have to sell, because of lack of ability of the President, for less than the same kind of commodity was being sold for. As to whether my competitors felt the same way, you cannot ask me about my competitors because I don't know. (Vol. I, p. 338.)

THE IMPORTANCE ATTACHED BY THE MEMBERS TO REPORTING EXACT PRICES AND FILING THE REPORTS PROMPTLY, AS SHOWN IN THE DISCUSSIONS IN THEIR MEETINGS.

At the meeting of January 31, 1916, the president (Giant) said:

> This is another thing I want to take up with you gentlemen, the question of reporting price. Some of you have been reporting the delivered price, others the mill price, and I think the simplest way would be for the companies to report the actual delivered price, including freight and everything. (Vol. I, p. 433.)

At the same meeting Mr. Cover (Security) in the course of a statement explaining why his company had not filed its contracts, said:

> I stand ready to come forward and bring everything up to date the minute the other companies join the Association and do likewise * * *. (Vol. I, p. 440.)

At a meeting of April 17, 1916, Mr. Cover (Security) brought forth *applause* from the members by announcing that—

> I want to make a statement now that beginning the first of next month we will re-

> port our contracts irrespective of what anybody else does. (Applause.) (Vol. I, p. 475.)

At the meeting held February 28, 1916, Mr. Brown (Alpha) stated:

> * * * we ought to have that statistical information back into our hands summarized not later than the 5th of the month or the 6th, the furthest. (Vol. I, p. 447.)

In the course of a discussion concerning delay in making reports to the Association, Mr. Twamley (Coplay) stated at a meeting of April 17, 1916:

> Suppose we *fine* them if they do not have their report in by the 5th. In that way you will have them all in. (Vol. I, p. 475.)

At the same meeting, in the course of a discussion of the subject of exchanging reports, Mr. Erdell (Penn-Allen) stated:

> We told the president that if the Association continued to send reports to people who did not furnish reports, we would discontinue sending our reports. (Vol. I, p. 474.)

At a meeting of December 15, 1916, Mr. Smith (Lawrence) said:

> The purpose of these daily reports is to give information to each other, and if we hold up the reports unnecessarily, that is bad faith, and I am sure no member is attempting to act in bad faith. (Vol. I, p. 520.)

At a meeting of March 18, 1920, Mr. Goode (Hercules) made this very illuminating observation:

> I think now is really the time for every company to know exactly and accurately what the commitments are. (Vol. I, p. 605.)

It was important to know at that particular time just what the commitments of every company were because the manufacturers anticipated higher prices, and they desired to keep in close touch with supply and demand. Their anticipations were realized and in the following July, 1920, the peak of high prices in the cement market was reached.

At the meeting of September 23, 1920, Mr. Dutton (Bath) said:

> Our real object is to see the commitments of all manufacturers. If this report is of value if issued every three months, I think it is of value if issued every month. (Vol. I, p. 609.)

The information contained in these reports was also confidential, intended for the exclusive use of the members, and was not to be divulged to dealers and contractors. Thus at the meeting of January, 1921, Mr. Naylor (Knickerbocker) said:

> All of these statistics are supposed to be confidential, are they not?
>
> The PRESIDENT (Pennsylvania): I do not think they are necessarily confidential.
>
> Mr. NAYLOR: I mean that they are confidential as among the manufacturers; not to be given out to customers. (Vol. I, p. 625.)

Checkers

Checkers are really spies, but by the use of that term no reflection is intended upon those who were employed in that service. It is assumed that the purchasers are endeavoring to obtain more cement than is necessary for use on a specific job, and sometimes it is supposed that there is some excess cement in a locality, and these employes are sent there *to spy out and check up* the situation.

Before the Association was organized, each company looked after its own contracts; and when first organized no provision was made for such agents. It was supposed that if each manufacturer had before him all the contracts of his competitors, he could readily look them over and ascertain whether any of his contracts were duplicates; and, if a duplication was found, it could be arranged between them which would cancel. How the employment of checkers came about and the nature of their activities, is shown by the minutes of the Association meetings and certain correspondence in the record. At the meeting of the sales managers' branch on March 20, 1916, the employment of some one to investigate contracts was suggested by the president (Giant). (Vol. I, p. 467.) At the meeting of July 17, 1916, it was said that at " a little informal gathering " several gentlemen had talked upon that subject, and that it was suggested that the Association have a man at New York to go over the information and find out what jobs were actual

and specific, " it being generally believed the best time to cancel a contract or get out of a phony contract is just before entering into it instead of going through all this terrible rigamarole through two or three months, possibly getting into complication with the dealer." (Vol. I, p. 499.) On October 30, 1916, Mr. Scott, of the Edison Company, wrote the President of the Association recommending the immediate employment of six persons to check over contracts listed and that they begin work immediately. The reason assigned was that " regardless of advanced selling prices which may be created, in view of the constantly increasing cost of manufacture; for the very reasons set forth in the articles of incorporation of our Association, *the cement market will be controlled not by actual costs of manufacture, or supply and demand, but instead by the contracts which have been written in the past few days.*" (Vol. I, p. 371. Side p. 710.)

Acting upon Mr. Scott's suggestion, the president, Mr. Griffith, wrote the secretary, giving him a form of letter which he desired to be addressed to the several members. (Vol. I, p. 371. Side p. 711.) To this letter nine replies were received, all of which were favorable except Mr. Ward, of Knickerbocker, after stating that any action the majority of the Association desired to take would be satisfactory, said:

> * * * but I desire to go on record that I do not think the contemplated action is

> either necessary or advisable. In my opinion, each company can check and correct its contracts to better advantage than any one else, and if they have not the inclination to do this, any checking which might be done would be valueless. (Vol. I, p. 371. Side p. 712.)

And the Cayuga Company replied:

> It certainly appeals to us that the sales managers of the various companies should know conditions well enough to know when their own salesmen were padding contracts. You know as well as we do that some of the companies have maintained a complete investigating corps outside of the regular selling force for the compilation of figures they desire to get on the different contracts reported.
>
> * * * * *
>
> *It looks to me as though some of the manufacturers did not have confidence in some of the others, and it is for this reason that we vote against the resolution.* (Vol. I, p. 371. Side p. 713, 714.)

On November 17, 1916, the committee of the Association, appointed for the purpose, addressed a letter to the Association suggesting that they be empowered to employ F. W. Dodge Company to make such investigations. (Vol. I, p. 371. Side p. 722.) This request was granted, and at the meeting of December 15th a report was made by the committee. The secretary made a statement of what the Dodge Company had done. He said they had sent 2,200 requests for investigation to the company, and they had received 800 reports, and up to that

time the cancellations due to those reports amounted to about 86,000 barrels. (Vol. I, p. 519.) The matter of employing permanent checkers was again discussed at the meeting of June 18, 1917; and it was suggested that the officers get in touch with the Mid-West Bureau and ascertain how they were handling the matter. (Vol. I, p. 529.) At the meeting of July 16, 1917, a report of the committee appointed to visit the Mid-West Bureau was heard; and the fraudulent conduct of purchasers in endeavoring to procure and pay for more cement from the manufacturers than called for in their specific job contracts was reviewed at length; and it was reported that the Mid-West Bureau was handling the matter by employing special checkers. And it was said that—

> In the Mid-West Bureau this service has proved of value in curtailing to a large extent all the species of abuses which depend on misrepresentation as to specific job contracts, not only "duplication" but also "padding contracts," "shipments on dead contracts," and "diversion on contracts." Vol. I, p. 533.)

It was recommended that a committee be appointed, empowered to employ an inspection manager and a sufficient number of checkers. A motion was passed that a committee be appointed to make up an estimate of cost, and that the plan be submitted to the executive heads of the companies for a vote by letter. The ballot was taken and all members voted in the affirmative. (Vol. I, pp. 372–374.)

In a letter prepared by the committee and addressed to the members (Vol. I, pp. 541–543) a general suggestion as to forms to be used was made; and the forms subsequently perfected and in use when the petition was filed are as follows:

Form #1—Used by manufacturers in calling the attention of the Association to specific contracts taken by other manufacturers concerning which they desire further information:—

Form 1

Date _____

Cement Manufacturers' Protective Association
19 West 44th Street, New York

Gentlemen:

We desire to call attention to specific contract No. _____ for _____ Brand of Cement for _____ barrels sold to _____ for delivery at _____ with remarks as indicated by check marks herein.

(Check)

_____ 1. This contract appears to be a duplication of _____ Company's No. _____

_____ 2. We believe that if this job is investigated it will be found that the amount contracted for is more than the quantity required.

_____ 3. We know of no such work under construction or contemplated.

_____ 4. The construction work covered by this contract was completed _____ months ago.

_____ 5. We are informed that the company shown as the contractors on this work have never been awarded a contract.

_____ 6. We are informed that the work in question has been indefinitely postponed, for the reason that _____

_____ 7. We have reason to believe that cement under this contract is being diverted to other work.

Yours truly,

(Gov. Ex. 18, vol. I, p. 361.)

Form #2.—A combination form used by the Association in apprizing its checkers or auditors of the particular contract to be investigated, and by the auditor in reporting the result of his investigation:—

Form 2

BUILDINGS

No. _____ Brand _____ Delivery Point _____
Description of Work _____
_____
Location _____ St. and No. _____
Contractor or Owner _____ Architect _____
Purchaser _____ Total Am't of Contract _____

Has the above contractor been awarded this work? _____
Has work started? _____ If so, when? _____
Is foundation in? _____ Is superstructure started? _____
How many floors are completed[_____
How many floors to be finished? _____
How much cement did each floor take? _____
Give d mensions of building _____
What kind of construction—steel, reinforced concrete, etc. _____
How much cement does contractor say he has used? _____
How much more cement does contractor say he will use? _____
What other brands are being furnished for this work? _____
If work has not started state date it will go ahead _____
Estimate date of completion _____
Is any of the cement under this contract to be furnished to subcontractors? _____
How much cement dealer's books show has been used? _____
Source of information_____
Remarks _____
_____
_____
Date _____ Signed _____
This Form is to be used by the Auditor on the Work.

(Gov. Ex. 19, vol. I, pp. 361-2.)

33562—25——8

Forms #5, #5–a, and #5–b.—Used by the Association in submitting to its members the results of the investigation of specific job contracts by the auditor or checker. (Gov. Ex. 21, vol. I, pp. 363–4.)

Form #6.—Used by manufacturers in replying to Form #5 and containing spaces in which manufacturer may indicate (1) whether he considers the report correct; (2) whether he is making further investigation; (3) whether he desires the Association to make further investigation, and (4) the additional information the manufacturer desires the Association to consider. (Gov. Ex. 22, vol. I, p. 364.)

As shown in the letter addressed to the members (Vol. I, p. 541), the investigation of contracts was carried on under the direction of Mr. Gaines, Vice President of the Association; and he appears to have handled it with much diligence and success. The discussion at the meeting of March 18, 1920 (Vol. I, pp. 603–605) indicates the importance attached to this work by the members. And Mr. Hulsart, who succeeded Mr. Gaines, at the meeting of April 29, 1920, stated that the number of investigations made in 1919 averaged 59 per month, while for the months of January to April, 1920, the average was 90 per month. (Vol. I, p. 606.) An extended discussion of the subject was had at that meeting. At the meeting of October 21, 1920, Mr. Hulsart reported that during the first four months the average contracts investigated averaged 100 per month,

but that it had increased to 297 in September, the total number investigated up to that time being 1,838; and that the investigations so far made showed an overestimate of 2,152,000 barrels of cement. (Vol. I, p. 611.) It appears that by that time it had become a race of wits between the manufacturers and the consumers of cement, the latter exercising every ingenuity to procure a little more cement than was actually necessary for the jobs described, and the manufacturers using the ingenuity of both themselves and six paid agents in their endeavor to defeat the efforts of the purchasers, and keep all free cement from the market.

The correspondence between the manager and the checkers and between the manager and the members of the Association indicates the character of the work in which the checkers were engaged, and how they were expected to carry it on. On November 10, 1917, the manager, who was also the vice-president of the Association, wrote Mr. Norton, a checker, as follows:

> We are always especially interested in knowing what brand of Cement is used on the job which you visit. And we also like to have as fully as possible, the report of your conversations with the source of your information; as oft-times details that may seem of small importance to you, are of vital importance to us. (Vol. I, pp. 378–379.)

How the checker was expected to treat the information obtained is indicated by the following

letter dated May 20, 1918, directed to the three who were then employed:

> We are sending you under separate cover a copy of the monthly contract report, which you are to use for your personal information in auditing contracts.
>
> Please bear in mind that *this information is absolutely confidential* and that you should not under any circumstances divulge to any dealer, salesman or any other person, any information contained in this report.
>
> You are likely to be asked by some dealer or contractor to tell him something about some other contracts in his immediate vicinity and ask you to get this information from this report, but under no circumstances should you do so. (Vol. I, p. 387.)

The length to which the checker was to go in obtaining information is shown by letter dated August 20, 1918, addressed to Mr. Broomall, as follows:

> I have a report that C. J. Domsohn & Co. who are dealers, had been buying cement through another dealer in that town at a lower price than the manufacturers can sell in that market. Understand he bought three cars last month. Before you start investigating the two contracts I am sending you, and before you make yourself known in the town, wish you would try to find out what this brand of cement is, *as there is no question in my mind but that some dealer there is taking advantage of the manufacturer and*

drawing cement on contract for resale instead of putting it on the contract covering the purchase of same.

They are no doubt loading cement out of their warehouse from time to time, and if you are not able to get into the warehouse easily, if you would hang around the vicinity of the yard until some cement goes out on a truck, by following the truck you would have no trouble in finding out what brand of cement was delivered from the warehouse.

This is the kind of a job I do not like to have anything to do with, but these are extraordinary times and this seems necessary now. (Vol. I, p. 388.)

And also from the following parts of a letter dated August 31, 1918, addressed to Mr. Norton:

I have information to the effect that the dealer in this case is selling Edison cement in New Bedford at less than the present dealer's price, and what I would like to have you do is to investigate this contract from the city end first, and *without making any more noise than possible* get all the information you can before you go to the dealer. It is more than likely that the dealer will refuse to give you any information, or in case he does, it is liable to be faulty, therefore you should be on your guard and be as careful as possible in verifying everything in connection with this contract.

In the future we are not going to have much trouble along these lines, as the situation is changing, in accordance with another

> letter I am writing you explaining the situation fully, but on many of these old contracts *where the dealers have been stealing cement,* we are going to have to do some clever work in turning up the facts, and it is a matter of great gratification to know that I am able to depend upon you entirely in such matters. (Vol. I, pp. 388–389.)

With all their diplomacy the checkers could not avoid trouble with the purchasers and also with some of the members, as shown by correspondence begun by a complaint of the Vulcanite Company with reference to something that Mr. Norton was supposed to have said to the Sears Lumber Company, one of the Vulcanite's customers. After considerable correspondence had passed between Mr. Norton and Mr. Hulsart, who was then manager, and Mr. Hulsart and the Vulcanite Company, it ended in a mild reprimand administered by Mr. Hulsart to Mr. Norton. (Vol. I, pp. 390–394.) Similar complaint seems to have been later made by the same company with reference to some remarks made by Mr. Norton on another occasion which ended by Mr. Hulsart stating in his last letter to Mr. Norton:

> I wish also to again remind you of the very great care that all of our auditors must use in avoiding subjects in interviews that may be misquoted, misinterpreted or lead to inferences not intended by the auditor. (Vol. I, p. 400.)

It would be supposed that when each of two competitors had a contract to furnish cement for a certain job friction would arise between them as to which one of the contracts should be canceled; but there is no evidence in the record that any such friction ever existed. And the willingness of the members to cancel contracts is shown by some of the discussions which occurred in their meetings. and by communications and reports made to the Association. Thus, in the meeting on March 20, 1916, appears the following:

> Mr. SWETT (Lehigh): Certainly. For instance, if I have a contract for one thousand barrels of cement and the secretary calls my attention to this contract stating that he believes that it is a duplication and not a bona fide contract and I, upon investigation find that such is the case, I cancel the contract and I so advise the secretary and then the secretary in turn advises all the members of the action that I have taken.
>
> The PRESIDENT (Giant): Some of them don't seem to want to cancel some of these contracts.
>
> Mr. SWETT: That is the trouble, that is what I am trying to bring out. I am not making any complaint about the manufacturers that do take steps to investigate their contracts, it is those that do not take steps to investigate their own contracts. The fact that any competitor of mine called my attention to a contract that did not look quite right or the proper way, I would say now

that I would not stop at any expense to investigate it thoroughly. If the contract was so, that I found the contract was not proper, I would take steps to cancel it. I think we should all do likewise if we want to get anywhere. That is the purpose of this Association. (Vol. I, p. 465.)

The discussion was further extended when the following occurred:

Mr. ERDELL (Penn-Allen): I think without doubt that very shortly one or the other of the companies will cancel their contract. We have all said that between ourselves, and as soon as Mr. Griffith raised the question this month and wanted to have the thing cancelled before the end of the month, I took it up very vigorously to see if there was not some arrangement could be made and either one or the other cancelled it. If our cement does not go on the job, I shall cancel our contract immediately.

The PRESIDENT: *That is the spirit gentlemen. That is the way to do it.*

Mr. ERDELL: *I will tell you what we will do, we will cancel our contract as far as it comes here it ceases, it goes off of there.*

Mr. SWETT: Let it stay on, it would be better.

Mr. GILKYSON (Phoenix): It is entirely up to the Association.

The PRESIDENT: It is the understanding that who ever gets the job, the other will cancel.

> Mr. GILKYSON: The only danger I see on that particular job is that this cement is asked for through a dealer; *and I am afraid that dealer will misuse some of that cement; if it is left up to him.* (Vol. I, p. 466.)

On March 17, 1916, the sales manager of the Vulcanite Company wrote the Association requesting that several contracts of the Dexter Portland Cement Company for the delivery of quantities of cement at Manchester, Connecticut, be investigated, and closed his letter with the following paragraph:

> All of these should be canceled in order that the manufacturer may be protected *and the market of Manchester and South Manchester not disturbed.* (Gov. Ex. 354, Vol. II, pp. 698–9.)

On March 31, 1916, the Secretary of the Association wrote the Knickerbocker Company:

> I have your favor of March 30th, in regard to notifying members of the Association that you have canceled 5,000 barrels on your contract #25. You are correct in saying the information should be distributed to all members, and it was decided by the Committee on Detail at their meeting in New York, Tuesday, that a weekly letter should be issued from this office, stating all cancellations and all matters upon which information has been asked and closed. (Gov. Ex. 358, Vol. II, p. 700.)

On June 14, 1917, the assistant to the president of the Atlas Company wrote the Association, *re-*

porting the cancellation of an unshipped balance *of 19 barrels* on a certain contract, and requesting that the records of the Association be adjusted accordingly. (Gov. Ex. 368, Vol. II, p. 705.)

On June 11, 1917, the Association was advised by the Atlas Company of the *cancellation* of an unshipped balance *of 7 barrels* on a certain order, and was requested to amend the records of the Association accordingly. (Gov. Ex. 369, Vol. II, p. 705.)

On June 1, 1917, the Atlas Company advised the Association of the *cancellation of 1¼ barrels* of cement, and requested that the records of the Association be modified accordingly. (Gov. Ex. 370, Vol. II, p. 705.)

On June 27, 1917, the Atlas Company reported to the Association the *cancellation of ½ a barrel* of Portland cement. (Gov. Ex. 371, Vol. II, p. 706.)

On June 1, 1917, the Atlas Company addressed a letter to the Association, *reporting the cancellation of a balance of ¼ of a barrel* (*one bag*) of cement due on a certain contract, and requested that the records be amended accordingly. (Gov. Ex. 372, Vol. II, p. 706.)

Thus was the great Atlas Company teaching by example the diligence that should be exercised to avoid the disturbance of the future market.

VII

THE FREIGHT RATE BOOKS, THE ARBITRARY BASING POINTS, AND THE PRACTICE OF SELLING CEMENT F. O. B. POINT OF DELIVERY ONLY.

Like all other "open-price" associations, this one adopted an easy method, and a very efficient one, of figuring in the freight to ascertain the delivered price at every point where a delivery would be likely to be made.

The price paid for a barrel of cement consists of three main elements: (1) The price at the mill, (2) the price of the bags, and (3) the freight charges. The evidence shows that the price of cement sold by all companies for delivery to the same point at the same time was made up of the same base or mill price, the same charge for bags, and the same charge for freight, regardless of the point from which the shipment was actually made. Uniformity of price was the inevitable result. (Vol. I, p. 146.)

The by-laws of the Protective Association provide that the secretary shall prepare and distribute among the members a complete schedule of freight rates on cement, and shall immediately advise all members of changes in freight rates. (Vol. I, p. 359.)

The Association distributed to its members freight-rate books covering all the New England

States and the States of New York, New Jersey, Pennsylvania, Maryland, Delaware, Virginia, the District of Columbia, and Ohio. (Vol. I, pp. 153–154.)

Manifestly books of this character were used by the members of the old Association of Licensed Manufacturers, as in Schedule A attached to the license agreement a "List of Delivery Points and Sections" was provided for. (Vol. II, p. 773.) The first books used by the members were furnished by the Alpha Company, who, it seems, already had quite a supply on hand. (Vol. I, p. 412.) In the meeting of January 14, 1916, the representative of the Vulcanite Company said:

> The Alpha Cement Company have turned over to this Association something which I know to be of very real value, and of large money value, and I think the Association ought to thank them for it. (Vol. I, p. 413.)

The freight-books published by the Association were used in making prices and were intended solely for the use of members. (Vol. I, p. 461.)

A memorandum exchanged between officials of the Atlas Company, under date of March 1, 1916, contained this statement which conclusively shows that it was the understanding that the figures appearing in those rate books were to be used by the members in making prices for quotations:

> On Friday, February 25th, we received freight rate books for all the Eastern territory, including Ohio.

> *These books, as I understand it, are to be used in making prices, whether the rates are correct or not.* (Vol. II, p. 969.)

This memorandum appears to have been sent the Association, and to have passed into the hands of the other members, as on March 16, 1916, Mr. Young, of Lehigh, in a note addressed to Kimball, the author of the memorandum, after quoting it added:

> For your information would advise that we have checked the books covering freight rates to points in West Virginia and find 618 errors * * * (Vol. II, pp. 970–971.)

That these books were for the members alone, and that they could be used by dealers in a way to disturb the market, is shown by remarks made in the meeting of March 20, 1916. Mr. Twamley (Coplay) had incidentally remarked that he had received requests for books from customers, which called forth the following discussion:

> Mr. DUTTON (Bath): One moment, may I have a moment before you put that question? I would like to say, that as far as giving books to customers for them to use to figure freight rates on, I would like to ask whether that is not a dangerous practice? We have a lot of inquiries for freight rate books. The ordinary customer is supposed to be selling in his own town. He knows what the freight rate is there. It means that every time there is a change of freight rates, we have to keep in touch with the freight books that we have

given out and see if they get the correct notice of the change of the freight rate. I think it is saddling on to each company who does that a whole lot of responsibility which may be a means of causing disturbances at different times on our quotations. We have a lot of inquiries about them, and I have always turned them down, I have not let any of them get outside of our own company.

The PRESIDENT (Giant): I think you are right.

Mr. SWETT (Lehigh): I don't think the customer should have the use of these freight books.

Mr. WEAVER (Allentown): I don't think so either.

The PRESIDENT: It is a matter for the Association members, and not for the customer.

Mr. DUTTON: That is what I believe.

The PRESIDENT: I don't think these books are made up for distribution among the customers of any company, it is for the use of the members of the Association solely, and their different branches.

Mr. DUTTON: I might simply say this, all this was brought home sharply to me; *about a year ago I was requested by a dealer in Baltimore for a freight rate book,* and before I gave it any thought, *I sent him one,* and it was but a short time before I learned that he was making prices at different points down on the eastern shore there, and *he had those freight rate books which he was using to upset the business that we had with the differ-*

> *ent dealers,* and it all started from letting him have one of those freight books.
>
> The PRESIDENT: I think this information should be kept for the members of the Association, and not for its customers. (Vol. I, p. 461.)

If the prices were not uniform at the mill and the delivered price based on the freight rate book, how could a dealer figure them out and "upset the business"?

Freight rates were published from the several basing points to practically every city and town in the northeastern section of the United States; and if there were 618 errors in the West Virginia book the total errors in all the books were innumerable.

On April 25, 1919, the secretary of the Association wrote a letter to a manufacturer, in which he said:

> * * * the rates published in our freight rate books are prepared by three cement companies who must concur absolutely before the rates are given out for publication. (Vol. II, p. 966.)

If freight rates are fixed by the Interstate Commerce Commission, and are definite and specific, what is the occasion for representatives of three of the largest companies belonging to this Association concurring on the rates to be published; and why was it necessary for those representatives to proceed to Allentown, Pennsylvania, prepared to stay all week if necessary to iron out the differences in

those rates, as is shown to have been done in a letter from Clark, Traffic Manager, to Gaines, Vice President of the Association, dated September 5, 1918? (Vol. II, p. 968.)

In August, 1920, the Knickerbocker Company transmitted to one of its salesmen a list of corrections furnished by the Association to be made in a certain freight rate book, stating:

> * * * they are not absolutely correct, there will be another correction sheet sent you later. *However, these figures are to be used when quoting for new market business.* (Vol. II, p. 974, 975.)

The relation of the freight rate books to prices is further illustrated by the following excerpt from a letter relating to freight rates dated December 13, 1920, which passed between officials of the Knickerbocker Company, to wit:

> As a matter of fact, I have learned, since returning from Boston, that there are about *four kinds of prices out. This difficulty will be overcome shortly I hope by the issuance of new freight rate books.* (Vol. II, p. 978.)

That is, after the issuance of the new book, *there would be but one price.*

The mills of the defendants are located at 26 points, as follows (Govt. Ex. No. 201; Defts. Ex. No. D818 neither printed):

> Group 1: Newcastle, Pa.
>
> Group 2: Hudson, Cementon, Jamesville, and Glens Falls, New York.

Group 3: Martinsburg and Manheim, West Virginia; Norfolk and Fordwick, Virginia; and Security, Maryland.

Group 4: Coplay, Northampton, Evansville, Martins Creek, Bath, Saylors, Nazareth, Egypt, Hercules, Siegfried, Ormrod, West Coplay, and Fogelsville, Pennsylvania; New Village, Alpha, and Vulcanite, New Jersey.

It was manifestly impracticable to submit the official tariffs showing actual freight rates on cement from all mills to the many thousands of delivery points at which the defendants have sold cement in this section of the country. To illustrate the general proposition, however, that freight rates vary with distances, a shorter haul taking a lower rate (Vol. I, pp. 147, 151), the Government has submitted in evidence 56 official tariffs[1] showing actual rates from the mills in Group 4 (except Fogelsville) to more than 900 destinations in New Jersey, this group being the only one in which mills are so closely contiguous that the same rate may in any instance apply from all. Rates from the mills in Groups 2 and 3 differ more widely, those in Group 3 being situated as follows: Fordwick approximately 100 miles in a direct line from Man-

[1] The tariffs are of the Central Railroad of New Jersey, Lehigh Valley, Philadelphia & Reading, and Delaware, Lackawanna & Western. (Govt. Ex. Nos. 261 to 316.) The rates given were in effect between June 25, 1918, and August 26, 1920, these being used as comparable with the Freight Rate Books in evidence, which came into use, as a revised edition of those previously used, about October, 1918.

heim, 120 miles from Security, 125 miles from Martinsburg, 200 miles from Norfolk, and 300 miles from the mills in Group 4. A glance at the map, defendants' Exhibit No. D818, shows a like dispersion of mills in the Hudson district.

The rates taken from the tariffs have been carefully compared in a tabulated statement prepared by the Interstate Commerce Commission (too voluminous to incorporate herein), which shows that two, three, and four different rates apply to more than 500 points in New Jersey out of 890 compared. The tariffs in evidence contain freight rates not only to points in New Jersey but also to a very great number in New York and Pennsylvania, and show a similar variance. A very large part of the cement manufactured in the Lehigh Valley district goes to points within the area in which rates differ. (Gov. Ex. 429, vol. II, p. 707. Side pp. 1469–1471.) One of the forms of the Association in evidence shows that practically as much cement is shipped to points in New Jersey as to all New England States, the respective amounts for December, 1920, being 826,861 and 862,342 barrels. (Gov. Ex. 67, p. 370. Side p. 709.)

Notwithstanding the wide dispersion of the mills and the consequent difference in the freight rates, as will be hereafter shown, the prices at which cement is offered and sold by all defendants at the same point at the same time are almost invariably exactly uniform. This is accomplished by making

all offers and sales upon the basis that all cement sold at any particular destination is shipped from a single point; and, consequently, that a single freight rate applies; or, stated in another way, all defendants have the same price at the mill (Gov. Ex. Nos. 325, 327, 330, 333, 336, vol. II, pp. 672–674, 675, 680. Side p. 1394, 682, 684), and add the same freight rate from them all; and therefore charge a uniform price at the point of delivery. Thus, as a former salesman testified, he was furnished a freight rate book showing rates from basing points, and computed the price " by having a *mill* price and then adding the cost of the sacks plus the freight rate to any given point." (Vol. I, p. 147.)

To conveniently and accurately apply this rule, four or five of the points of manufacture in the northeastern section of the country have been selected as basing points. The points so used by the defendants in this part of the country are called Universal, Hudson, Fordwick, and Lehigh Valley, the latter being the most important.

The defendants explain the basing points as " each point where cement is produced in sufficient quantities to affect the market to all delivery points " and the basing points are "a means of securing the lowest price at which cement can be obtained at any point." (Answer, Vol. I, pp. 101–108.)

Universal basing point is the location, in the extreme western part of Pennsylvania, of a mill of the Universal Portland Cement Company, not a

defendant in this particular action. (Defts. Ex. No. D818 and Vol. I, p. 146.) The Universal basing point does not " belong " to the Eastern Association—that is, to the Cement Manufacturers' Protective Association (Vol. I, pp. 146, 339)—and in fact it was seldom or never used in computing the price of cement sold in that part of the country.

Hudson basing point is the location on the Hudson River of plants of the Atlas and Knickerbocker Companies. The two plants at Hudson basing point produced annually during the six years immediately before this suit was instituted an average of 2,003,917 barrels of cement.[2] In that district more cement is produced elsewhere than at the basing point; and the total unused capacity elsewhere in that district has been more than the actual Atlas production at Hudson. (Gov. Ex. Nos. 373A, 374, 386, 387; vol. II, p. 706. Side pp. 1447, 1447½, 1453½, 1454. Defts. Ex. No. D818.) Hence, the entire basing point production could be withdrawn and yet, if the unused capacity was applied, a larger supply would be available.

Fordwick basing point is the location in the western-central part of Virginia of a plant of the Lehigh Company, as above stated, remote by many miles from other mills. The average annual production at that point for the six years was

[2] The Atlas Company's production is not separately given as to Hudson basing point, but is estimated as corresponding to the relative capacity of the Hudson plant to the company's total capacity in this section of the country. (Gov. Ex. No. 386, vol. II, p. 706, Side p. 1453½.)

532,515 barrels.[3] (Gov. Ex. Nos. 373A and 374; vol. II, p. 706. Side pp. 1446, 1447, 1447½. Defts. Ex. No. D818.)

Production at Fordwick, however, is less than at each of two of the three mills which use it as a basing point, and only 34,000 barrels more than that of the other. (Gov. Ex. Nos. 373A, 374; vol. II, p. 706. Side pp. 1446 and 1447, 1447½; Defts. Ex. No. D818.)

Lehigh Valley basing point is not a specific shipping point, but refers to an area of about 50 miles in the vicinity of Allentown, Pennsylvania, and partly in New Jersey, over which are scattered, at 16 different locations, mills of all but three of the defendants, as shown in Group 4. (Vol. I, pp. 146, 149.) Northampton, the location of a plant of the Atlas Company, is the basing point for Lehigh Valley. The annual average production at that point during the same six years was 5,305,694 barrels.[4] The annual average production at the other Lehigh Valley mills for the same period was 19,785,031 barrels. (Defts. Ex. No. D818.) Twice the actual production of the Atlas Company—the basing point production—could have been with-

[3] Production at Fordwick is not stated separately for 1918, 1919, and 1920. The production assigned for those years is the figure for 1917, namely, 604,000 barrels, considerably in excess of that assigned in defendants' Exhibit No. D818.

[4] Production at Northampton is not separately given. The capacity at that point, however, being five-sixths of the Atlas total capacity, that part of the actual production for the years given has been assigned to the Northampton plant. (Govt. Ex. Nos. 373A, 374, 386; vol. II, pp. 706. Side pp. 1446 and 1447, 1447½, 1453½.)

drawn and offset by the more than 10,000,000 barrels of unused capacity of the other mills in the Lehigh Valley district. (Gov. Ex. Nos. 373A, 374, 386, 387, vol. II, p. 706. Side pp. 1446 and 1447, 1447½, 1453½, 1454.)

The basing points Hudson, Fordwick, and Lehigh Valley, are used with respect to all but a relatively inappreciable quantity of the cement sold by the defendants in this part of the country. The base prices at Fordwick are 5 cents less than Lehigh Valley, while the price at Hudson is always 10 cents per barrel above Lehigh Valley. (Govt. Ex. Nos. 675, 676; vol. II, p. 963. Side pp. 1820½–1842½.) Upon any specific sale, however, the price involves the supposition that only one of the base prices is the price at all mills.

The freight rates used in conjunction with the base price, of the uniform mill prices, have been compiled by the defendants in seven printed tablets called Freight Rate Books, each showing freight or delivery rates from two or more of the basing points to " practically every place where cement can be delivered in the northeastern section of the United States."

Cement is sold in units of a barrel of 380 pounds, while the tariff rates are per unit of 2,000 pounds in carloads. (Vol. I, p. 244.) Barrel rates are not published, hence the transportation cost per barrel is necessarily stated with fractions. (Vol. I, p. 244.) Each delivery rate given in the Freight Rate Books, however, disregards fractions, and though

founded upon a true rate from a single mill is inaccurate to that extent. While, therefore, these rates are not, as defendants represent in their answer, official rates, even from the basing points, the Government makes no point of mere fractional deviations. As to other mills, these rates are not the official rates and can not serve "to prevent mistakes and errors in freight charges," as defendants also represent; nor can they obviate the necessity of each manufacturer ascertaining the actual rate between his mill and points of delivery. Consequently, for any other purpose than to render certain uniformity of prices, each rate is a fiction. For this schedule of delivery rates, the tariffs afford a convenient and ideal basis, lending it color of legitimacy and concealing its unlawful purpose. Proof of the official freight rates was relevant only as showing the fictitious character of the Association's so-called freight rates. The buyer pays the *actual freight* to the railroad, receiving credit upon settlement for the cement; and he thus becomes accurately informed of the rate from the mill.

The use of arbitrary rates to some points was deliberately continued, even after their incorrectness was known. For instance, a letter dated April 2, 1919, between the traffic managers of the Alpha and Atlas, sent also to the vice president of the Association, stated:

> * * * you show a higher rate from Alsen and Hudson to this point (Fishers, between Bangor and Ellsworth, Maine) than

> is in effect to points on either side. This, of course, is correct under the present tariffs issued by the New York Central Railroad but we are asking them to check in rates to this point the same as are now in effect to points on either side. When this is done, it will necessitate another correction notice. (Gov. Ex. 680, vol. II, p. 966.)

The members of the Association, without exception, make all sales f. o. b. point of delivery, requiring the purchaser to pay the freight and allowing him credit therefor when making payment of the invoice for the cement.

The Whitehall Company, which is not a member of the Association, (Vol. I, p. 145), sells f. o. b. its mill, customers paying the actual freight as published in the tariffs and of which they are informed by the company. (Vol. I, p. 152.)

To supplement this practice and to make more certain that cement could be obtained at no destination except at the uniform prices made by defendant corporations, the contracts of all but three exclude the buyer from control of shipments until arrival at destination, yet place upon him all responsibility from the time shipments are delivered to the railroad company at the mill. (Gov. Ex. Nos. 628, 571–600; vol. II, pp. 821–916 and 961. Side p. 1811.)

The basing point prices and the delivery charges given in the Freight Rate Books are applied in the following manner: Each defendant company tells

its salesmen to sell at any delivery point by adding to the base prices the freight designated in the Freight Rate Book from each and quote the lowest total. (Vol. I, pp. 146–147.) For instance, to the little town of Absecon, New Jersey, the salesmen of many or all the defendants would come, each equipped with an identical New Jersey Freight Rate Book showing ostensible freight rates from Universal and Lehigh Valley basing points. Let it be supposed that the Universal and Lehigh Valley base prices are at the time $1.70 and $1.75, respectively. Each salesman adds to the Universal price the amount designated as the freight from that point, namely 80 cents, and to the Lehigh Valley price the figure given as the rate from that point, namely 53 cents. (Gov. Ex. No. 4, vol. I, p. 353. Side p. 638.) Disregarding bags, the sums are stated thus:

	Universal.	Lehigh Valley.
Base price	1.70	1.75
Delivery	.80	.53
	2.50	2.28

The lower is the price quoted by all. (Vol. I, pp. 146, 185, 250, 251.) The salesmen had " positive instructions " to make prices in this manner, and were without discretion or authority to deviate therefrom. (Vol. I, pp. 146, 147, 152.)

Each mill, except the one actually situated at the basing point, has in reality a different price for each buyer. Hence, discrimination is not only not pre-

vented, as the defendants suggest in their answer, but is inherent in the basing point price fixing device. The following table, comparing prices actually realized on shipments to Reading, Pennsylvania, minus actual freight, shows how large communities are thus discriminated against and deprived of the benefit of proximity to a mill and of the consequent " difference in the cost of * * * transportation " which the Clayton Act specifically contemplates they shall enjoy. (38 Stat. 730, sec. 2.)

Company	Barrels [1]	Price minus bags	Actual tariff rate	Assn. rate	Actual mill price
Allentown	46, 000	$2. 12	[2] 25. 441	37	$1. 86559
Lehigh	10, 000	2. 12	[2] 31. 312	37	1. 81688
Coplay	2, 000	2. 12	31. 312	37	1. 81688
Penn-Allen	2, 800	2. 12	[3] 37. 183	37	1. 74817
Lawrence	3, 500	2. 12	[4] 37. 183	37	1. 74817
Bath	1, 500	2. 12	[3] 37. 183	37	1. 74817
Vulcanite	8, 400	2. 12	[4] 37. 183	37	1. 74817
Dexter	4, 000	2. 12	[3] 37. 183	37	1. 74817

[1] Transactions taken from Form 10, pp. 40–41, Nov. 1, 1919.
[2] Govt. Ex. No. 302. Mills at Evansville, Ormrod, West Coplay, Coplay, and Saylors.
[3] Govt. Ex. Nos. 304, 311. Mills at Nazareth and Bath.
[4] Govt. Ex. Nos. 261, 266. Mills at Siegfried and Vulcanite.

(Exhibits not printed.)

The above is one of many instances where the actual rates differed as much as 12 cents per barrel from the rate charged, the Association rate being based on the highest, and where the city of Reading paid the Allentown Company, which enjoyed the shortest haul, $564 more than it would have paid at the base price plus actual freight. If competition existed amongst the defendants and if the basing

point price fixing device were the development of competition, the Allentown Company would have been compelled to share with the purchasers of cement at Reading and the many points elsewhere similarly situated some part of this $564.

The following testimony of Mr. Shade, a buyer, shows that the Freight Rate Books are used solely for the purpose of quoting uniform prices:

> The Lehigh have a factory at Fordwick. I carried on special negotiations with Lehigh. They were the first ones I went to because they had the advantage of a good location, that is, they were the closest mill to the job. I asked their salesman, Fred Ford, why he wouldn't give me a lower price because he had a closer mill. He told me he would either give me the Lehigh cement shipped from the Lehigh Valley or Lehigh cement from Fordwick at the same price. He would make no difference in the delivered price whatever, although the freight was considerably less. I deducted the freight on the Lehigh cement from his delivered price and got the mill price and asked him to sell me that same cement at Fordwick at that base price and allow me to pay the freight. He said they wouldn't do that * * * (Vol. I, p. 225.)

VIII

INFORMATION CONCERNING CREDITS

Clause (a) of Article III of the Constitution gives information concerning credits as one object of the organization. (Vol. I, p. 355.) The following forms are used by the association in carrying into effect this provision of its constitution:

Form #25.—Used by manufacturers in reporting to the Association monthly all delinquent accounts. It shows among other things the customer's name and address, and the amount of unpaid accounts four months or more old, three months old, two months old, and the ledger balance. It also shows the accounts which have been placed in the hands of attorneys. (Gov. Ex. 59, Vol. I, p. 367, side p. 703.)

Form #15.—A so-called credit report, by means of which the Association communicates to all its members each month the information received on Form #25. (Gov. Ex. 60, Vol. I, p. 367, side p. 704.)

Form #16.—Issued by the Association and distributed to its members along with Form #15, being a summary of the information and data contained in that report. (Gov. Ex. 61, Vol. I, p. 368.)

Form #17.—Issued monthly by the Asso ciation and distributed to its members along

with Form #15 and Form #16, being a summary of past due accounts for the preceding 12 months. (Gov. Ex. 62, Vol. I, p. 369.)

Form #18.—Issued monthly by the Association to show accounts placed by various members in the hands of attorneys for collection. (Gov. Ex. 63, Vol. I, p. 370.)

Form #31.—Issued monthly by Association and showing by chart or picture certain information reported on Forms Nos. 15–18. (Gov. Ex. I, p. 161.)

Form #27.—Used by Association in answering specific requests of members for information concerning a certain account. (Gov. Ex. 64, Vol. I. p. 370.)

Form #26.—Used by manufacturers in reporting quarterly to the Association (1) Total bags returned; (2) Total bags rejected. (Gov. Ex. 65, Vol. I, p. 371.)

Form #19.—Summary report compiled by Association from Form #26 and issued quarterly to its members showing as to each company (1) Total bags returned; (2) Total bags rejected; (3) Per cent rejected; (4) Per cent rejected during the preceding year. (Gov. Ex. 66, Vol. I, p. 371.)

For explanation of forms, see evidence of Miss Phalen, Vol. I, pp. 159–161.

It is proper for business men to have some method of ascertaining the moral and financial responsibility of their actual and would be customers. Agencies exist to procure and for a consideration impart such information. But as those who sell

the same trade have peculiar knowledge as to the reliability of buyers, there is no good reason why they should not exchange among themselves the information they possess upon that subject. *But the practice should be confined strictly to an exchange of knowledge, and certainly should not extend to any understanding, expressed or implied, as to circumstances and conditions under which credit will not be given.* Such an understanding is equivalent to the creation of a black-list, which often has been condemned. Furthermore, there should be no stipulated list of customers to whom it is agreed that certain advantages shall be given. Everyone should be absolutely free to sell to whom he pleases, and on such terms as he pleases.

The record does not contain sufficient evidence to justify the inference that a list of those who should be considered dealers was actually maintained *and agreed upon*, although there is evidence that there was a list of dealers, and that one had to be on that list to purchase cement at dealer's prices. Thus Mr. Thropp, general manager of a coal and iron concern, testified that in about May, 1916, he had a conversation with a representative of the Lehigh Company who had charge of the territory he was in. The salesman quoted his price, and Mr. Thropp told him he wanted a lower figure; but the salesman said he could give it only if he could get the company's name put on the list of Association dealers; that "then he could get a reduced price if our name was authorized by their Association; and later on,

within a week or so, we got a contract from the Sales Manager of the Lehigh Company, giving us the dealer's price through one of our stores." (Vol. I, p. 227.) His company operated four or five stores; and they sold "some building supply stuff" (Vol. I, p. 228); but the important thing was that the company had to be on the Association's list in order to purchase cement at the dealer's price.

A positive agreement not to sell certain individuals, or individuals who have not complied with stipulated conditions, is not the only, or most effective method of imposing a restraint upon the members of an Association in their dealings with customers. For illustration, it would manifestly be unlawful for those who control the supply of a commodity to agree that they woud not sell to any person who had permitted a bill to go unpaid for a period of say sixty days. But if such an agreement be unlawful, any system is unlawful which by concert of action brings about the same result. And the Government insists that the discussions at the meetings with reference to extension of credits were of such character that a greater restraint was thereby imposed upon the members than there would have been by a positive agreement as to conditions upon which credit would be given, not accompanied by personal comment. The following excerpts from discussions of their meetings are cited as examples.

In the meeting of the Credit Men's Branch on January 31, 1916, there was under discussion the

question of reporting delinquencies of ten dollars and less. The following colloquy occurred:

Mr. Medler (Atlas): I do not see why you eliminate any amount. If you keep out of the record accounts of the customers who owe $9 and less, *you have just a chance to make an allowance of that $9 to this customer. In other words, you might cut your price $9 whereas if that was reported it would be a different proposition.*

Mr. Hilles (Dexter): It might be discrimination, that is what you are driving at, it might be discrimination?

Mr. Lober (Vulcanite): It might be, why not?

Mr. Hilles: Mr. Medler's point is well taken, it would be much better that we report everything.

Mr. Medler: That is a way a discount might be forced, if a man habitually holds out $4 or $5 and you make that concession to him which he is not entitled to, after that has been repeated you realize that enters into the question of credit of that man, and that is something that we should all know.

Mr. Matthes (Alpha): I move that the companies report their accounts as they have in the past and designate any of these small balances that may be disputed items.

Mr. Alker (Pennsylvania): I second the motion.

The President (Giant): Gentlemen, you have heard the motion, all in favor of it will say "aye." (Ayes.) The contrary "no." Carried. (Vol. I, p. 422.)

And again:

> Mr. Jiggins (Giant): Are we to report that an account placed in an attorney's hands has been paid later?
>
> Mr. Matthes (Alpha): I do not know as that is essential. It is valuable information to have but the fact that there had to be action taken of placing your account with an attorney is what you want to get at.

Mr. Medler (Atlas): *That is all I want to know.*

Mr. Hilles (Dexter): *We do not care whether he pays or not.*

Mr. Lober (Vulcanite): The fellow interested in whether he pays it or not is the fellow who owns the account.

Mr. Medler (Atlas): *If we have to sue a man to get the money we won't sell him that's all.*

Mr. Gilkynson (Phoenix): When he has paid the attorney or the attorney has had to bring suit and he has paid after suit that would be interesting information.

Mr. Matthes (Alpha): You are the only one interested in that. (Vol. I, p. 422.)

After the discussion had been further extended, Mr. Lober (Vulcanite) remarked:

> This will bring everything except the accounts in attorneys' hands on one list and will make just that much less searching necessary, and will also show you if this particular man is a customer of one company and he is giving notes in payment and to another company he is running an open account; for instance, he may be giving one man notes and he may be meeting these notes

promptly as you will see by comparing that list from month to month, he pays them when due or on the other hand he may be giving notes and stringing along indefinitely in renewing them. This information will all be on one sheet here and by a quick comparison you can determine just what his status is and if he is playing fast and loose with you, if he is in one case doing directly opposite from what he is in another. (Vol. I, p. 423.)

The discussion was still continued, and Mr. Bodin ( ) said:

Well, it was brought out so strongly by someone here that they didn't care to have anything to do with anybody that had to be sued, if that was the idea, I thought we ought to know more about it. (Vol. I, p. 425.)

And the result of the discussion appears from the following remarks:

Mr. Bacon (Sec'y): Do I understand the report comes in as to placing in the hands of attorney are not to have any description or are to have any description of what the action has been, but simply a statement showing they are in attorney's hands, is that it?

The President: Yes.

Mr. Lober (Vulcanite): On the first of February all you will have to report, is this is placed in an attorney's hands, those accounts that have been placed there during January, without any report as to the result on previous accounts. (Vol. I, p. 426.)

Subsequently, at the meeting of March 20, 1916, a somewhat different view prevailed as to whether or not the payment of accounts which had been placed in attorneys' hands should be reported. Mr. Hahnemann (Bath) made the suggestion that payments of such accounts be reported. Mr. Jiggens (Giant) remarked that at a previous meeting it was decided that if anyone desired additional information he could call up the company who had reported the account; and the President said: "At the last meeting, it was decided that accounts placed in the attorney's hands, should be left in that state"; but that if a change was desired the members could very easily be requested to send in reports showing payments; and a motion to that effect was carried. But immediately after this action was taken, Mr. Lober (Vulcanite) said:

> I want to bring out the point that several of the interested members made in connection with that attorney's list. *They wanted that list to be kept as a sort of permanent reminder, or evidence that the man's name had gone on that list and that was enough for them. They didn't care whether the account had eventually been paid or not. They still wanted to know that that fellow had been subject to a suit, for they themselves did not want to sell him if some other person had to sue them.* And Mr. Medler was very emphatic about that, and therefore I understand that it was the majority of the meeting in New York—when I was running this thing—that the majority of the members

> would not want the name removed from the list, when it was paid—when the account was paid. They want the name continued there as having been sued at some past time. Of course, mark them paid, that is all right, but still keep the name in that list. (Vol. I, pp. 453–454.)

The remarks of Mr. Lober made in the meeting of October 15, 1918, show how promptly accounts placed in hands of attorneys were reported. Mr. Lober said:

> Those special reports, those special notices of accounts placed in attorney's hands, as I understand it, are sent out immediately on receipt of notice from the company that they have placed that account with an attorney. There is a special circular sent out to all of the members at once. They do not wait for the issue of the regular monthly report. (Vol. I, p. 569.)

It appears that the members also at times conversed with each other over the telephone in regard to the standing of a purchaser. Thus in the meeting of January 23, 1919, Mr. Lober (Vulcanite) detailed a statement he had made to Mr. Naylor (Knickerbocker), who had inquired of him with reference to the credit of a purchaser, whom his company had sued. The reason for the suit is thus stated:

> We placed an account in the attorney's hands, an account of a concern which was in good credit, discounted their bills. *It was due to their having misused contract cement*

> *which we found, discovered, as a very flagrant case.* We charge them with the difference between the market price and the contract price which they refused to pay, and eventually that account was placed in the hands of an attorney for collection, or it still is. Another company was interested in that account, and when they noticed we had placed it in the attorney's hands, within a day or so afterwards, I got an inquiry from the credit man of that other company asking for the particulars. (Vol. I, p. 581.)

At that same meeting there was submitted by the credit committee the form of a questionnaire to be sent out to the members, the object being to bring out opinions as to how improvements in the credit system could be made. The 8th question was: "What do you consider a bad debt? When do you charge it off"? The Chairman inquired: "Mr. Lober, was not that last question the subject of a good deal of discussion at the meeting they had over at the Biltmore?" (p. 583) which remark indicates that they had been discussing this subject at meetings not reported, probably committee meetings. A motion was carried instructing the officers to send out the questionnaire; and the Chairman stated that the answers would then be placed together and sent to the different credit managers. (Vol. I, p. 583.) At the meeting of April 17, 1919, a report was made by the Credit Committee containing a number of recommendations. Among them was one that each company adopt a system which would enable it to report unpaid accounts

sixty days old or more promptly at the end of each month, even though it might delay the closing of their customer ledger; and another that the members should not hold up reports to the Association pending any adjustments during the month following. (Vol. I, p. 595.) As indicative of how strict some members were with reference to extending credit, and how effort was made to instill a like spirit in others, we quote from the following remarks of Mr. Hilles (Dexter) made at the meeting of December 14, 1920:

> It comes back to Jiggens' letter; there lies the key to the whole situation; and if we would only act upon that letter, *that suggestion of his, of never shipping a car of cement to a dealer, being able to say no when we have the information in our hands that that dealer owes another cement company right alongside, for cement bought over thirty days ago.* I have just been checking up, while we have not had any trouble in the past, I found five this morning; I am writing five letters to you gentlemen here asking for your experience. *If he owes me, and he owes you, and he owes that fellow, this man is automatically, with the writing of that letter, marked "no credit" on that day. The minute that letter goes out, it determines "no credit."* The salesman is advised by dictating that letter. The two processes naturally follow. My list is none too good. I have about sixty or seventy with four months' old stuff, and most of mine is with country dealers. But nevertheless during

> the three or four months when we were shipping that cement, these fellows did not owe anybody else any money. When this spring season opens, I want to be very careful as to whom I ship cement. *I want to try to get myself to say absolutely no, no matter how badly he wants me to ship cement. If a fellow will write me I will tell him everything, what my experience is.* (Vol. I, p. 616.)

At that meeting there was an extended discussion relating to credit, and Mr. Tiree said:

> Yes. It is not so much the sixty days, as we want to find those delinquents. If we have reason to know that such and such a party is going to be delinquent for the sixty days, and we shut off shipments to him, it seems to me entirely proper for us to put that on, and include it under the sixty days. (Vol. I, p. 619.)

And Mr. Christ (Coplay) said:

> And over against that you have accounts of three or four months and you don't hold up shipments. Why not make some parenthetical explanation in a condition of that kind. (Vol I, p. 619.)

The discussion had finally reached the point where doubt arose as to whether they were in effect creating a "black-list," and Mr. Lober (Vulcanite) remarked:

> I don't want anybody to get the impression that we are publishing a black-list. We are not. We want to have all the informa-

> tion we can get, and yet we must always keep in mind the plan and the scope of the Association as expressed in the draft of the purposes which were printed at the beginning of the first minutes and the constitution and by-laws, that every company member is absolutely free to conduct his business as he pleases. (Vol. I, p. 619.)

The credit managers were manifestly wishing to adopt and enforce still more stringent regulations at the meeting of January 20, 1921; and in the absence of Mr. Lober, Mr. Hulsart was asked to read a report of the credit committee, from which it appears that a number of credit managers had held a meeting in New York on the 14th of the previous month and had then discussed matters affecting credit conditions. In the report certain extensions of the credit system were recommended; but before its adoption it was determined that the matter should be referred to the Association's attorney for advice as to its legality. (Vol. I, pp. 620–621.) Counsel in his reply expressed the view that the action contemplated was legal but inadvisable, because "there are numerous people trying to get a picture of the Association just now, and during that process any movement, however harmless in itself, is apt to obscure more or less the outline. . . . In brief, simply on the theory that it is not desirable to move when one is having one's picture taken, I suggest deferring action on these suggestions." (Vol. I, p. 622.)

IX

MEETINGS

Article IV of the Constitution and Section 7 of the By-Laws provides that *the Association shall meet monthly,* " the time and place of each meeting to be fixed by the Association. Special meetings may be called whenever the President shall deem it necessary or upon request of five (5) members." (Vol. I, p. 358.)

The second paragraph of Article VIII of the Constitution provides:

> *Full and complete minutes of all matters discussed at any meeting of the Association shall be kept* and such minutes, together with all records, files and correspondence of the **Association, shall be preserved and held open** at all times to any public official or other person who may have any legitimate reason for desiring to be completely informed concerning any or all the activities or transactions of the Association. (Vol. I, p. 357.)

And a stenographic report of all discussions and actions taken was kept; and the Association's counsel was present at every meeting to steer the discussion away from illegal subjects and to have them confined to matters strictly within the purview of the Constitution and By-Laws of the Association.

From the citations heretofore made to and quotations taken from the minutes of the meetings, it is apparent that the impelling force of those discussions toward cooperation can not be estimated.

But a further consideration of the minutes will show the absolute impossibility of confining such discussions to the subjects specified in the Constitution and By-Laws; and that through them agreements were reached, sometimes positively expressed but more often tacitly understood, which related to many of the most important practices of the industry. If, under the circumstances described, discussions of the character shown in the minutes of the meetings of the defendant Association occur, what their nature must be when had in the absence of all restraints can only be imagined. In the *Hardwood Case* (*United States* v. *American Column and Lumber Company*, 257 U. S. 377) the proof showed that the secretary, Gadd, requested from each of the members an expression of opinion as to the benefits they had received from the Association's activities. In reply, a number of the members freely described the benefits they had derived therefrom; and their testimonials not only were material evidence in support of the Government's contention in that case, but demonstrated exactly what results are accomplished by all trade associations which carry on practices of the character there proven. So here the minutes of the defendant Association are conclusive evidence, not only of what occurred in the discussions had by the members of the defendant Association, but also of the scope and nature of discussions which will naturally be had in meetings of all trade associations.

X

SUBJECTS CONSIDERED AND PASSED UPON BY THE ASSOCIATION OUTSIDE OF ITS CONSTITUTION AND BY-LAWS

On cross examination Miss Phalen, the Association's Secretary, testified:

> The business of the Association is confined to dealing with these four subjects that have been mentioned, that is, specific job contracts, credits, freight rate books and statistics of production, shipments and stocks on hand. The business of the Association is carried out by getting certain information as to those four subjects, putting that information on printed or mimeographed reports and sending those reports to the members. The Association simply repeats or tabulates this information without drawing any conclusions from the information or making any suggestions in connection with those subjects. The Association is in substance simply a mechanical multiplying and tabulating machine. (Vol. I, pp. 161–162.)

The witness no doubt was conscientious in this statement; and if a full report of the discussions and actions taken at the meetings had not been kept, it would doubtless have been proven by a number of witnesses, and probably not contradicted, that the activities of the Association were confined strictly to the subjects mentioned in the Constitu-

tion. All of the subjects embraced in the Constitution have heretofore been treated; and now consideration will be given to matters with which the Association was supposed to have nothing to do whatever.

RETURN OF BAGS

This subject gave the members of the Association no little concern, because it is a matter of importance in the cement industry.

Cement is generally placed on the market in bags, the practice being to charge a certain amount for the bags when the cement is sold, and then allow the purchaser credit therefor when the bags are returned in good condition. The usual charge made for a bag is ten cents; and if the bag is returned in good condition the purchaser is reimbursed ten cents. The cost of bags to the several manufacturers must have varied widely, because some companies require, and are in a position to order large quantities of bags, whereas other companies require a comparatively small number of bags. The price of bags, along with everything else, advanced materially shortly after the war period. Some of the nineteen manufacturers must have been fortunate enough to have contracted for their requirements before the peak of prices was reached. However, regardless of what the bags must have cost, the various manufacturers all made identical charges therefor. Manifestly, leniency in the inspection and acceptance of bags returned is tanta-

mount to a rebate in the price of cement; and this question repeatedly arose in their meetings. Thus in the meeting of May 15, 1916, Mr. Lober (Vulcanite) said:

> Do you desire any discussion as to the results of the tabulation of the bag figures for the last three months? There is a very great divergency in the percentage of rejections. The lowest here appears to be one-half of one per cent., and there is one here which shows nearly four and a half per cent., that one fellow rejecting nine times as many bags as the other, and the average is nearly two. Now there may be causes which will explain that. It may be that the companies which show very large rejections did not have very many new bags last year, particularly the latter part of the year. The companies which show the smallest percentages may have put in many new bags, and it may be that they shipped largely on contracts, where the contractors could take good care of the bags. But there is a most remarkable difference between the high and the low figures. The highest is apparently four and a half per cent., and the lowest only half of one per cent. There are about five who are below one per cent. We have never been able to get that low, even when we had new bags, and on the other hand we have never gone as high as four and a half per cent., when we had nothing but old bags. Perhaps it would have been just as well to have let it go a little longer. *The gentlemen*

who are not rejecting many, are the ones whom it ought to cause some study.

This is the first report, and we will have another report at the end of the next three months, and that will give us a little larger basis for averaging. (Vol. I, p. 484.)

At the meeting of February 20, 1918, a letter from the president was read by the secretary, which related to this subject. In the letter Mr. Mallory (Edison), the president, said:

> I have already made a rough calculation which indicates that we are getting a smaller percentage than some of the other companies, and I will appreciate it if you will take the matter up and see if it is possible to obtain from each of the companies a memorandum showing the total number of cloth sacks which each company shipped during 1917; that is, eliminating the shipments in paper and wood, so that the percentages would be on a comparative basis.
>
> If this information is available, it might be illuminating to some of the companies, as well as ourselves, if you would work out the percentage and send the results to each company. (Vol. I, p. 550.)

The secretary then stated that he understood what the president wanted was for the reports to show the number of bags *shipped* by each company and the number returned, as only the number returned was then reported. The Chairman inquired if any-

one had any objection to supplying Mr. Bacon (Secretary) with that information.

> Mr. TWAMLEY (Coplay): I move that the information asked for in the letter of Mr. Mallory be supplied to the Secretary.
>
> Motion seconded by Mr. Cover (Security) and carried. (Vol. I, p. 550.)

However, the discussion proceeded; and Mr. Scott (Giant) remarked:

> Mr. Mallory's point is that our records show a tremendous number of bags outstanding in the customer's hands and we want to see if our records *show a larger number than the other companies.* In other words, we want to know the number of bags outstanding, so that we can provide for the future and so on. (Vol. I, p. 551.)

The motion which had previously been carried was subsequently modified as follows:

> Mr. COOGAN (Alpha): I move to amend the motion to get these figures for the year 1917 and distribute them.
>
> Mr. BROBSTON (Dexter): May I make a suggestion that the reports show the total number of bags shipped for 1916 and 1917. Wouldn't it be interesting to have the total number of bags for both years?
>
> The CHAIRMAN: The idea then is to supply Mr. Bacon with information showing the shipment of sacks during the years 1916 and 1917, with the amount of sacks returned.
>
> Motion seconded by Mr. Jiggens (Giant) and carried. (Vol. I, p. 551.)

At the meeting of November 19, 1918, the method of counting bags was discussed, and Mr. Gaines, Vice President of the Association, said:

> I secured that information and sent it back to the members in the form of a *statement showing the method each company used in counting sacks, whether before cleaned or after cleaned.* That report has been made to the members, and we can incorporate it here as a part of the records of this meeting. (Vol. I, p. 575.)

In the minutes of the meeting of April 17, 1919, it appears that the Credit Committee had met and held a meeting the night before, and had discussed a number of trade practices; and with reference to the question of bags returned, Mr. Lober (Vulcanite), who submitted the report, said:

> Another matter that was discussed last night was the question of sack returns, the great variation which is shown in the rejections as between various member companies.
>
> The credit managers felt that the variations were larger than they should be, and that something might be done to reconcile those differences, and they would like to have the office here take up that question with the various companies and find out which man in each organization is directly connected with that work, and see if it would not be possible to have a meeting and discuss these differences *and find out if there was not some way to have some more uniform method of inspecting return sacks so that*

the results would be comparable instead of showing such an enormous variation. (Vol. I, p. 596.)

After some further remarks the following colloquy occurred:

The CHAIRMAN: Do you think it possible, Mr. Lober, that instructions could be issued, or any plan formulated, whereby the men inspecting sacks—different men in different companies inspecting these sacks—could determine what was a good sack and what was a bad sack. Does not the human element enter in there to a great extent?

Mr. LOBER (Vulcanite): It enters into it to a very great extent, but it seems to me the differences as they are now are too great to be entirely covered by the personal equation. Possibly by discussion we might draw up some standard rules for inspection which would tend to make it somewhat more uniform. I do not know whether we could or not. (Vol. I, p. 596.)

After remarks by Mr. Dutton (Bath) and Mr. Lober, the Chairman again said:

I think you will find that one reason for that variation is that some companies allow credit for any sack which can be repaired and used again, and others do not. (Vol. I, pp. 596–597.)

Mr. Lober in closing his reply to this remark, said:

I do not know whether anything can be worked out on that line or not. I might say

that the same matter was put up to the Package Committee of The Portland Cement Association, to try and work up something in the way of a specification or a set of rules for inspecting, and possibly testing, return sacks which would as far as possible make that inspection at the various mills uniform.

The CHAIRMAN: Has any one any suggestion as to how that could be done?

Mr. DUTTON: My candid opinion in this whole matter is this, that with some of the companies the sales department has too much to say regarding bag credits. I know it is very easy for a company to have certain accounts which they do not want to lose where there were complaints coming in of bag credits, to overlook and go ahead and give them a credit that they were not entitled to. I feel that this is largely due to the selling end of it that that is done, because I cannot conceive why there should be this big variation in bag credits if it was left entirely to the operating department and the credit department in the mills. (Vol. I, p. 597.)

At the meeting of June 19, 1916, the following discussion occurred with reference to allowing a discount when the purchaser remits check, less the amount of bags returned, when the bags have not yet been received:

Mr. MEDLER (Atlas): I should like to get an expression of opinion from the meeting

as to what is considered good practice in the way of a bill of lading covering bags in transit not yet received when taking the cash discount. To put a concrete illustration, supposing a man has shipments until the 15th of the month and promptly on the 24th or 25th, within the discount period, he sends his check, the amount of the invoice would be, say $250, his check would amount to $150 and he encloses a bill of lading for enough bags to make up the difference after deducting his discount. Now, it has been my understanding that it was not considered cash payment to take a bill of lading, for bags in transit, and I have sent these checks back. The wrath I have brought down upon me has been so severe *that I would like to know what other members of this meeting have to say on the subject before I know whether or not to stand by my guns.*

Mr. ISRAEL (Coplay): It strikes me Mr. Medler's practice is exactly right. Anything else merely means the customer is setting himself up as a judge and jury to decide every bag he sent was in splendid condition and was all right and a full credit must be allowed for the same.

Mr. MEDLER: Of course we would adjust our differences when received at the mill.

Mr. ISRAEL: This is simply another controversy. I will stick by what I said, that you are absolutely right. See what the others think about it.

Mr. GRIFFITH (Giant): Gentlemen, this is a very interesting subject, allowing credit for bags on the way in settlement before they are received at the mill.

Mr. ISRAEL: See what each one says about it.

Mr. LOBER (Vulcanite): Mr. Medler's question is not what we ought to do, but what we are doing?

* * * * *

Mr. LOBER: Mr. Medler brought that discussion up at one of our meetings. I looked into it, and it occurred to me possibly our customers were doing that. I knew there were deductions made for sacks. I looked it up and found occasionally there were cases of that kind and our cashier had been accepting on account and holding up the receipt until we got the sacks, and they were all right. *We want our practice to be the same as the others.*

Mr. ISRAEL: *Gentlemen, I hope this practice will become universal*—not to do it, as really, it is almost impossible to differentiate between allowing a check which was sent and which would not be received until long after the discount period and allowing for cement bags sent and which you do not receive until after the discount period.

Mr. GRIFFITH: *It seems to be unanimous they have not been allowing credit for bags on the way.* (Vol. I, pp. 493–494.)

At the meeting of October 16, 1916, the question as to the return of sacks to customers when demanded by them was under discussion, and the president said:

> The gentleman who brought this up wanted to get the feeling of the different members as to how they were handling this, *and it seems to be the general consensus of opinion that in the future,* when a customer asks to have bags returned, we will put them in the next car of cement that is shipped, and so state it on the bill of lading. Is that the feeling of the members present? (Vol. I, p. 514.)

At the meeting of May 21, 1917, the question considered was thus stated by Mr. Medler (Atlas):

> I would like to get an expression of opinion as to what the members would consider good practice in accepting bags after a long delay in transit for discount purposes.

Thereupon the president remarked:

> I think that is an important matter we should give some consideration to. In regard to the return of empty bags, you are aware that at present railroad conditions are such that bags do not come back with promptness, and some important customers who discount their bills do not get a credit memorandum for bags returned as it may be a month or six weeks or some such time before they are finally returned to us. (Vol. I, p. 527.)

After some discussion the following exchange of views and action by the Association was had:

> Mr. COOGAN (Alpha): I think we would make a mistake in changing our present rule.
>
> Mr. MEDLER (Atlas): I am rather inclined to agree with Mr. Hilles that when a man presents a bill of lading we should take in good faith that he has made such shipment. Our company has not had much trouble except in one or two cases lately, and I think myself that there may be cases where individual judgment may be used.
>
> Mr. WALTER (Lehigh): I think if we did make an exception in one case it may be possibly only postponing trouble with other customers.
>
> Mr. DUTTON (Bath): I believe if we make exceptions it would only lead up to chaotic conditions and disputes. If a customer finds out we made an exception in one case there is trouble right away.
>
> Mr. COOGAN: I think it would be better to leave matters remain as they are, and I would therefore move that this meeting reaffirm our present policy so far as the handling of empty bags and bag credits are concerned.
>
> Motion was duly seconded and carried. (Vol. I, p. 528.)

At the meeting of July 16, 1918, the following discussion occurred with reference to exchanging sacks between the companies:

> Mr. LOBER (Vulcanite): I have a matter I would like to get an expression of opinion on.

I have received from a number of the companies, letters in regard to the intercompany sack exchange basis—foreign sacks, I believe we could discuss that here as to the desirability of a change, and as I know that some of the members have been making that change, it seems to me we ought to have a uniform practice—all of us.

The CHAIRMAN: I think Mr. Lober has brought up a matter which we are all very much interested in at present. I would like to hear from some one what his views are in the matter. Mr. Griffith, have you anything to say?

Mr. GRIFFITH (Giant): We are still holding to the old rate of five cents. I feel if we raised that price it would only imperil the matter.

The CHAIRMAN: How do you feel about it, Mr. Twamley?

Mr. TWAMLEY (Coplay): I understand the question is the amount to be paid for sack exchange between manufacturers.

The CHAIRMAN: Yes.

Mr. TWAMLEY: I feel in view of the present cost of bags that that amount is too small. I think a rate of ten cents would be an improvement.

The CHAIRMAN: The big drawback in making a change in the interchange value of sacks, of course, is for the reason which Mr. Griffith brought out, but I doubt it would amount to as much as we possibly think it would. Mr. Griffith remarked that changing the price of sacks for interchange

between mills from five cents to ten cents would encourage customers in returning all their sacks to one manufacturer. How do you feel about that, Mr. Coogan?

Mr. COOGAN (Alpha): We prefer the five cents. We agree with the remarks that have been passed here that if we go to ten cents there will be a great deal of abuse. We do not see any reason why there should be a change.

Mr. MEDLER (Atlas): We are paying five cents now and I do not think we care to change that. We do not like to handle foreign sacks; they are expensive and troublesome. We cannot get enough labor to count our own sacks and we do not want to bother about turning over that labor to take care of the other sacks. We do not think we ought to change from the five-cent basis. (Vol. I, pp. 564–565.)

DISCOUNTS.

This is another subject which was repeatedly discussed at association meetings.

At the meeting of March 20, 1916, Mr. Walters presented a card to be given customers which contained a succinct statement as to terms of discount, and which was the subject of lengthy and very favorable comment. The principal point of discussion was whether the time of payment to obtain the discount should be within the stated period from the *date of shipment* or *date of the receipt* of

the cement. In the course of the discussion, the president said:

> It was intended, this five cents on a barrel, it was absolutely intended to receive payment within ten days from the date of the invoice. And I think it is a very important thing that we try to hold to that arrangement, and the suggestion of the Lehigh Company seems to be a very good one.
>
> Mr. ISRAEL (Coplay): Mr. Chairman, would there be any objection to having that card copied and a copy sent to every member by the secretary?
>
> The PRESIDENT: I don't see any harm for the same verbiage, practically, being used and sent out by all the companies to their customers calling their attention to the fact, that this Association is giving them a discount for a payment within ten days and holding them to it, not eleven days or twelve days or thirteen days but holding them strictly to the account of within ten days' period. (Vol. I, p. 448.)

* * * * *

> Mr. LOBER (Vulcanite): I was just about to make the same suggestion as Mr. Israel. We all would like to have a copy of that card. So far as we are concerned I am going to have a similar card printed and used in our business.
>
> Mr. JIGGENS (Giant): So am I. (Vol. I, p. 448.)

Mr. Israel (Coplay) remarked:

> The card strikes me so admirably and it is worded so concise and so clear and emphatic where this discount will be allowed that it is a question in my mind whether it is possible to improve it any. I made the humble suggestion that the words " not ten days after the arrival of the goods " might be underscored in red ink because that would strike anyone in the eye that read it, it would strike them right in the face and they could not very well get away from that. (Vol. I, p. 449.)

And after further discussion, the following views were exchanged by the members:

> Mr. Corbett (Alsen): The United States postmark would be a good guide because there are constant evasions, and if we don't start that thing at the very beginning with absolute strictness there will be one, two or three different delays that will be worked or tried to be worked on you, where they will try to get some extra days in which to have the discount allowed, all of which would be very unfair but which will be very hard to detect and very hard to meet. Whereas if we have something of this kind stated in advance as a guide it might make it easier to meet.
>
> Mr. Israel: Suppose we enter the words " Remittances will be considered as of the post mark on the envelope containing the remittance."

Mr. CORBETT: That is my suggestion, something to that effect.

Mr. LOBER (Vulcanite): Mr. Israel, that very point, the date of the invoice might be taken care of by making that read "The date of the shipment from the mill" which would be the same as the "date of the invoice" with us, and I imagine with most companies.

Mr. COVER (Security): As shown by the bill of lading.

Mr. LOBER: As shown by the bill of lading, yes. There is a point in connection with that cash discount time which I think most of you remember was brought out by the trade relations' committee of the other Association. They say that their counsel—I don't know which company's counsel, but I think it was the Universal Company's, advised that if a cement company as a general proposition held their trade closely to the ten days' time from the date of the invoice in allowing the cash discount deductions and then made one or two exceptions, allowed a customer here or there to take extra time on his bills under one excuse or another, that the car did not arrive, or that they were entitled to ten days from the date of arrival and so forth the statement was that the company was in effect discriminating in favor of such a customer by practically granting them a lower price, and that that was discrimination under the terms of the Clayton Act and illegal. I don't know how that would stand at law, but it is not a bad argu-

ment to use on your customers. I have been using that with very good effect in a number of instances but I don't know how that would go, if we ever should go to court with a court case on that question, I don't know how that would come out.

Mr. Cox (Counsel): I don't know as you would have any difficulty with it, it is good doctrine to help out with anyway if you can make them believe it. (Vol. I, pp. 450–451.)

And the discussion closed with the following:

Mr. Walters (Lehigh): Now, as for these cards, if it would save the secretary some trouble I might send in a supply so that he could send them out if you desire me to do so.

The President: We would appreciate that very much.

Mr. Lober: That would make it much easier for the secretary.

Mr. Israel (Coplay): It might be a good idea to send out also this idea on a slip of paper of a discount of so many dollars and cents that would be allowed if the invoice is paid on or before a certain date. *That will remind us all over again of that idea.*

Mr. Matthes (Alpha): I am having those printed at the present time, I have not got them in the office yet. My intention is to use them as soon as they come in.

Mr. Israel: One of those enclosed as a sample with these cards, it would remind us all again of that idea.

The President: Have you anything to say on the subject further?

Mr. COVER (Security): You will send these to the secretary?

Mr. MATTHES: As soon as I get them I will be very glad to do so. (Vol. I, p. 452.)

At the meeting of May 15, 1916, as to whether payment by note should be considered such a payment as to justify an allowance of discount, Mr. Lober (Vulcanite) said:

> There is a matter that I would like to get an expression on. It has been reported to me that some of the companies in our Association have been accepting notes from their customers, the notes may be thirty or sixty days, the time makes no difference, but the notes read "with interest", and they are sent in to the customer on an average of ten days from the date of the invoice, and some of the companies have been allowing their customers to pay their bills in that way, less the cash discount. I would like an expression from the members here as to the propriety of that method of settlement. I want to say that I personally do not believe that that is proper. I think that the discount is for cash. It may be stated that in sending in a note with interest, the customer can say that you could take the note to the bank and discount it and get the full amount of cash that he would otherwise pay you for your bill. That is true, but the customer is using your credit to get the money, and not his own, and I do not think our companies' credit is for the use of the customer in that

way. I think the customer should use his own credit, and get the cash, if he has to get it, in that way.

The PRESIDENT: The question is open for discussion. (Vol. I, pp. 482–483.)

After some further remarks, the discussion proceeded as follows:

Mr. MATTHES (Alpha): I had an experience recently where a certain contractor wanted to purchase through our dealer, and he said he would buy Alpha cement, provided the dealer would accept from him his notes and allow the discount, and the dealer put the proposition up to us, and we turned it down, and the contractor and dealer both said they could get that accommodation from two of our member companies, and I told our traveling man that we would not agree to it, and they put it up to two others of the member companies, who turned it down also, and the final result was that the business came to our company, and we are getting our payments on a straight ten days cash payment basis.

Mr. LOBER (Vulcanite): We were one of the other companies that had that proposition put up to us, and we wrote the man that made us the proposition that we would not do it. That if he had to take those notes he could take the notes to his own bank and discount them and get the money, and that we could not permit our credit to be used in that way.

Mr. ISRAEL (Coplay): The same thing was tried on our Company, in three or four ways, and we turned the matter down at once.

The PRESIDENT (Giant): *Is there any one in the room that feels that they would do a thing of that kind, or is it the general consensus of opinion that they would not do it?*

Mr. ISRAEL: *I am willing to declare myself, and I say no.*

Mr. GILKYSON (Phoenix): *I have not heard of any such a thing.*

Mr. WALTERS (Lehigh): *I did hear of a case of that kind, and I was in touch with Mr. Matthes, and it is something that the Lehigh Company would not tolerate.*

The PRESIDENT: *Is there anybody in the room who would be in favor of doing such a thing?*

No one declared himself as in favor of this method. (Vol. I, pp. 483–484.)

At the meeting of September 18, 1916, the question of allowing a customer discount when he has a past due account was discussed at great length. It began as follows:

The PRESIDENT (Giant): The subject we were talking of in an informal way, I think we can now have formally discussed, and that was, with reference to the five cents a barrel discount. Whether that should only be allowed to customers who did not owe you overdue accounts. That I think will be inserted in all the forms in the future, but, in

the meantime, it is open for discussion, gentlemen.

* * * * *

Mr. HILLES (Dexter): I am satisfied.

Mr. ISRAEL (Coplay): There are some gentlemen who have entered the room since we had the informal discussion upon this subject, which was informal only because we had no quorum. At a certain given time we had a quorum, and then the matter was brought up by the Chairman, and I made this motion. Now, if the full import of my motion is not clear to anyone who came in the room since this all began, I want simply to say a few words, namely, that the question was put by Mr. Medler, of the Atlas, what do the gentlemen of this Association consider, or what do the companies of this Association consider is the proper practice in a case where a purchaser owes past due accounts—in other words, past accounts overdue—and he undertakes to settle with you those past due accounts by giving you a note or acceptance—I mean, of course, for a certain running time. Does that settlement wipe out his past due accounts, so that he no longer stands in the position of owing past due accounts? Has the situation now been created where there exists no past overdue accounts, and he is, therefore, entitled upon any purchase he may make to the cash discount? Or does he stand in the position of one who owes a past overdue account, and, therefore, is not entitled to the cash discount, because our terms

are, that only such purchasers are entitled to the cash discount who do not owe any past overdue account? Therefore, so as to bring the matter formally before you for discussion, so that no misapprehension will exist arising from it, *I made the motion that it is the sentiment of this Association that one owing a past overdue account is not entitled to the cash discount*, and that a settlement so called, made by note or acceptance, shall not be considered payment of that overdue account, or to repeat, that a purchaser shall not be entitled to the cash discount if a past overdue account remains unpaid, and a settlement by note or acceptance is not payment of that overdue account.

Mr. COPE: May I ask if this is with reference to future arrangements?

Mr. ISRAEL: Sure.

Mr. COPE: Because there are cases, some of us have been talking about where some dealers have a plan to settle their past overdue accounts with a number of cement companies and get on a new basis. (Vol. I, pp. 502–503.)

The discussion was conducted on both sides with marked ability, every phase apparently both for and against the allowance of discount under such circumstances being presented. It finally ended by motion of Mr. Smith (Lawrence) to lay the question on the table so that the consideration could be renewed at a subsequent meeting. (Vol. I, p. 508.)

33562—25——12

The subject was again considered at the meeting of October 16, 1916, when the following colloquy occurred:

* * * As this seems to be rather an important question, I would like to learn the feeling of the members present, as to whether they are allowing the discount if a customer owes you an account still overdue. There was a great deal said at the last meeting, and we would be glad to hear anything further you may have to say.

Mr. COOGAN (Alpha): My understanding is, that no company makes a general practice of doing that. I beleve that there are some who do it, but not all the companies.

Mr. LOBER (Vulcanite): I was not present at the last meeting, and all I know about it, is, what I read in the minutes, and, perhaps, it might be proper for me to make a statement of what I think should be done and what we are doing, because I was not present.

In the first place, in looking over that discussion in the minutes, it seems to me the gentlemen who talked took two different standpoints. Some talked from the Sales Department standpoint, and some from the Credit standpoint, and the difference of opinion came right there.

As far as we are concerned, we believe, from the credit standpoint, that a customer who owes an overdue bill is not subsequently entitled to the discount on his current bill.

As a matter of fact, when a bill comes due in thirty days we are entitled to our money,

and when that customer discounts a later bill in ten days, he is using your money to discount your bill. That is the way we feel about it.

Now, on the other hand, the dealer on a great deal of business—carload business—only gets five cents a barrel profit. There will occasionally crop up instances where a dealer, who is reliable, may be, perhaps, sixty days overdue, and for some reason he is unwilling to take the discount on his regular bills. He may not be in a financial condition to do that. Possibly, he can't borrow the money, and yet he still wants us to continue selling to him. We feel that it is safe to continue selling him carload lots, and, in the meantime, he continues to sell cement to a contractor on a certain job, and that contractor may insist on his having the five cents in ten days, because he could get it from the cement manufacturer if he bought direct. That being the case, if the cement dealer does not discount his bills on that job, he gets no profit. Now, those particular instances, so far as I can see, have got to be handled each on its own merits. I don't think it is right that the man should have the discount when he owes an overdue bill, but, as I say, if you don't make some sort of an arrangement, by offering him a special commission, or whatever you chose to call it, he has got to handle that particular contract, or carload, or whatever it may be, without any profit.

> Now, we have in some very few instances allowed the customer or dealer to discount some bills for that particular reason, and no other, when he has had an overdue account. (Vol. I, pp. 510–511.)

Mr. Jiggens (Giant) after stating that counsel had advised his company that under the wording of its quotations customers had a right to the discount on bills even if they should owe an account which had run for more than thirty days, said:

> That seems to be the crux of the whole thing, whether you gentlemen want to change the wording of your quotations and contracts, or whether you want to leave them as they are, and settle for yourselves hereafter as to whether you will accept the discount or not.
>
> * * * * *
>
> The PRESIDENT (Giant): *You have heard the remarks of all the members present in reference to their feeling in this matter, and it seems to be the consensus of opinion that it is advisable to endeavor to change the wording of their quotations and contracts, if it has not already been done.*
>
> Mr. COOGAN (Alpha): Now, Mr. President, I would like to ask if this is not a matter that is entirely outside of the scope of this organization? Isn't it a matter for the general association? For example, suppose this organization does pass a resolution recommending the adoption of that clause, what are you people going to do with your com-

petitors in the Mid-West, provided the Mid-West do not see fit to adopt such a clause? If we are to have uniformity, the simplest way would be to pass it, the same as this organization, but we don't know whether or not it is going to be adopted generally, or not. In fact, I am in a position to say that I don't think myself, the resolution will be adopted in the Mid-West.

Mr. HILLES (Dexter): I don't think this is a resolution. It was merely an expression of opinion.

Mr. COOGAN (Alpha): The President said it was the consensus of opinion to do so by adding it to the forms.

The PRESIDENT: If the individual company sees fit to do so. Not as a resolution.

Mr. COOGAN: I think, by all working together, you will do more real good and get good results, but I do not think you will get good results simply by adding that to the forms. We know there are cases that it simply would not cure, and it does not seem to me like good business.

Mr. HILLES: I, therefore, suggested this expression of opinion, which was not to be regarded as a resolution, but simply as an expression of opinion, and if the Resolutions Committee of the Protective Association desire to take it up, all well and good. If not, no harm is done.

Mr. COOGAN: I think that it weakens your position, because you gentlemen all admit that there are cases where you have got to

> make an exception, and that they come up, in the general run of business, very seldom. I don't see where you are going to strengthen matters by an expression of opinion.
>
> The PRESIDENT: We feel that we should put the clause in, regardless of whether any other companies do it or not, because we consider that it is essential to our collections, and it is simply a matter for each company to decide for themselves, not as an association matter, but as an individual matter. (Vol. I, pp. 511–512.)

TRADE ACCEPTANCES

At the meeting of June 19, 1916, the Committee on Trade Acceptances made its report, in which it recommended a careful study of the system by each company as affecting its individual trade; and while the Committee unanimously favored the practice involved in the general use of trade acceptances and believed that it would eventually become universal, no radical changes were recommended at that time. (Vol. I, p. 488.) The report stated:

> The value of a definite plan providing for the use of trade acceptances can be readily understood by reviewing the following advantages:

and seven advantages were enumerated. (Vol. I, p. 488.)

In commenting on the report, Mr. Lober (Vulcanite) said:

> . . . so after threshing it all over, as I say, altogether for about a day and a half,

we came to the conclusion that we had better recommend no specific terms—or time, rather, and that it would be more a matter for each individual company to try to work the thing out for the present until it had come into more general use and probably better understood among the trade *and we would then possibly be in a position to arrive at some uniform method of settlement by means of trade acceptances for those accounts which were not discounted.* (Vol. I, pp. 489–490.)

The following views were then expressed:

Mr. SHEPPARD (Lawrence): Mr. Chairman, if we suggest sixty days' acceptances, are we not, the cement companies, starting a movement *that will nullify the thirty-day term?*

Mr. GRIFFITH (Giant): If we send out 60-day acceptances our terms will then be 5¢ per bbl. discount in 10 days or 60 days net.

Mr. SHEPPARD: *If we could get together on terms,* make our terms a little longer than they are, net terms of sixty days instead of thirty days, there would be no objection to a sixty day acceptance.

Mr. BROWN (Alpha): It seems to me the committee did not realize that they were actually proposing to extend our terms to sixty days. The first proposition offered to me, was nothing in the world, as I look at it, *but changing our terms from thirty to sixty days. I have either been fortunate enough or unfortunate enough to have gone through*

the period of changing from sixty to thirty-day terms, and I do not want to see anything done by the credit men of the cement industry that will in any way tend towards the sixty-day terms. I think everything done should be along the line of making it a cash basis and not a credit basis, and where credit is given to customers, they should pay interest. (Vol. I, p. 490.)

* * * * *

Most people won't pay interest unless they are forced to through the courts, and I don't believe—I want to emphasize this—we ought to do everything to indicate thirty days is long enough for a man who buys our cement. *I ask you all to do that. I tell you, gentlemen, it is a step backward, a back step. It took us years to come from sixty to thirty days and we don't want to go back from thirty to sixty days.* (Vol. I, p. 491.)

* * * * *

Mr. ISRAEL (Coplay): I am not informed of the discussion that took place at the meeting of the committee, and I may be saying something that certainly occurred to them, and they threshed it out thoroughly and came to the conclusion there was not anything in it, and if I am guilty of doing that, it will be done honestly. When Mr. Brown addressed himself to the proposition of sixty days, and I fully agree with him that we ought not do anything in the world *to get back to sixty days after that struggle we had to get near thirty days*—Mr. Hilles promptly replied, was there anything in the report

about a sixty-day acceptance; then it occurred to me how would it work out to let the purchaser of the goods have the alternative of discounting, getting five cents a barrel off and giving a thirty-day acceptance? I would like to hear some members of the committee on that, that is, whether they did discuss that and if they did and turned it down, why? (Vol. I, p. 491.)

In the discussion, Mr. Medler (Atlas) remarked:

Then, finally, the thought came we have not tried out for one season the five cent a barrel discount, *and the conclusion was to work a whole season under the five cent discount and see at the end of that period just what percentage of those customers remained slow pay.* We may then take some very effective means of correcting whatever abuses there are in our terms of sale.

Mr. ISRAEL (Coplay): *The last suggestion seems to me pregnant with good sound meaning and sense.*

* * * * *

I think the sensible conclusion to come to is to let's try it out and see, and then perhaps, after a while, the ones discounting will be great in number, and those who do not will be insignificant.

Mr. GRIFFITH (Giant): *If that is the feeling of the members I suggest the matter be referred back to the Committee to report at the next meeting.*

Mr. ISRAEL: *If the idea is to try out the five cent discount and see how that works*

for a whole season—which I think is an excellent idea, as I said, why not lay this report on the table and then we can take it up any time we please, three, six or nine months from now. It won't require the appointment of another committee to report. We can take it up any time. I move the report of the Committee on Trade Acceptances be laid on the table.

Mr. GRIFFITH: *All in favor say aye.* (*Ayes.*) (Vol. I, p. 492.)

But after this motion had been carried, Mr. Lober (Vulcanite) remarked:

I want, before leaving the subject, to repeat what I think I said in my former remarks when you asked me to say something for the Committee. The Committee feels that for the present, at least, *it would be desirable that the trade acceptance matter be pushed by individual effort of the companies, and we could then see later on what success the individual companies who tried it, had with it, and that would undoubtedly be a help in arriving at some uniform method of using the acceptances when the Association feels they are ready to adopt some such method.* I know some of the companies are using them, some of them intend to try them, and I hope as many as possible will try them out during the summer, and after we have had this season's experience with the five cents discount and get to the point where we will know more closely how many customers will discount and how many will not,

we can then take up the trade acceptance matter much more intelligently and will have more experience. (Vol. I, pp. 492–493.)

EXTENSION OF CREDIT

A discussion closely related to and partly involving trade acceptances was that of extension of credit, and upon that subject at the meeting of May 15, 1916, Mr. Jiggens (Giant) said:

> I believe that if the question was asked of the credit man, "Why do you allow Smith to take five months in his settlements?" the reply would doubtless be "That is the best I can do with him," and *if you ask, "Why do you continue to sell him?" the reply is likely to be "Because if I don't, some other fellow will."*
>
> *The long extension of credit granted is practically a rebate, and is, in my opinion, equivalent to a reduction in price, or full allowance for all bags returned.* It does seem that so long as credit terms are thirty days, that extensions should not be granted over a period exceeding sixty days from date of shipment.
>
> The times are opportune for us to try and get settlements on a business-like basis, and be willing and courageous enough to suspend shipments when terms are generally extended as before mentioned.
>
> The Trade Acceptance form, as suggested by the Federal Reserve Bank, is likely in time to become more generally adopted in a number of industries, and it does seem

that now, that we have a Cement Protective Association, we should be able to help forward this movement, which not only will tend to guard against over-buying, but will also obviate the necessity of the salesman and credit department dunning for money. Where we are dealing with customers who always discount or pay promptly in thirty days, there would be no need of using the acceptance, but where settlement dates are invariably uncertain, an acceptance sent with bill or monthly statement might result in material benefit.

Mr. ACKERMAN (Lawrence): Do I understand that no one is to be sold to who does not agree to this sixty days?

Mr. JIGGENS. No, the terms are now thirty days. IF WE GRANT SIXTY DAYS WE ARE GRANTING A MAN A HUNDRED PER CENT MORE THAN OUR REGULAR TERMS, and IF WE ALLOW HIM TO TAKE FOUR AND FIVE MONTHS, to settle his bill, IT IS EQUIVALENT TO GIVING HIM A REBATE. (Vol. I, pp. 479–480.)

The discussion ended with the following:

Mr. HILLES (Dexter): That is what I was going to propose, but some of the gentlemen are not in favor of that. But that is good policy, and proper trade practice. *Can we not establish it as a basis of working, approved by us all, that it is the sense of the members of this Association* that all accounts over thirty days, when written to, shall have called to their attention that there is in existence a form of discount which they

can take advantage of, and in the event of their not taking advantage of it, that we would take steps to attach the trade acceptance to the next statement that we send, or to introduce it in some proper way to be outlined by the committee. I have written perhaps fifty letters in the last year, along those lines, and none of them have exactly satisfied me, and none of them satisfied the fellow I wrote to, *but I think we can formulate some general method that will satisfy everybody.*

The PRESIDENT: I would like to hear further discussion on this subject.

Mr. HILLES: I have been trying to digest some of the remarks that I have heard, and I move that a committee be appointed to consider this very important subject that Mr. Jiggens has proposed, and report with one or more plans at our next meeting, some method of recommended procedure.

Motion seconded and carried unanimously. (Vol. I, pp. 481–482.)

BIN CHARGES

A very interesting and significant discussion was had in relation to bin charges at the meeting of March 20, 1916. This subject was introduced by the following remarks by the president:

> Gentlemen, it has been suggested by a certain member of the Association, that some definite action be taken in reference to the bin charge, and that the wording on all quotations—there should be some wording on all quotations stipulating that if cement

> is to be held and tested on the mill that it is to carry a charge of 3 cents a barrel. I should like to have the feeling of the members in reference as to whether it would not be a good idea to have on all quotations, wording something as suggested by this member. *Would it not be well to have a 3 cents a barrel charge put on, call it a bin charge, on all quotations on cement held at the mills.* That is a particular statement which is made to me, that there should be a charge made and stated in the quotation as a bin charge. (Vol. I, p. 456.)

Thereupon Mr. Israel (Coplay) suggested that the subject did not come within the purview of the Constitution and purpose of the organization and said:

> I would like the chairman to solicit the opinion of our counsel who is present and be guided in that respect.

Counsel remarked:

> I think the point of order is really well taken. It is not within the constitution and by-laws. (Vol. I, p. 456.)

Thereupon Mr. Brobston (Dexter) said:

> Mr. Chairman, I might suggest that possibly I might bring that motion or suggestion within the proper limits of the discussion of this meeting, if it was simply made that a statement of any charges that are made for the bin charge should be included in the form of quotation we are using *for the purpose of securing a uniform quotation:* That any

charge that is made for holding cement in bins should be noted on that quotation sheet. Would you feel that that would come within the proper limits, Mr. Israel? (Vol. I, p. 456.)

And after some discussion of that phase of the subject, the following colloquy passed between counsel and some of the members:

Mr. Cox: Well, does not that rather relate to the trade practices with which the other Association deals, than it does with anything that we are doing here.

Mr. ISRAEL (Coplay): No, the members of this Association all of them are selling cement. Now *in quoting they desire to have some uniform practice in that respect.*

Mr. Cox: Yes, but thus far, as I understand it, this Association has not had anything to do with trade practices. That has been left to the National Association which has been drawn up in a sort of educative form of quotation, etc.

Mr. ISRAEL: *Well, we do deal with business practices of this kind; we decide that it is a good thing to accelerate the collection of our accounts, to allow a discount of five cents a barrel.* We decided that it is a good thing in order to protect ourselves against incurring indebtedness, uncollectible or partially so, to exchange information as to our experiences with the different persons to whom we sell; we adopted that proposition, and so it seems to me it falls under the business practice.

Mr. Cox: The point I make of that is that is a matter of the National Association, which deals with these trade practices. Thus far we haven't dealt with them at all as an Association. It is upon Page 10 of the report of the committee on trade conditions of the National Association.

Mr. Brobston (Dexter): Mr. Chairman, I think this matter is absolutely very clearly pointed out and the suggestions as made are certainly covered in the objects of this Association. The object of the Association is *for the collection and dissemination of such proper information as may serve to protect each manufacturer against misrepresentation and imposition and enable him to conduct his business as he feels he should do so free from exaggeration and the influence of false and insufficient information.* IF WE DON'T KNOW WHETHER A QUOTATION INCLUDES A CHARGE FOR A BIN TEST OR DOES INCLUDE A CHARGE FOR A BIN TEST, WE CERTAINLY HAVE INSUFFICIENT INFORMATION; and this is an effort to see whether we do have proper information as to whether a quotation be so made as to include a bin charge or whether it does not. It certainly seems to me that comes within the scope of this Association. (Vol. I, pp. 457-458.)

And after further remarks passing between counsel and Mr. Brobston (Dexter), Mr. Israel (Coplay), and Mr. Dutton (Bath), the discussion proceeded:

Mr. Brobston: I read from the by-laws of the Association which says: "To keep us

free from misdirection by false or insufficient information." *I only want the members of the Association to be able to put themselves in a position where we won't be getting insufficient information in regard to other contracts of other people.*

Mr. ISRAEL: Suppose you were to go to a dealer and he were to say to you that Company X had quoted him a certain price whereas in truth and in fact this was not so. Perhaps no price was quoted at all, perhaps a greater price was quoted than what the dealer stated. That would be false information and whether you would have a right to protect yourself against that or not is a matter which involves a question I would like Mr. Cox to answer.

Mr. BROBSTON: I will put it in another way then, in reply to Mr. Israel's statement; we are reporting these quotations or contracts as they are made to the Association. *We certainly should have our contract in form, so that we can tell whether it has a bin charge attached to it or whether it does not have a bin charge attached to it.*

Mr. ISRAEL: Now is there any objection to that?

Mr. COX: *No objection at all to include* in the report that you are now making the Association, any *information as to whether the price that is reported includes bin charges or not.*

Mr. ISRAEL: Now we have it.

Mr. COX: But when you speak of a quotation distinct from a transaction heretofore

which *had been* recorded, you open another and a different field.

Mr. ISRAEL: That is right. Suppose, Mr. Brobston, you be kind enough to make a motion then that the records sent to the secretary shall state as to closed transactions whether it includes the bin charges or not?

Mr. BROBSTON: I move you, Mr. President, that the reports sent to the secretary of the Association shall state whether they include a charge for bin testing or not.

Mr. COVER (Security): I second the motion.

Mr. COOGAN (Alpha): Would that be necessary on every job that I report on, every contract that we report, to make a notation on it, if it does include the bin charges?

Mr. BBOBSTON (Dexter): I should say not, I should say that when you reported a contract that included bin charges, you specifically should say so.

Mr. COOGAN. The omission to state whether you include bin charges or not would mean what?

Mr. BROBSTON: *If nothing is mentioned, it is assumed there is no charge for bin testing* because if we adopt this motion that the bin charges should be specified, why then they would be stated if any were included.

Mr. ISRAEL (Coplay): The only report made to the secretary for the bin charges or testing charge, that is if there is one, it shall be so specified and so stated, is that right?

Mr. BROBSTON: That is correct.

Mr. ISRAEL: I will second the motion.

The PRESIDENT: Gentlemen, you have heard the motion. All those in favor will say "Aye." (Ayes.) Contrary "No." So ordered. (Vol. I, pp. 458–459.)

Thus precisely the same result was accomplished in a way different from that first proposed; that is, it was first proposed *that the members agree* that they would all make an extra charge whenever cement was held for the purchaser in the bins; and to meet the objection that such action was outside the province of the Constitution, a motion was carried to require the members to report whether or not they were charging for the use of bins. Every member understood what that meant. *And how does it tend to prevent frauds being perpetrated upon the companies for them to report whether they are exacting a bin charge or not?*

COST ACCOUNTING.

This subject was discussed at the meeting of July 17, 1916; and the following remarks by Mr. Israel (Coplay) are quoted because they show the close relationship between the members:

> Mr. Chairman, there are sixty-five or more cement manufacturing companies in the United States of America, and it is not at all surprising there should be a great diversity of view. Those sixty-five companies are scattered all over the United States, with the exception of those represented around this table today. *We are in close*

touch with each other and we can agree upon something in less than a month. We have done things as important as this and we can do this. There is nothing about arriving at a system and method and formula for determining your costs that is so mysterious or so difficult that you need to be afraid to undertake it. If it were not so important I would not be urging it, but it is very important. I am backed up in my opinion by Mr. Hurley, the Chairman of the Federal Trade Commission, and I think we are all willing to concede he knows what he is talking about. He mentioned it as a most important thing, and we have not touched it. We are here for the purpose of giving information to each other, and here is the most important matter of all. We say "Well, we don't act on this because the National Cement Association hasn't acted." *We have done many things every year where there was a great diversity of view*; there isn't that difference here. We can agree on things we have a right to agree upon. We have a right to agree upon a proper formula for determining cost and to go at the thing and do it *just like we have done other things here, and before you can say "Jack Robinson" it will be done.* (Vol. I, p. 498).

From the foregoing quotations taken from the Association's minutes it is seen that there was hardly a phase of the entire cement industry that was not considered in the meetings, and upon many of the most important matters an understanding

as to what practice would be pursued by the companies was reached. With representatives of defendants meeting from month to month, revealing to each freely and frankly their practices, exchanging views as to the virtue of the respective practices when there was any difference, and often formally agreeing upon a particular practice, *could there be anything but uniformity in all the customs of the trade, and was there a shadow of a chance for any real competition to exist among them?*

XI

NO SUBSTANTIAL COMPETITION AMONG MEMBERS OF THE ASSOCIATION IN PRICES AND TRADE PRACTICES

A number of witnesses connected with the cement industry testified with reference to the practical uniformity as to prices and the important trade practices; and to avoid the necessity of referring to the record a succinct statement of the material parts of their testimony will be given:

LUTHER KELLER, a dealer of Scranton, Pennsylvania. He has sold cement for the Atlas, Saylor's (Coplay), Giant, Vulcanite, Edison, Phoenix, Bath and Nazareth. Handles specific job contracts, in some of which the cement passes through his yard and in others is delivered direct. He said:

> Since 1916 prices have been practically uniform. I don't know of any variation that has occurred in recent years; prices have been the same; that is, the quotations have been the same—and the prices. The discounts are the same—ten cents a barrel if paid within ten days from date of invoice. It is the same rule by all the companies. In regard to acceptance, I think generally I am given fifteen days to accept a quotation but that is frequently extended. Some companies have been a little more generous than others in that respect. There is no

difference in the contracts that I am required to make by the several companies as to the terms and price. I don't know how those contracts read, really, but as to terms of payment, there is no difference. In regard to the allowances for returned bags, the bags are returned freight prepaid and the count and inspection at the factory is to be accepted. The amount allowed for bags returned by the several companies is ten cents—generally the same. With reference to bin tests, there is one brand of cement that we handle that we generally pay six cents a barrel more, for what is known as the autoclave test. That brand is Nazareth. (Vol. I. pp. 172–173.)

EUGENE L. MERRIMAN, a dealer of Scranton, Pennsylvania, has handled cement for thirty years. He said:

I have been handling seven brands in the last six years, Alpha, Dexter, Allentown, Lehigh, Edison, Penn-Allen, Giant and Pennsylvania. The prices which they have quoted me have been practically uniform. When one would change usually in two or three days we would get the changes from the others.

The terms of discount are 10 cents a barrel, dealer's discount in 10 days. There is no difference as to that between the different companies.

We are allowed a credit for bags at the price they are charged. There is not usually any difference in price allowed by the several

companies. There have been times when some of the cement companies did not advance their price on bags when the others did. The Whitehall Company I think did not advance the price on bags. It is not one of the defendants in this case.

I buy my cement f. o. b destination. I usually am allowed 15 days to accept the quotation by all the manufacturers. They extend, however, on request, a further period where you quote on contracts. When there is a change of price I am never notified of it in advance. The terms of the contracts I make with these several companies are practically the same.

A blanket contract as I interpret it is a contract that provides for a certain amount of cement to be taken in a specified time, but to be used where you choose to place it. There was a time when I could get a blanket contract. That is several years ago. I can't get a blanket contract from any company. They have cut out that practice of giving blanket contracts in the neighborhood of fifteen years ago. They have not been allowing it since that time. (Vol. I, p. 176.)

Bert H. Hanby, a dealer of Batavia, New York, has handled cement about fifteen years. Highest 20,000 barrels a year. Always handled Alpha, and have been handling Atlas about two years. During that time the prices quoted by the two companies have been uniform. Allowed ten cents a barrel discount for cash within ten days, usually given fifteen days to accept a quotation. Contracts with the

two companies are about the same. Both allow ten cents credit for return of bags. Has been quoted cement by other companies besides these two and doesn't think there has been any difference in prices quoted. If the cement is bought under contract they have to specify where it is going and what it is going to be used for. (Vol. I, pp. 177–178.)

EDWARD M. RODROCK, a dealer of Paterson, New Jersey.

> For the last six or eight years there has not been any difference in the price of cement that has been quoted to us by the several companies at the same time. Salesmen of these various companies call to see me very often. I have not had periodical quotations from the cement companies whom we have not been representing. Salesmen from the other companies, nearly all of whom I know, come in and make quotations. There has not been any difference in the prices quoted to me by the salesmen of the companies.
>
> The discount I am allowed is 10 cents a barrel for cash in ten days from date of invoice. There is no difference in that custom between the several companies. There is no difference so far as prices and terms of payment and discount are concerned between the specific job contracts of the several companies.
>
> The allowance for bags returned at the present time is 10 cents each. There has not been any difference between the allowance from the several companies.

> So far as I am concerned it makes no difference from which one of the companies I buy cement. There has never been one of them that has offered me cement on better terms. Now and then we buy cement from the several companies because we have customers demanding that particular brand of cement. One customer will like one brand and another customer another. (Vol. I, p. 179.)

ALLEN P. LOCKWOOD, a dealer of Buffalo, New York, engaged in the retail builders' supply business. From April, 1917 to July, 1920, was salesman for the Hercules Cement Company. Since then has been selling principally for the Lehigh, but also Penn-Allen, Knickerbocker, Alpha, and a little Atlas. The prices quoted him at any one time since July, 1920 have not been any different. He was salesman for the Hercules and did not have any authority to change the price of cement. He figured the price " by taking the mill base plus the freight rate to Buffalo, or wherever the point may be, adding bags. I would ascertain the freight rate by a freight rate book I had." (Vol. I, p. 183.)

> The Hercules was a new company. I went with them in April, 1917. They put their cement on the market in June or July, 1917. We were underselling the other fellows a little bit. I think we did that throughout all of 1917 and maybe the early part of 1918. After that I often suspected there was a difference between the prices of the Hercules

cement and the other cement, but Hercules was the same price as you would consider the market price of cement after that time. I have not handled Hercules since I have been a dealer.

Since I have been a dealer the quotations have been the same with all of them. There has not been any difference with reference to trade discount or cash discount. The terms are 10 cents a barrel cash discount in 10 days, 30 days net. The prices for returned bags have been changed once or twice, and I think they all changed about the same time. The specific job contracts as to terms of sale and the discount, and so forth, are practically the same. The wording might be a little different. The substance is the same so far as I know. (Vol. I, p. 183.)

HARRY GILBERT engaged in selling builders' supplies in Germantown, Pennsylvania. Last six or eight years has handled six or eight different brands, Nazareth, Edison, Pennsylvania, Vulcanite, Universal and Atlas. The last three years has handled principally Lehigh and Bath.

There has not been any variation in the prices that those two companies have offered me during the three years. The price was usually the same when I was handling the other brands of cement. There was one time when some of them offered it cheaper than the others. I think it was about 1915. I was then offered cement at different prices. Since that time the quotations have all been the same. The discounts have been 10 cents

a barrel, 10 days. There was no variance in that respect between the companies. The credit allowance for returned bags had been the same. I was allowed fifteen days to accept quotations by all of them. It does not make any difference to me or my patrons from which company I buy so far as price is concerned. I have never purchased in less quantity than carload lots. There is no difference so far as terms of payment and prices are concerned in the specific job contracts of the several companies. (Vol. I, pp. 185–186.)

JOSEPH H. CLARK, dealer in builders' supplies in Philadelphia for about six years. He handled Vulcanite for first two years and since then principally Lehigh and Atlas.

There has been uniformity of price at the same time between the companies. Quotations made by the Atlas and the Lehigh Companies at the same time were the same. The Atlas Company allowed 10 cents a barrel for cash within ten days; the Lehigh the same.

As to the allowance for bags returned, the companies at different times allowed different prices, just according to what the charge had been. There was no difference between the two companies as to credits for returned bags at any particular time. The time allowed for accepting the quotation was the same with the two companies. The specific job contract forms as to prices and terms of payment were the same. When I handled Vulcanite its prices did not vary from the

others, nor its discounts, nor allowances for returned bags. I am allowed 10 cents a barrel differential on specific job contracts, and that is the same with all the companies I represented. (Vol. I, p. 187.)

JOHN H. KELTER has been for twenty-five years selling builders' supplies in Philadelphia. Has been selling for Penn-Allen, Bath, Lehigh and Coplay for the last fifteen years and has also sold Atlas, Alpha and some Phoenix.

We get a notice from one company or some company of a change in price, and three or four days afterwards the rest of the companies send us a notice meeting that price, whether it is a rise or a fall in the market. From that time up to another change there is no difference in their prices.

In regard to cash discounts, there is no difference, 10 cents a barrel in ten days from date of shipment. With reference to acceptance of quotations, their custom is fifteen days to accept, without we request longer.

Other companies occasionally send quotations to me. Other companies send their salesmen to me.

There is no difference in the amount that each will allow for returned bags. There is a change from time to time in the price. All bags are marked by the different companies they belong to with the returned price, 10, 15 or 25 on each bag, and the company's brand on the bag. (Vol. I, p. 189.)

ALFRED L. LYTH has been selling builders' supplies in Buffalo, New York, for eighteen or twenty years. Has been handling Lehigh for seventeen years, and Giant, Knickerbocker and Hercules for three or four years. While he has been handling those brands, the prices quoted by all the companies have been uniform. Salesmen from other companies came to him trying to sell cement. There was no difference in the price at which they offered to sell cement and the price which he was paying. The prices were lower in 1913, 1914, and 1915. They were all the same at about the same time. There has been no difference in the requirements of the companies as to cash discount or in their allowance for returned bags or with reference to the time within which an acceptance is required. Taken at the same time, the terms and prices offered at which cement has been sold to him have been the same. (Vol. I, p. 191.)

HUGH NAWN, a contractor of Boston, Massachusetts: His firm uses from 25,000 to 150,000 barrels of cement in a year. In 1919 they had a contract for the Gilboa Dam in the Catskill Mountains, and contracted for cement with the Whitehall (not a member) and Nazareth Companies. His contract with the Whitehall Company was at $2.83 a barrel, and with the Nazareth at $3.06. He received quotations from three or four other companies, one of which was the Atlas, and they all quoted at $3.06. They from time to time receive quotations for cement, and the prices are usually the same, the in-

stance mentioned being the only one when the price was different. As he remembers, the discounts are the same; also the prices for bags, although they might fluctuate from time to time. (Vol. I, pp. 217–218.)

WILLIAM F. FELTON, a general contractor of Buffalo, New York: He purchases cement through dealers, but occasionally gets quotations from the manufacturers; and salesmen call on him. The prices quoted by the manufacturers and their agents and dealers have been the same. He has endeavored lately to buy cement from three or four manufacturers, but found no difference in prices or in the terms of discount, or price for the return of bags. The only reason he buys from one rather than another is that he may prefer one party over another. He filed quotations from the Giant, Coplay, Lehigh, Vulcanite and Whitehall Companies, all of which were the same except the Whitehall. After deducting for sacks that Company's bid was 10 cents higher than the others. (Vol. I. pp. 219, 220. See Gov. Exs. Nos. 256–260, vol. II, p. 670. Side pp. 1366–1370.)

WALTER P. WRIGHT, a builder of Richmond, Virginia: This concern buys through dealers but receives bids from cement manufacturers and their sales agents, and also inquires of them and dealers about the price of cement. At the same time, there is no difference between prices quoted them by the various manufacturers. That has been so since

1914. The discount offered is also the same, as is the price allowed for bags returned. (Vol. I, p. 220.)

THOMAS HANRAHAN, a building contractor of Schenectady, New York: He has received most of his quotations from dealers, but on different occasions has received quotations from manufacturers and their salesmen. They have been practically the same with the exception of one occasion, where the Lehigh quoted 5 cents less. That was in 1919, and the difference related to something about the freight rate, but he didn't know what it was. He has no recollection of any difference in prices quoted by manufacturers, with that one exception. There is no difference in the rate of discount or in credit for sacks. (Vol. I, p. 220.)

WILLIAM WHITE, in the sub-contracting business in Philadelphia: He buys cement mostly from the manufacturers; and they quote him direct, and also send their sales agents to him. "There isn't any difference between the quotations to me at the same time for the same job by these various manufacturers. There is no difference as to discount or as to the price of returned bags. That has been so since I have been doing business." (Since 1915.) (Vol. I, p. 221.)

JOHN O'CONNELL, Treasurer and Purchasing Agent of the Harrisburg Railways Company, Harrisburg, Pennsylvania: Has been purchasing cement for about fifteen years. Possibly 4 or 5 manu-

facturers have been quoting him. His experience has been that there has not been any difference in price with those he has been dealing with, principally the Vulcanite, Atlas and Lehigh Companies. His recollection is that the price of returned bags has been the same. (Vol. I, p. 222.)

CLYDE C. OAKLEY, building contractor, Newark, New Jersey: Has received quotations from Alpha, Atlas, Lawrence, Lehigh, in fact, most of the cement companies. He has found no difference in prices since back around 1914. The discounts are the same, as is the price of returned bags. (Vol. I, p. 222.)

GEORGE W. KRIEGER, JR., contractor, Poughkeepsie, New York: Since 1916, has received quotations from manufacturers and dealers. Manufacturers send their agents to him. Prices quoted by the manufacturers at the same time have been the same; and the rate of discount and the amount allowed for return of bags have also been the same. (Vol. I, pp. 222–223.)

LESTER C. NESBIT, for four years auditor and purchasing agent for G. W. Ensign Company, Contractors, Harrisburg, Pennsylvania: In most cases they buy direct from the manufacturers. The manufacturers quote them direct, and they also see their sales agents. The price given by the manufacturers is the same, as he remembers, as are also the discounts and price for returned bags. (Vol. I, p. 223.)

On cross- and re-direct examination he cites one or two instances when there was a cut in price by the Bath, and also by the Security. Bath gave a lower rate of about 16 cents in November last (1921) after this petition was filed. The cement was billed to him through a dealer, and "*We were asked to keep that a secret.*" (Vol. I, p. 224.)

JOHN L. SHADE, purchasing agent, Viscose Company, manufacturers of artificial silk, Philadelphia, and was previously assistant purchasing agent for the Philadelphia Electric Company: For the past four or five years he has bought about half a million barrels of cement. He received quotations from possibly ten different companies. There has been no difference in the quoted price at the same time. Discounts were uniform, and the price of returned bags were the same. He also related an incident, which has been heretofore referred to, about endeavoring to buy cement for use at Roanoke. The Lehigh would make no difference in the price of its cement delivered from Fordwick, a point nearby, and that delivered from the Lehigh Valley. (Vol. I, pp. 224–225.)

A. LEE GROVER, secretary and chief clerk of the State Highway Commission of New Jersey: In 1919 the Commission wrote various manufacturers of cement east of the Mississippi River for prices of cement f. o. b. plant. (Vol. I, pp. 225, 226.)

It received replies from about twenty companies, including a number of the defendant companies;

and replies from thirteen of the defendants were filed as Exs. 324–337. (See vol. I, pp. 673–684.) These replies are exceedingly interesting, viz:

The Allentown Company stated:

> We note you ask for price f. o. b. the plant, but our policy has always been to make a delivered price in order that we can compete with other cement manufacturers. (Gov. Ex. 324, Vol. II, p. 673.)

The Alpha Company stated:

> Our past experience has shown very conclusively that dealers and consumers of cement are not interested in our f. o. b. mill. They require in practically all cases a price delivered at destination. In view of this general demand on the part of our trade we have put in the policy of quoting prices delivered on cars at destination. There are other reasons why a mill price is not practical. As all, or at least a very great portion, of our cement must of necessity be distributed through dealers, and if we were to quote mill prices it might easily interfere with the established custom of dealers distribution. *If we quote mill prices, then the cement becomes the property of the purchaser at our mill and could be shipped to any point designated by him and we would have no further control over the shipment.* You will readily see that this would conflict with the present method of distributing cement through dealers. (Gov. Ex. 325, Vol. II, p. 674.)

The Atlas Company stated:

> Our prices are quoted f. o. b. cars destination based on $3.00 per barrel at our plant at Northampton, Pa., plus freight. (Gov. Ex. 327, Vol. II, p. 675.)

The Coplay Company stated:

> It is difficult for us to give you a price f. o. b. plant, without knowing the destination where the cement will be used. (Gov. Ex. 328, Vol. II, p. 676.)

The Dexter Company stated:

> * * * it is not our policy to quote prices or sell our cement f. o. b. our plant at Nazareth, Pa. Our quotations are made on a delivered price basis f. o. b. destination. (Gov. Ex. 329, Vol. II, p. 677.)

The Edison Company quoted a price f. o. b. its mills at New Village, N. J. (Gov. Ex. 330, Vol. II, p. 680, side p. 1394.)

The Giant Company, after first making inquiry as to the "point of delivery" and being advised that the Commission desired a price f. o. b. mill, stated:

> * * * we have always found that to name other than a delivered price means endless confusion to our friends, as they are then obliged to secure freight rates to different points to show the actual cost to them. Another reason that we refuse to quote other than a delivered price is that the policy of this company has been not to quote a dealer for delivery outside of his own town,

and therefore *if we named a mill price to our dealer we felt that he could order the cement diverted while in transit if it was billed to him at a mill price, while by billing it direct to a given point it could not be done under our quotation.* (Gov. Ex. 331, Vol. II, pp. 680–681.)

The Knickerbocker Company stated:

> * * * we are unable to quote you prices which would be attractive as the freight rates from our mill, which is located at Hudson, N. Y., to points in New Jersey are so high that we cannot meet the competition there and secure sufficient revenue to show us a profit on our product. (Gov. Ex. 332, Vol. II, p. 681.)

The Lawrence Company quoted a price f. o. b. its mill. (Gov. Ex. 333, Vol. II, p. 682.)

The Lehigh Company stated:

> * * * our practice is to quote all prices f. o. b. point of destination at which the material is to be used. (Gov. Ex. 334, Vol. II, p. 682.)

The Penn-Allen Company stated:

> We do not quote mill prices but make all quotations f. o. b. destination. (Gov. Ex. 335, Vol. II, p. 683.)

The Phoenix Company stated:

> It is not our custom to quote prices on Phoenix Portland Cement f. o. b. mill, but rather to quote prices delivered at destination. For your information, however, you

> are advised that our present mill basis is *$3.00 per barrel* including the bags. Our quotations are made invariably, however, f. o. b. destination, and our present price at Trenton is $3.37 per barrel. (Gov. Ex. 336, Vol. II, p. 684.)

The Vulcanite Company stated:

> * * * it is against the policy of this company to name prices f. o. b. our plant. This we have consistently declined to do for the United States Government, railroads under government control, contractors doing Government work or railroad work, or anyone else. (Gov. Ex. 337, Vol. II, p. 684.)

In response to a circular letter dated March 15, 1921, requesting bids on 2,625 barrels of cement for use at Rahway, New Jersey, the Commission received quotations from the Edison, Vulcanite, Pennsylvania, Alpha, and Atlas companies, and from George M. Friese, a dealer at Rahway. (Gov. Exs. 339–344, Vol. II, pp. 685–688 and side pp. 1406½–1409 and 1414–1415.) These quotations ranged from $3.48 per barrel quoted by the Edison Company, to $3.63 per barrel quoted by the Atlas and Vulcanite companies. In connection with the different quotations submitted by these companies indicating competition, it is deemed proper to point out that the five cement manufacturing companies which submitted prices had been indicted on March 1, 1921, for violation of the Sherman Anti-Trust Act.

THOMAS S. SULLIVAN, chairman, Boston, Transit Commission, and since July, 1918, a member of the Commission: In 1916 he received bids from Allentown, Lehigh, Alpha, Coplay and Atlas Companies. Every company quoted $1.87 per barrel of four bags, and each company offered to allow 10 cents a bag for each bag returned, with freight prepaid to mill, and also a discount of 5 cents per barrel for payment within ten days. (Vol. I, p. 229, Gov. Ex. 348–352, vol. II, pp. 689–697.)

HOWARD E. CHURCH, supervisor of purchasing for Fred T. Ley Company, General Contractors, New York City: They buy through dealers, but have tried to buy from manufacturers. Outside the metropolitan district they usually purchase through their own cement supply company, located at Springfield, Massachusetts. He also inquires of cement salesmen how the market is. Prices of the several cement manufacturers at the same time are usually the same. (Vol. I, pp. 230–231.)

FRANK B. TALLEY, purchasing agent for the Foundation Company, New York City: They buy through dealers. Has talked with representatives of the Atlas, Vulcanite, Lehigh, Pennsylvania, Giant, probably one or two others. In making their prices, there has been no difference in their dock price at the same time, or in the price of returned bags. For jobs outside the city, in two or three instances, the Whitehall Company (not a member) quoted them lower prices. (Vol. I, pp. 232–233.)

RUDOLPH MEYER, purchasing agent for Thompson-Starrett Company, New York City: Buys exclusively through dealers, but "We always wrote the manufacturers and the dealers in connection with every decent size job, any large jobs we had. The manufacturers sent us quotations on the letterheads. I don't think their prices were cheaper than the dealers' prices. *We were not able to buy directly from the manufacturers.* I talked with the salesmen of various manufacturers, Pennsylvania, Atlas, Hercules, Alpha. I asked them at different times whether they would sell direct and they said 'No.' I don't know as there was any particular reason given." (Vol. I, pp. 233, 234.)

SOLOMON HOLZER: Was in the export business and bought mostly from the Edison and Coplay companies. Got prices from other companies. There was no difference in the prices offered at the same time. The discount was always 5 cents a barrel for cash. (Vol. I, p. 234.)

EDWARD A. KEELER, building contractor connected with the Peter Keeler Building Company, Albany, New York: Up to three or four years ago would send circular letters to possibly half a dozen selected dealers of cement companies and received quotations from Glens Falls, Helderberg, Knickerbocker, Edison, Atlas and Alsen's; and he does not recall any difference in the quotations up to three or four years ago, or in the price of returned bags or discounts allowed. For the last three or four years has been calling up over the 'phone or writing

for prices; *recently* there have been some slight differences in prices delivered to the operation, but no difference in prices delivered f. o. b. cars. He remembers one instance in the fall of 1919 when the prices quoted were the same f. o. b. Troy, but there was a little difference in the price f. o. b. at the building. The maximum difference was about 5 cents. He also cites an instance or two where he induced the company to guarantee against an increase in freight rates. (Vol. I, pp. 240–241.)

From the testimony of the witnesses representing the contractors and builders of New York City, there undoubtedly was an understanding between the manufacturers that cement to be delivered within the metropolitan district of New York would be sold only through dealers.

Walter Lewis, a Government accountant, testified that he had prepared a statement based on Form 10, which is the printed list issued quarterly of the contracts reported to the members on the daily sheets, and shows every specific job contract in force at the time of its publication. He used the reports for the years 1919 and 1920, and up to March, 1921, and checked a total of 928 transactions which were selected at random. Those transactions reported shipments to 591 towns in various states. He deducted from the delivered price the freight specified in the rate books and also the bag price applying at the time the contract was made, and thus arrived at the mill base prices at Lehigh Valley, Universal, Hudson and

Fordwick. More than 95 per cent of the prices thus ascertained corresponded with the mill base prices existing when the transactions were had. Of the remaining 5 per cent, there were some transactions which apparently were based on a mill price or a bag price existing just before or shortly after the transaction; and a number of variations occurred in the latter part of 1920 and the first three months of 1921. (Vol I, pp. 250–251.) During that time not only was an investigation being made by the Government, but the Lockwood Committee had the cement industry, along with many other industries, under investigation. (Minutes, November 18, 1920; vol. I, p. 614.)

XII

DEFENSES

Defendants' brief was received too late to permit of an extended reply thereto; but it is believed that the facts heretofore detailed constitute a complete refutation of every proposition relied upon in defense. Mr. Morron was the only representative of the defendant corporations who testified. Evidence of the following character was offered on behalf of the defendants: (1) A vast amount of correspondence was read, most of which was between officers and agents of the several defendant corporations, the object being to show that each company was actively prosecuting its business. As heretofore stated, it is not insisted that there was no competition in selling cement. Each company undoubtedly was making an earnest effort to push its business; *but there was no competition so far as prices and important trade practices were concerned; and, therefore, as all cement is of the same quality, the public was deprived of all competition that was materially valuable.* (2) The Government introduced a number of tables prepared by its accountant, James W. Allen, which showed the relative production and shipments of cement by the several defendants; and numerous charts prepared by defendants based upon those tables were introduced to show that the relationship between the

quantities produced and shipped by the several defendants had not been constant. This is immaterial because, as above stated, it is not claimed that defendants were not active in selling cement. However, it is a rather significant circumstance that the production and shipments of the three large companies, Atlas, Alpha, and Lehigh, were constantly in the neighborhood of 50 per cent. of the entire amount reported to the Association. (3) A number of expert witnesses of high standing were examined to prove that uniformity of price of a commodity is no evidence whatever of a combination or agreement between those engaged in producing the commodity, and that the price of cement would necessarily be uniform in the absence of all agreements and combinations upon the part of the manufacturers. Probably the most distinguished economist examined upon this subject was Dr. Thomas Sewall Adams, Professor of Economy at Yale University. The character of his testimony appears from the following colloquy between him and the court:

> The COURT. Do you mean to say that you think from an economic standpoint no fair inference can be drawn either way from the mere fact of uniformity in prices?
>
> The WITNESS. From the mere prices, your Honor, I do not think any inference can be drawn. You can go back into the circumstances of the industry to determine it.
>
> Q. Let us see about that, doctor. Suppose you know of a number of manufacturers in

a certain industry whose cost of production is different, substantially different, and who have the capacity to overproduce. If they were all running to full capacity there would be a very considerable overproduction, and suppose there is absolute uniformity running for some years through their prices, uniformity in every respect, do you mean to say that does not mean anything at all?

A. I think you forget in your inference the fact that the increasing production in many lines usually means higher costs. That is not an absolutely uniform but a very frequent fact. I should say it is very often the fact. For a given period of time if you increase your production you may be able to reduce your costs, but the point is reached where if you push your production past a certain point, you increase them.

Q. Take a number of manufacturers in the same industry, manufacturing 90 per cent or more of that particular product, their cost of production is very substantially different.

A. All of them together manufacturing 90 per cent?

Q. That is what I mean. They have a capacity to produce a great deal more.

A. At what cost, sir?

Q. I don't care anything about the cost now.

A. All right.

Q. I say the difference in cost of production by these factories is substantial, and they

have the capacity to produce a great deal more than is consumed, and yet suppose their quotations or prices and the prices at which they will sell their products, are exactly the same extending over some years, that their rate of discount is exactly the same, that the price on returned bags is exactly the same, everything is uniform, do you mean to say that does not mean anything?

A. I think it may mean anything. It may mean the most perfect competition. As I see the situation, competition is a game, a race, and races frequently result in dead heats, and the competition is active when they are doing that.

Q. What kind of competition?

A. Competition to get ahead of your competitors.

(Vol. I, pp. 305–306.)

Undoubtedly the price of cement would approach uniformity in a normal market in the absence of all combinations between the manufacturers, but to say that uniformity under the circumstances described by the court means nothing can hardly be accepted by any one not an economist. While economic laws tend to produce uniformity of price under normal circumstances, yet the price thus established is entirely different from a uniform price established by an agreement or through a combination. The one will be controlled entirely by the law of supply and demand; and when the demand does not exceed the supply the price will be

in the neighborhood of the cost of production to those producing most cheaply, plus a reasonable profit. But the price resulting from agreement or combination is entirely artificial. If determined by agreement, it is, of course, the price specified. But if it results from a combination of the character here shown, it is established by human motives and impulses entirely different from those which prompt the actions of genuine competitors. Under such circumstances each member either refuses to cut under the prices of his fellow members, to whom he is constantly reporting, or, through a spirit of rivalry, endeavors to get a higher price. Consequently, if Dr. Adams' theory that uniformity is no evidence of a combination be true, the testimony is of no value in this case; because the existence of the combination and its nature and activities are fully proven without any contradiction; and it necessarily results that the prices charged by defendants and the uniformity of prices and of trade practices proven were the results of this combination.

DISCUSSION OF THE LAW.

Before reviewing the few authorities which have a direct bearing upon the facts of this case, it is well to succinctly restate the scope of and the elements that compose the combination between the defendants.

The ultimate object of the organization was to control the price of cement. This was to be accomplished in two ways: (1) By the control of the supply of cement on the market, and (2) by intimate association, exchange of information, and a ready means of computing a common delivered price at any point. The agencies through which free cement was to be kept from the market were, (1) specific job contracts, (2) checkers and (3) cancellation of all but one contract for the same job and of all excess cement called for in any one contract. The record does not disclose that the use of the specific job contract was formally agreed upon by all the companies; but it does show that it was in existence when the Association was organized and has continued to be used by all of them ever since, and that this part of the scheme is built around this form of contract.

These specific job contracts are most ingeniously drawn. Those made with the user of cement, obligate him to take all the cement used in the job. If he were to make a dozen contracts for the same job,

they would all be good *as to him;* but they are so worded that the seller is not bound to deliver any cement that is not actually used in the job described. Likewise, all contracts made with a dealer are valid *as to him* provided that dealer furnishes the cement for the job described, but are not binding on any seller other than the one whose cement is actually used. But, if a contractor does not take from a dealer the cement he uses in the job, the contract is not binding on either the seller or the dealer. So the only contracts which the manufacturers have any legitimate excuse for cancelling are those made with dealers through whom the cement used is not purchased. All other contracts are enforcible by the manufacturers. *But they are so worded that the manufacturers do not have to deliver any cement under them except that actually used.* The breach of the contract consists in not using the cement contracted for on the job; and therefore the seller is not bound to offer the cement when the buyer has made it impossible to use it according to contract. *However, it is clearly recognized in the contract that the seller may deliver, at his option, cement not used on the job described. It says,* "The seller *is not obligated to furnish* " more than the quantity of cement actually used in the work. Then it is unquestioned that the defendant manufacturers have entered into this combination: They agreed among themselves that they would not deliver any cement under specific job contracts other than that actually used in the

jobs described, and would thereby withhold from the general trade all cement that would otherwise reach it through those contracts. And to enforce this agreement they have further conspired and agreed that they would, through the Association, exchange a full description of every specific job contract to enable them to check up each job and ascertain whether more than one contract existed therefor, and that they would also employ checkers to examine every job that might be questioned to ascertain whether more cement had been contracted for than was necessary for use in said job; and the combination has been carried out with a thoroughness that at times could well be called ruthlessness.

This record shows that hardly a sack of cement has passed through the net thus set; and where it was suspected that a bag was loose, it was hunted with as much perseverance as smuggled goods are hunted by a revenue officer. By this combination defendants have continually kept from the market a quantity of cement which they well knew, and by their conduct recognized, would be sufficient to materially affect the prices. If this were the sole question in this litigation, can there be a doubt under the authorities that such a combination and conspiracy is within the prohibition of the Anti-Trust Act? But this is but a part of the combination. They have agreed to, and do, exchange complete information with reference to each individual's production of clinker, and production and shipments

of cement, to enable them to curtail production if it be thought advisable; also to, and they do, include in their reports of sales the exact prices at which every sale for a specific job is made, knowing that there is a uniform differential between the price to dealers and to consumers; also to, and they do, distribute freight rate books showing the estimated freight rate from *agreed basing points* to every station in the territory covered by the Association, so that by a glance at these books each member can tell the exact price which every other member will bid for the sale of cement to be delivered at any one of those points. They also have agreed to, and do, hold meetings at which they discuss all important trade practices in the industry, and at times reach an agreement as to some of them. The result of this combination has been practical uniformity in the price of cement and in the terms of its sale throughout the entire section in which defendants operate; and *competition as to prices and terms in such territory has been eliminated.* It is not contended that all competition of every character has been suppressed, but that it has been reduced to competition in service and in the personality of the salesmen. Is such a gigantic combination and conspiracy which completely dominates a great industry in the most populous and wealthy section of the United States violative of the Anti-Trust Act?

The Government relies in this case upon the same authorities as those relied upon in cause No. 342,

known as the *Maple Flooring Case;* but to avoid reference to the brief filed by the Government therein the review of the authorities in that case will be reprinted here with such changes in wording as are necessary to make it applicable to the facts of this case.

It is believed that no principles of law can be better settled than are those which control the questions involved in this case; and that to refuse to apply them to the facts proven in this record would be in effect to overrule the previous decisions of this court, and to license trade associations to engage in every practice which they may pretend is adopted as a reasonable regulation to promote the general welfare of business, regardless of how it may effect production and prices, and how oppressive it may be upon the public. The cases which have a direct bearing upon the activities of associations are comparatively few in number, and will now be given consideration.

Eastern States Retail Lumber Dealers' Association v. *United States*, 234 U. S. 600, may be considered as the leading case in applying the Anti-trust Act to practices of trade associations. The association attacked was composed of retail lumber dealers; and the practice passed upon by the court was that of distributing among the members a list of manufacturers who dealt directly with consumers. The following was the form of the report distributed:

(Name of the particular association circulating it.) Statement to members (with the date)

You are reminded that it is because you are members of our Association and have an interest in common with your fellow members in the information contained in this statement, that they communicate it to you; and that they communicate it to you in strictest confidence and with the understanding that you are to receive it and treat it in the same way.

The following are reported as having solicited, quoted or as having sold direct to the consumers:

(Here follows a list of the names and addresses of various wholesale dealers)

Members upon learning of any instance of persons soliciting, quoting, or selling direct to consumers, should at once report same, and in so doing should, if possible, supply the following information:

The number and initials of car.

The name of consumer to whom the car is consigned.

The initials or name of shipper.

The date of arrival of car.

The place of delivery.

The point of origin.

The facts relative to the preparation and distribution of this list and the inferences to be drawn therefrom are thus stated by the court:

> The record discloses a systematic circulation among the members of the defendant associations of the official report above quoted. The method of operation as stated by the learned counsel for the appellants is thus summarized in his brief:
>
> "The names on this list are obtained and placed thereon as the result of complaints made by individual retailers. When an individual member of a retail association learns of a sale by a wholesaler to one of the customers of the retailer he may complain in writing to the secretary of his association, whose duty it is thereupon to ascertain the facts by correspondence with the wholesaler in question and such other means as may seem proper. Should the report or complaint be without proper foundation or should the secretary become satisfied that the matter is a trifling one or the result of inadvertence, the incident usually terminates at this point; but should the complaint appear to be serious and well founded the case is submitted to the board of directors of the retail association at its next meeting and should the board be satisfied that the wholesaler is generally making a practice of selling to consumers or customers of the retail trade, the secretary is directed to report the name of such wholesaler for the official list. Thereupon the secretary sends

the name to Mr. Crary, of New York, who adds it upon the next report to the names of those already thereupon. Each report contains the names of all wholesalers who have been reported from the very beginning as selling to consumers and whose names have not been removed for cause. The reports or lists after being printed in New York are distributed amongst the secretaries of the defendant associations; those for each association being marked with its name and in that way only being distinguished from those sent to the other associations. The secretary of each association then distributes the lists to his members. Should any wholesaler desire to have his name removed from the list he can have it done upon satisfactory assurance to the local secretary that he is no longer selling in competition with the retailers. In practice the greatest care is taken to make the list accurate, and as a matter of fact, it only contains the names of such wholesalers as are absolutely committed to the practice of competing with retailers for the custom of builders and contractors."

The reading of the official report shows that it is intended to give confidential information to the members of the associations of the names of wholesalers reported as soliciting or selling directly to consumers, members upon learning of any such instances being called upon to promptly report the same, supplying detailed information as to the particulars of the transaction. When

viewed in the light of the history of these associations and the conflict in which they were engaged to keep the retail trade to themselves and to prevent wholesalers from interfering with what they regarded as their rights in such trade there can be but one purpose in giving the information in this form to the members of the retail associations of the names of all wholesalers who by their attempt to invade the exclusive territory of the retailers, as they regard it, have been guilty of unfair competitive trade. These lists were quite commonly spoken of as blacklists, and when the attention of a retailer was brought to the name of a wholesaler who had acted in this wise it was with the evident purpose that he should know of such conduct and act accordingly. True it is that there is no agreement among the retailers to refrain from dealing with listed wholesalers, nor is there any penalty annexed for the failure so to do, but he is blind indeed who does not see the purpose in the predetermined and periodical circulation of this report to put the ban upon wholesale dealers whose names appear in the list of unfair dealers trying by methods obnoxious to the retail dealers to supply the trade which they regard as their own. Indeed this purpose is practically conceded in the brief of the learned counsel for the appellants:

"It was and is conceded by defendants and the Court below found that the circulation of this information would have a natural tendency to cause retailers receiving

these reports to withhold patronage from listed concerns. That was of course the very object of the defendants in circulating them."

In other words, the circulation of such information among the hundreds of retailers as to the alleged delinquency of a wholesaler with one of their number had and was intended to have the natural effect of causing such retailers to withhold their patronage from the concern listed. (234 U. S. 607–609.)

In reply to the contention that no agreement between the defendants was proven, the Court said:

But it is said that in order to show a combination or conspiracy within the Sherman Act some agreement must be shown under which the concerted action is taken. It is elementary, however, that conspiracies are seldom capable of proof by direct testimony and may be inferred from the things actually done, and when in this case by concerted action the names of wholesalers who were reported as having made sales to consumers were periodically reported to the other members of the associations, the conspiracy to accomplish that which was the natural consequence of such action may be readily inferred. (p. 612).

The pressure thus brought to bear upon the manufacturer, which induced him to trade through retailers and not directly to the public was not the only restraint deemed material by the court.

With reference to the moral effect upon the retailers themselves who received the lists the court said:

> The circulation of these reports not only tends to directly restrain the freedom of commerce by preventing the listed dealers from entering into competition with retailers, as was held by the District Court, *but it directly tends to prevent other retailers who have no personal grievance against him and with whom he might trade from so doing, they being deterred solely because of the influence of the report circulated among the members of the associations.* In other words, the trade of the wholesaler with strangers was directly affected, not because of any supposed wrong which he had done to them, but because of the grievance of a member of one of the associations, who had reported a wrong to himself, which grievance when brought to the attention of others it was hoped would deter them from dealing with the offending party. This practice takes the case out of those normal and usual agreements in aid of trade and commerce which may be found not to be within the act and puts it within the prohibited class of undue and unreasonable restraints, such as was the particular subject of condemnation in *Loewe* v. *Lawlor, supra.* (pp. 612–613).

In answer to the contention that what was done was for the protection of the retail trade, the court said:

> The argument that the course pursued is necessary to the protection of the retail trade

> and promotive of the public welfare in providing retail facilities is answered by the fact that Congress, with the right to control the field of interstate commerce, has so legislated as to prevent resort to practices which unduly restrain competition or unduly obstruct the free flow of such commerce, and private choice of means must yield to the national authority thus exerted. *Addyston Pipe Co.* v. *United States,* 175 U. S. 211, 241, 242 (p. 613).

The court concluded its opinion thus:

> When the retailer goes beyond his personal right, and, conspiring and combining with others of like purpose, seeks to obstruct the free course of interstate trade and commerce and to unduly suppress competition by placing obnoxious wholesale dealers under the coercive influence of a condemnatory report circulated among others, actual or possible customers of the offenders, he exceeds his lawful rights, and such action brings him and those acting with him within the condemnation of the act of Congress, and the District Court was right in so holding (p. 614).

The principles there decided are directly applicable to and in fact control this case, but the practice there condemned was simple and innocuous in comparison with the scheme adopted and enforced by defendants. There the immediate purpose not was the control or increase of prices, though prices were no doubt incidentally affected by the practice. It was not claimed that the gen-

eral volume of business was reduced. The restraint consisted in diverting the trade from the path which it otherwise would have taken; or rather in forcing it to remain in its usual path. While the distribution of the list was made pursuant to an understanding between the members of the association, yet there was no agreement between them that they would give any consideration to the lists. The restraint resulted entirely from the moral effect the information distributed had upon the members. If one was " blind indeed who does not see the purpose in the predetermined and periodical circulation of this report " as said by the court in that case, he is unquestionably blind if he fails to see the purpose of the complicated scheme devised by the defendants in this case and the thoroughness with which it has been enforced.

American Column & Lumber Co. v. *United States,* 257 U. S. 377, was the first case in which an association was attacked because it engaged in what is known as " Open Price Competition." The opinion may be divided into four parts, to wit:

(1) A statement of the plan;
(2) The manner of its enforcement;
(3) The results of its operation; and
(4) Application of the law.

Beyond question what the court condemned was *the plan;* and the evidence showing the manner in which it was enforced and the results therefrom was cited and discussed only to show the purpose intended to be accomplished by the association and what was actually accomplished. In interpreting this decision, counsel for many associations, as was done by counsel for the defendant association,

have made the mistake of assuming that the case is not an authority unless the identical acts be committed in enforcing the association's plan that were shown to have been committed by the association attacked in that case; when in fact the precise character of the acts are unimportant, if the plan itself is of such nature that if enforced interstate commerce will be restrained thereby, and if the proof shows that the plan has been adopted and put in operation by the members of the association. An analysis of the opinion will show, not only that no element deemed essential in that case is wanting here, but that there are elements which did not there exist but are present here, that are specially vicious, and are within themselves violative of the Antitrust Act.

In beginning the discussion the court said:

> The activities which we shall see were comprehended within the "Open Competition Plan," (which is sometimes called "The New Competition,") have come to be widely adopted in our country, and, as this is the first time their legality has been before this court for decision, some detail of statement with respect to them is necessary (p. 392).

The court then quotes at some length from the report of the committee which evolved the plan. In that report the committee discussed the objects of the plan and the benefits expected to be derived therefrom; *and as defendants in this case are operating the same open price plan that was there at-*

tacked and condemned, that report is as pertinent here as if made by a committee of the defendant association. With reference to that report and a subsequent explanation of the objects and purposes of the plan, the court in part said:

> After stating that the purpose was not to restrict competition or to control prices but to "furnish information to enable each member to intelligently make prices and to intelligently govern his production," the committee continues:
>
> "The chief concern of the buyer, as we all know, is to see that the price he pays is no higher than that of his competitors, against whom he must sell his product in the market. The chief concern of the seller is to get as much as anybody else for his lumber; in other words to get what is termed the top of the market for the quality he offers. By making prices known to each other they will gradually tend toward a standard *in harmony with market conditions*, a situation advantageous to both buyer and seller."
>
> Not long after the consolidation a further explanation of the objects and purposes of the "Plan" was made in an appeal to members to join it, in which it is said:
>
> "The theoretical proposition at the basis of the Open Competition plan is that,
>
> "*Knowledge regarding prices actually made is all that is necessary to keep prices at reasonably stable and normal levels.*

> "The Open Competition plan is a central clearing house for information on prices, trade statistics, and practices. By keeping all members fully and quickly informed of what the others have done, the work of the plan results in *a certain uniformity of trade practice.* There is no agreement to follow the practice of others, *although members do naturally follow their most intelligent competitors,* if they know what these competitors have been actually doing.
>
> "The monthly meetings held in various sections of the country each month have improved the *human relations* existing between the members before the organization of this plan." (Italics the court's p. 392.)

After quoting at length from a subsequent communication sent to the members in which the advantages of the plan were recited, the court then stated in detail the system of reporting, first by members to the association, and second by the association to the members; and without quoting, or giving a summary of the court's language it is sufficient to say that the system of reports there described and the system used by defendants in this case are in every material feature precisely the same. After a description of the reporting system the court said:

> This extensive interchange of reports, supplemented as it was by monthly meetings at which an opportunity was afforded for

> discussion " of all subjects of interest to the members," very certainly constituted an organization through which agreements, actual or implied, could readily be arrived at and maintained, if the members desired to make them (p. 397).

The court then said that in practice three important additions were made to the plan:

First: Instead of the monthly meetings provided for, the territory in which the association was operating was divided into four districts and forty-nine meetings were held. However the proof showed that the division was for the convenience of the members; and the members really attended a meeting but once a month.

Second: Before each meeting a questionnaire was sent out asking for reports on production for the preceding month and estimated production for the next two months, and whether it was expected that the mill would be shut down, and if so for how long; and also for the members' views as to market conditions. From the information thus received the statistician compiled a report which was distributed among the members attending the meeting.

Third: While the plan provided for a monthly market letter, Gadd, the manager of statistics, actually sent out letters of that nature with the weekly sales reports. It is unnecessary to again repeat the many features in this case that were not

present in that one, some of which are entirely outside the Association's constitution and by-laws.

After stating in detail the plan as adopted with the features added in practice the court said:

> Obviously the organization of the defendants constitutes a combination and confessedly they are engaged in a large way in the transportation and sale of lumber in interstate commerce so that there remains for decision only the question whether the system of doing business adopted resulted in that direct and undue restraint of interstate commerce which is condemned by this Antitrust statute.
>
> It has been repeatedly held by this court that the purpose of the statute is to maintain free competition in interstate commerce and that any concerted action by any combination of men or corporations to cause, or which in fact does cause, direct and undue restraint of competition in such commerce falls within the condemnation of the act and is unlawful (pp. 399–400).

The court then, after quoting from a number of authorities in which the Antitrust Act had been construed, quotes at length from communications sent by Gadd to the members, and also from letters written by members to Gadd in response to a circular letter sent out by him asking for an expression of opinion as to benefits received from the

operation of the plan. And these quotations are followed with the remark:

> These quotations are sufficient to show beyond discussion that the purpose of the organization and especially of the frequent meetings was to bring about a concerted effort to raise prices regardless of cost or merit, and so was unlawful, and that the members were soon entirely satisfied that the "Plan" was "carrying out the purpose for which it was intended" (p. 409).

Therefore the comments of Gadd and the statements of the members as to benefits derived from the plan was deemed important *because they showed the purpose of the organization.* And there is no justification whatever for the assumption that the identical evidence then introduced must appear in this record before that case can be considered a controlling authority in this one. As above shown the members of the defendant association met and discussed face to face every question relating to the industry; and no comments upon the part of a manager or secretary are necessary or would be even helpful. There is no probability that the Government will ever be able to introduce in another case the same evidence with reference to the results accomplished by the association, because no other manager will ever write the members asking testimonials as to its benefits. But to the same effect were the remarks of Mr. Lober when chosen

President at the meeting of January 15, 1917, to wit:

> I feel that we have gone a long way in the last year. We have done a great deal. I only hope we can progress as much during 1917. (Vol. I, p. 522.)

And also the remarks of Mr. Ward, when assuming the office of President two years later, to wit:

> I further want to say that I think we have brought this work up to *where it is about one of the best of its kind in existence. Any organization that can produce the results that this one has, at an annual expenditure of $50,000, I think, is going some.* (Vol. I, p. 585.)

After a thorough review of the facts and the law the court said:

> To call the activities of the defendants, as they are proved in this record, an "Open Competition Plan" of action is plainly a misleading misnomer.
>
> Genuine competitors do not make daily, weekly, and monthly reports of the minutest details of their business to their rivals, as the defendants did; they do not contract, as was done here, to submit their books to the discretionary audit and their stocks to the discretionary inspection of their rivals for the purpose of successfully competing with them; and they do not submit the details of their business to the analysis of an expert, jointly employed, and obtain from him a

"harmonized" estimate of the market as it is and as, in his specially and confidentially informed judgment, it promises to be. This is not the conduct of competitors but is so clearly that of men united in an agreement, express or implied, to act together and pursue a common purpose under a common guide that, if it did not stand confessed a combination to restrict production and increase prices in interstate commerce and as, therefore, a direct restraint upon that commerce, as we have seen that it is, that conclusion must inevitably have been inferred from the facts which were proved. *To pronounce such abnormal conduct on the part of 365 natural competitors, controlling one-third of the trade of the country in an article of prime necessity, a "new form of competition" and not an old form of combination in restraint of trade, as it so plainly is, would be for this court to confess itself blinded by words and forms to realities which men in general very plainly see and understand and condemn, as an old evil in a new dress and with a new name.*

The "Plan" is, essentially, simply an expansion of the gentlemen's agreement of former days, skillfully devised to evade the law. To call it open competition because the meetings were nominally open to the public, or because some voluminous reports were transmitted to the Department of Justice, or because no specific agreement to restrict trade or fix prices is proved, can not conceal the fact that the fundamental pur-

pose of the "Plan" was to procure "harmonious" individual action among a large number of naturally competing dealers with respect to the volume of production and prices, without having any specific agreement with respect to them, and to rely for maintenance of concerted action in both respects, not upon fines and forfeitures as in earlier days, *but upon what experience has shown to be the more potent and dependable restraints, of business honor and social penalties—cautiously reinforced by many and elaborate reports, which would promptly expose to his associates any disposition in any member to deviate from the tacit understanding that all were to act together under the subtle direction of a single interpreter of their common purposes,* as evidenced in the minute reports of what they had done and in their expressed purposes as to what they intended to do (pp. 410–411).

United States v. *American Linseed Oil Company*, 262 U. S. 371, involved the validity of an organization which functioned through a bureau. The manufacturers of linseed oil made separate but identical contracts with the bureau whereby they obligated themselves to furnish reports of their sales and prices to the bureau; and the bureau was to report the information to the other members. Monthly meetings were also provided for. The plan was operated through Mr. Armstrong, who called himself a bureau, instead of through an association conducted by a secretary as in the present case, or a manager as in the Hardwood case.

Naturally there is a variation in the plan as applied to different industries. The production of linseed oil is seasonal; and it is sold generally for future delivery months in advance. For the plan to work successfully in connection with that industry it was felt necessary that change of prices should be promptly reported. Every member was at perfect liberty, so the defendants all claimed, to change its price at any time and to any extent it might see fit; but if it offered oil to a prospective purchaser for less than its list price it immediately wired its offer to the bureau, which relayed it to the members. When it was suspected that a member had made a sale for less than its list price other members had the right to make inquiry of such member about the matter through the bureau. The evidence showed that the system as outlined in the contract was pretty rigidly enforced. The court after stating at length the provisions of the contracts and the manner in which they had been enforced said:

> The Sherman Act was intended to secure equality of opportunity and to protect the public against evils commonly incident to monopolies *and those abnormal contracts and combinations which tend directly to suppress the conflict for advantage called competition—the play of the contending forces ordinarily engendered by an honest desire for gain.* " The statute did not forbid or restrain the power to make normal and useful contracts to further trade by resorting to all

normal methods, whether by agreement or otherwise, to accomplish such purpose. * * * The words restraint of trade should be given a meaning which would not destroy the individual right to contract and render difficult if not impossible any movement of trade in the channels of interstate commerce—the free movement of which it was the purpose of the statute to protect." *United States* v. *American Tobacco Co.*, 221 U. S. 106, 179, 180; *Ramsay Co.* v. *Associated Bill Posters*, 260 U. S. 501; *Federal Trade Commission* v. *Sinclair Refining Co.*, 261 U. S. 463.

Certain it is that the defendants are associated in a new form of combination and are resorting to methods which are not normal. If, looking at the entire contract by which they are bound together, in the light of what has been done under it the Court can see that its necessary tendency is to suppress competition in trade between the States, the combination must be declared unlawful. That such is its tendency, we think, must be affirmed. To decide otherwise would be wholly inconsistent with the conclusion reached in American Column & Lumber Co. v. *United States, supra* (pp. 388–389).

And the court thus concluded its opinion:

We are not called upon to say just when or how far competitors may reveal to each other the details of their affairs. In the absence of a purpose to monopolize *or the compulsion that results from contract or*

> *agreement*, the individual certainly may exercise great freedom; *but concerted action through combination presents a wholly different problem and is forbidden when the necessary tendency is to destroy the kind of competition to which the public has long looked for protection.* The situation here questioned is wholly unlike an exchange where dealers assemble and buy and sell openly; and the ordinary practice of reporting statistics to collectors stops far short of the practice which defendants adopted. Their manifest purpose was to defeat the Sherman Act without subjecting themselves to its penalties.
>
> The challenged plan is unlawful and an injunction should go against it as prayed by the original bill (p. 390).

In fact, as pointed out by the court in the Hardwood and Linseed Oil Cases, combinations in the form of associations engaging in practices of the nature heretofore described fall squarely within the prohibitions of the Antitrust Act as construed in many former cases.

While as said in *United States* v. *American Tobacco Co.*, 221 U. S. 179, in referring to the previous decision in the Standard Oil case, "the statute did not forbid nor restrain the power to make *normal and usual contracts* to further trade by resorting to all *normal* methods, whether by agreement or otherwise to accomplish such purpose," yet as declared in the same case (p. 181), "in view of the general language of the statute and the public

policy which it manifested, *there was no possibility of frustrating that policy by resorting to any disguise or subterfuge of form, since resort to reason rendered it impossible to escape by any indirection the prohibitions of the statute.*"

The closing remarks of Circuit Judge (subsequently Mr. Justice) Lurton in the great opinion delivered in *John D. Park & Sons Co.* v. *Hartman*, 153 Fed. 24, 46, is specially applicable in this case:

> *It has been suggested that we should have regard to new commercial conditions and a tendency toward a relaxation of old common-law principles which tend to prevent development on modern lines. This is an argument better addressed to legislative bodies than to the courts. Neither is it wise for the courts to countenance the introduction of artificial distinctions dependent upon the variant economic views of individual judges. Distinctions which are specious or analogies which are but apparent will but afford opportunities to whittle away broad economic principles lying at the bottom of our public policy, principles which have long received the sanction of statesmen and the approving recognition of a long line of jurists. A like argument is expected whenever some new method of circumventing freedom of commerce comes under the tests of the law. It was made and answered by Judge Taft in the Addyston Pipe Case with a strength to which we can add nothing.*

33562—25——16

The Relief to which the Government is Entitled

The decree entered in the court below is the only one that can properly be made in this case.

The situation here presented is quite different from the conditions existing when the acquisition of various properties by a corporation, or the merger of a number of corporations into one, have been held to constitute a monopoly or an unlawful combination in violation of the Anti-Trust Act. There the rights of property are involved, and the court will not destroy the property, but direct that it be restored to the original owners, or be so divided that a further violation of the statute will not exist. But here no property rights are involved. There exists nothing but an agreement or combination which the defendants have entered into and in which they are engaging; and the status quo is restored and the restraints upon commerce are stopped by a simple decree declaring the agreement and combination unlawful, and inhibiting the defendants from further engaging therein, or in any combination of like character.

An unlawful conspiracy may be composed of elements each of which when considered alone is lawful. As said in *Swift* v. *United States,* 196 U. S. 375, 396:

> The scheme *as a whole* seems to us to be within reach of the law. The constituent elements, as we have stated them, are enough

> to give to the scheme a body and, for all that we can say, to accomplish it. Moreover, whatever we may think of them separately, when we take them up as distinct charges they are alleged sufficiently as elements of the scheme. *It is suggested that the several acts charged are lawful and that intent can make no difference. But they are bound together as the parts of a single plan. The plan may make the parts unlawful.*

To hold that the defendants should be enjoined only from doing those things which are within themselves unlawful would lead to the absurd result that where each element of a conspiracy is, when standing alone, lawful; no injunctive decree can be entered, although the conspiracy composed of these several elements may be unlawful and accomplish the most harmful results.

This question was conclusively settled in *American Column & Lumber Co.* v. *United States, supra. There the court entered a sweeping decree declaring the association an unlawful combination and inhibiting the defendants from engaging in any of the activities provided for by its organization.* On the hearing defendants' counsel earnestly insisted that the decree was too broad and that the court should specify certain things which the association could legitimately do. *The court disregarded this insistence and affirmed the decree of the court below in toto. A petition for a rehearing*

was filed, in which it was again urged upon the court that a limitation should be placed upon the decree and that the defendants should not be enjoined from separately doing a number of things prescribed by the association, but the petition was dismissed by the court.

In fact the question had been settled in the case of *Swift* v. *United States*, 196 U. S. 375, 401–2. A broad decree inhibiting the defendants from engaging in any of the things alleged in the bill had been entered by the court below, and it was insisted that the decree should be modified in certain particulars. The only modification directed by the court was that in one or two particulars it should be made more specific. But the court especially considered the allegations in the bill (the case had been disposed of on demurrer) wherein it was alleged that defendants had engaged in and would continue arrangements with the railroads whereby the defendants received, by means of rebates and other devices, rates less than the lawful rates for transportation, and were exclusively to enjoy and share this unlawful advantage to the exclusion of competition and the public (p. 392). The court stated that the acts here charged, apart from the combination and the intent, might perhaps not necessarily be unlawful except for the adjective which proclaimed them so, and the court assumed for the purpose of the decision that they were not unlawful, and that the defendants severally might lawfully obtain less

than the regular rates for transportation if the circumstances were not substantially similar to those for which the regular rates were fixed; but the Court said:

> Whether this particular combination can be enjoined, as it is, apart from its connection with the other elements, if entered into with the intent to monopolize, as alleged, is a more delicate question. The question is how it would stand if the tenth section were the whole bill. Not every act that may be done with intent to produce an unlawful result is unlawful, or constitutes an attempt. It is a question of proximity and degree. The distinction between mere preparation and attempt is well known in the criminal law. *Commonwealth* v. *Peaslee,* 177 Massachusetts, 267, 272. The same distinction is recognized in cases like the present. *United States* v. *E. C. Knight Co.,* 156 U. S. 1, 13; *Kidd* v. *Pearson,* 128 U. S. 1, 23, 24. We are of opinion, however, that such a combination is within the meaning of the statute. It is obvious that no more powerful instrument of monopoly could be used than an advantage in the cost of transportation. And even if the advantage is one which the act of 1887 permits, which is denied, perhaps inadequately, by the adjective " unlawful," still a combination to use it for the purpose prohibited by the act of 1890 justifies the adjective and takes the permission away. (196 U. S. 401, 402.)

For the foregoing reasons it is respectfully submitted that the decree of the court below should be in all respects affirmed.

JAMES M. BECK,
Solicitor General.

J. A. FOWLER,
ROGER SHALE,
Special Assistants to the Attorney General.

MARCH, 1925.

○

CEMENT MANUFACTURERS PROTECTIVE ASSOCIATION ET AL. *v.* UNITED STATES.

APPEAL FROM THE DISTRICT COURT OF THE UNITED STATES FOR THE SOUTHERN DISTRICT OF NEW YORK.

No. 551. Argued March 3, 5, 1925.—Decided June 1, 1925.

1. Dissemination of information enabling sellers of goods under contracts for future delivery individually to prevent purchasers from fraudulently procuring deliveries on the pretense that the sellers are obligated by their contracts to make them, is not an unlawful restraint of trade, even though the information be gathered by and disseminated among the sellers themselves through coöperation. P. 603.
2. Coöperation of manufacturers in gathering and exchanging (1) information concerning production of cement and the prices for which it was sold by them in actual, closed "specific job" contracts constituting but a part of their business, and (2) information of transportation costs from chief points of production, *held* not an unlawful restraint on commerce, even assuming that the result may tend to bring about uniformity of price, through the operation of economic law. P. 604.
3. In this case the Government did not rely upon any agreement or understanding for price maintenance; and the record fails to establish, either directly of by inference, any concerted action other than that involved in the gathering and dissemination of information, respecting sale and distribution, which in itself the Court finds not unlawful; nor does the evidence show any effect on price and production except such as would naturally flow from the dissemination of such information in the trade and its natural influence on individual action. P. 606.
4. In a suit under the Anti-Trust Act to dissolve a trade association formed by numerous manufacturers of Portland cement, it appeared: (1) That, following trade practice, each manufacturer disposed of part of its product through "specific job contracts", i. e., contracts in effect obligating the manufacturer to deliver in the future to the purchaser at a maximum price named, payable on delivery, the cement required to complete a specified piece of construction work, but allowing the purchaser the advantage of any decline, before delivery, in market price, and not obligating him in any event to take the cement contracted for; (2) that to pre-

vent contractors from obtaining more cement than they were entitled to under such contracts by the practice of entering into several such contracts with several manufacturers for the same specific job, the details of such contracts were reported by the members to the association, agents of the latter visited the jobs, and the fullest information respecting the contracts and the use of cement shipped under them was reported to the members by the secretary; and there were many cancellations of deliveries under such contracts on the ground that purchasers were not entitled to delivery by the terms of their agreements; (3) that the association compiled and distributed to its members books listing freight rates from established basing points to many cities and towns, enabling the manufacturer to calculate a delivery price on the basis of its own mill price (determined by itself) to places nearest in point of freight rate to its own mill, and also to determine at once the freight differential it must offset in its mill price in order to compete with other manufacturers serving any other given territory; (4) that members of the association rendered monthly detailed reports concerning delinquent accounts of their customers; (5) and reports of production, shipments and stock on hand, which, being compiled and distributed, informed each member fully of the available supply of cement and by whom it was held; (6) that, by universal practice of the trade, the price of bags in which cement was shipped was included in the mill base price; and that quarterly reports were made to the association showing the total number of bags returned to each member by customers during the preceding quarter and the percentage found unfit for use; but no information was reported concerning the charge and allowance for bags returned, the number received from any particular customer, or the portion found unfit for use; (7) that periodical meetings were held at which minor subjects, such as return of bags, bag reports, and trade acceptances, were discussed, but not current or future prices, or production or market conditions; which meetings were not proved to have resulted in any agreement or in any uniformity of trade practice. *Held* that a purpose to control production and price of cement could not be inferred from such activities, and they were not in themselves unlawful restraints of commerce prohibited by the Anti-Trust Act. P. 592.

Reversed.

APPEAL from a decree of the District Court in a suit brought by the Government under the Anti-Trust Act,

enjoining the continuance of a combination of various cement manufacturers, in the form of a trade association.

Mr. John W. Davis, with whom *Messrs. George T. Buckingham* and *Archibald Cox* were on the brief, for appellants.

Mr. J. A. Fowler, Special Assistant to the Attorney General, with whom the *Solicitor General* and *Mr. Roger Shale,* Special Assistant to the Attorney General, were on the brief, for the United States.

MR. JUSTICE STONE delivered the opinion of the Court.

This is an appeal from a final decree of the District Court for the Southern District of New York granting a perpetual injunction in a proceeding brought by the United States under § 4, Chapter 647, of the Act of July 2, 1920, 26 Stat. 209, commonly known as the Sherman Act. Defendants are the Cement Manufacturers Protective Association, an unincorporated association, four individuals, the officers of the Association, and nineteen corporations, members of the Association, engaged in manufacturing and shipping Portland cement in interstate commerce, in Pennsylvania, New Jersey, New York, Maryland and Virginia. The petition, which was filed on the 30th day of June, 1921, alleges restraint of interstate commerce in violation of § 1 of the Act. The complaint prays that the Cement Manufacturers Protective Association be adjudged a violation of § 1 and enjoined accordingly. After final hearing, the District Court entered its decree enjoining the continuance of the Cement Manufacturers Protective Association and enjoined it and the several defendants from engaging in the activities of which the Government complains and of which a summary account will presently be given.

The Association was organized in January, 1916. Its purposes, as described by the constitution, were the "col-

lection and dissemination of such accurate information as may serve to protect each manufacturer against misrepresentation, deception and imposition, and enable him to conduct his business exactly as he pleases in every respect, and particularly free from misdirection by false or insufficient information concerning the following matters, to wit:

(a) Information concerning credits;

(b) Information concerning contracts which have been made for the delivery of cement sufficiently complete to enable the manufacturer to protect himself against spurious contracts and like transactions induced by misrepresentations;

(c) Information concerning freight rates on cement;

(d) Statistical information as to production; stocks of cement and clinker on hand, and shipments."

The constitution also provides that "membership in the Association shall be recognized as implying that the member is absolutely free to conduct his business exactly as he pleases in every respect and particular."

Cement is a thoroughly standardized product. It is manufactured from limestone and shale which are crushed to extreme fineness, then subjected to high temperatures, which process produces a fused mass which when cooled is known as clinker. The clinker is then ground into the finished product which is then ready for transportation and use. Clinker is not subject to deterioration, but the ground clinker or cement deteriorates rapidly on exposure to moisture and cannot be kept in storage except for a limited period of time. The defendant corporations are manufacturers of this product, which is shipped in interstate commerce principally within the areas of the several States in which the several defendants are located, and they are competitors in the business of shipping the product in interstate commerce. From 60% to 65% of the total product of the several corporate defendants is sold

to the general trade for immediate use. Of this 60% to 65% approximately two-thirds is sold to dealers who are allowed a differential from the sales price to the retail trade.

The activities of defendants on which the Government bases its case for an injunction may summarily be stated as follows: The Government charges that the defendants, through the activities of the Association, control prices and production of cement within the territorial area served by the several defendants in the following manner:

(1) By the use of "specific job contracts" for future delivery of cement, accompanied by a system of reports and trade espionage having as its objective the restriction of deliveries of cement under those contracts.

(2) By compiling and distributing, among the members, freight-rate books which give the rate of freight from arbitrary basing points to numerous points of delivery within the territorial area served by the several defendants;

(3) By exchange of information concerning credits;

(4) By activities of the Association at its meetings.

The Government asserts that uniformity of prices and limitation of production are necessary results of these activities of the defendants. It does not, however, charge any agreement or understanding between the defendants placing limitations on either prices or production. The evidence does not establish that prices were excessive or unreasonable, and the District Court found "as compared with the rise of prices of other basic commodities, it is possible to say that the quotations of cement advanced less than others." The court also found that competition had not been destroyed by the Association and that upon many occasions the defendants were active in endeavoring to take business from companies associated with them. The court, however, held that the activities of the defendants in connection with specific job contracts tended to

limit the amount of cement distributed to the trade under those contracts; that the exchange of information complained of generally tended to limit production; that the dissemination of this information, especially that contained in the freight-rate book, tended to produce uniformity in price, and that there was accordingly a restraint of commerce within the principles laid down in *American Column & Lumber Co.* v. *United States*, 257 U. S. 393; *United States* v. *American Linseed Oil Company*, 262 U. S. 371.

It is conceded, and the court below found, that before the organization of the present association there was substantial uniformity of trade practices in the cement trade, so far as is pertinent to the present discussion, in the following respects:

(1) The sale of cement by specific job contracts for future delivery;

(2) The selling of cement, f. o. b. delivery;

(3) Using freight basing points in the quotation of prices;

(4) Including in all quotations for sale of cement, a freight rate from a basing point to the place of delivery;

(5) Charging purchasers of cement for bags in which the product is shipped and allowing credit for bags returned to the manufacturers in good condition.

Since there is no exchange of information among the defendants with respect to contracts for the sale of cement for immediate delivery, which constitutes more than 60% of the business, the Government's contention before this Court centered upon the use of the specific job contract by defendants and their activities in connection with such contracts, since without the use of the specific job contract the other activities complained of could have no substantial bearing on restraint of competition with respect either to prices or production. It will therefore be necessary to

consider more at length the activities of the defendants in connection with specific job contracts and incidentally their other activities as related to sales of cement under specific job contracts and the information exchanged with respect to such contracts.

Specific job contracts.

The specific job contract and the practices of the trade with respect to making deliveries in performance of those contracts were customary in the trade long before any of the collective activities complained of in this case. We do not understand the Government to contend that the use of specific job contracts by defendants, or that their use generally by the trade, is the result of any agreement or understanding, or in itself constitutes any violation of the Sherman Law. It is contended that the violation arises rather from the co-operation among the several defendants in acquiring and distributing information with reference to specific job contracts and the effect of the dissemination of that information on the trade, to which reference will now be made.

The specific job contract is a form of contract in common use by manufacturers of cement whereby cement is sold for future delivery for use in a specific piece of construction which is described in the contract. As was stated in the opinion of the court below, they are contracts "whereby a manufacturer is to deliver in the future, cement to be used in a specific piece of work, such as a particular building or road, and the obligation is that the manufacturer shall furnish and the contractor shall take only such cement as is required for or used for the specific purpose." These contracts have, by universal practice, been treated by cement manufacturers as, in effect, free options customarily made and acted upon on the understanding that the purchaser is to pay nothing until after

the delivery of the cement to him; that he is not obligated in any event to take the cement contracted for unless he chooses to; that he is not held to the price named in the contract in the event of a decline in the market price; whereas the manufacturer may be held to the contract price if the market advances and may be held for the delivery of the full amount of cement required for the completion of the particular piece of construction described in the contract. The practical effect and operation of the specific job contract therefore is to enable contractors who are bidding upon construction work to secure a call or option for the cement required for the completion of that particular job at a price which may not be increased, but may be reduced if the market declines. It enables contractors to bid for future construction work with the assurance that the requisite cement will be available at a definitely ascertained maximum price.

In view of the option features of the contract referred to, the contractor is involved in no business risk if he enter into several specific job contracts with several manufacturers for the delivery of cement for a single specific job. The manufacturer, however, is under no moral or legal obligation to supply cement except such as is required for the specific job. If, therefore, the contractor takes advantage of his position and of the peculiar form of the specific job contract, as modified by the custom of the trade, to secure deliveries from each of several manufacturers of the full amount of cement required for the particular job, he in effect secures the future delivery of cement not required for the particular job, which he is not entitled to receive, which the manufacturer is under no legal or moral obligation to deliver and which presumably he would not deliver if he had information that it was not to be used in accordance with his contract. The activities of the defendants complained of are directed toward securing this information and communicating it

to members and thus placing them in a position to prevent contractors from securing future deliveries of cement which they are not entitled to receive under their specific job contracts, and which experience shows they endeavor to procure especially in a rising market.

Members are required to make to the secretary of the Association prompt reports of all specific job contracts, describing in detail the contract and giving the name and address of the purchaser; the amount of cement required, the price and delivery point; also the date of expiration of the contract. They are also required to make detailed reports of all changes in the contract, including increases in the amount of cement to be delivered and cancellations. The Association also employs "checkers" whose business it is, by actual inspection and inquiry, to ascertain, so far as possible, the amount of cement required for specific jobs referred to in specific job contracts, and whether cement shipped under specific job contracts is actually used or required for use under such contracts. Without entering into any detailed discussion of this phase of the activity of defendants, we accept fully the Government's contention that the defendants regularly take all practicable steps to ascertain whether cement contracted for under the specific job type of contract was actually being used for the job described in the contract, and that the fullest information with respect to such contracts and the use of cement shipped under said contracts is reported to the members of the Association through the mediation of the secretary.

The Government does not contend that the activities of the Association with respect to specific job contracts diminished the number of such contracts, or that they diminished in any way the obligations of members of the Association upon such contracts. There is, however, abundant evidence to show that there were actual cancellations of deliveries on the ground that contractors were

not entitled, under the terms of their contracts, to receive such deliveries. In 1920, of 1,392 contracts investigated and found to be "padded" to the extent of more than 3,500,000 barrels of cement, 978 were partially cancelled to the extent of 2,014,653 barrels.

The Association freight-rate book.

The custom in the cement trade of selling cement at a delivered price which includes the mill price, the price of bags and freight charges, was an established trade practice before the organization of the defendant association. As required by the by-laws of the defendant association, it has distributed to its members freight-rate books, listing freight rates from established basing points to practically every city and town in the northeast section of the United States. The freight rates contained in the freight-rate book are compiled from the official tariffs and translated from the rate per ton of the official tariffs into the rate per barrel of 380 pounds, the unit for the sale of cement. Similar lists of freight rates embracing substantially the same subject matter were prepared and used by individual manufacturers before the organization of the defendant association. The association freight-rate book took the place of previous separate publications by individual manufacturers, with a consequent saving of money and increase of accuracy and a more thorough and continuous checking of rates. The basing points from which freight rates were calculated were not selected by the Association, but were the same as those appearing in prior books published by individuals before the publication of the Association freight-rate book. The basing points are points of actual shipment from which the larger proportion of the cement in a given locality in which cement is manufactured is actually shipped. The rates published are the actual rates omitting fractions of cents between the basing points and actual points of delivery.

Manufacturers customarily, and for the purpose of the convenient conduct of their business, maintain a uniform base or factory price, so far as the customers of the individual manufacturer are concerned. That is to say, the business is conducted on a "one-price" basis. In order, however, to determine the delivered price, there must be added to the factory price of a given manufacturer, the cost of transportation to the point of delivery. Prompt quotation of a delivered price therefore involves the ability to carry out promptly the mechanical process of adding to the mill price, the cost of transportation to the point of delivery. Lists of freight rates, in convenient and readily available form, are therefore necessary adjuncts to the quotation of delivery prices for cement.

The use of basing points for the purpose of computing freight rates appears not to have been the result of any collective activity on the part of defendants or cement manufacturers generally, nor were they arbitrarily selected. Their use is rather the natural result of the development of the business within certain defined geographical areas. When a manufacturer establishes his factory at a given point of production and sells his product in a territory which is contiguous freightwise to his factory, other mills established in the vicinity and serving the same territory, in order to compete in that territory, must either secure a like freight rate or they must sell at a mill price which will permit them to deliver cement at a price which will enable them to compete with the mill or mills located at the basing point which is the principal point of production in the territory which is contiguous in point of freight rate to the basing point. If such competing mills secure the same freight rate through the adoption of a blanket freight rate by the Interstate Commerce Commission, as was done in the Lehigh Valley, the rate from the basing point would in every case be identical with the freight rate for the competing mills. If there were no

blanket freight rate the competing mills must still use the rate from a given basing point in order to compete with the mills located in the vicinity of that chief point of production. In either case the freight rate from the basing point is an essential element in making a delivered price, since selling by any particular manufacturer at the lowest of the delivered prices computed from several basing points is a necessary procedure in competing in the sale of cement. The freight-rate book, therefore, not only enables the manufacturer to calculate a delivered price on the basis of his own mill price, which he determines, to points in the territory nearest in point of freight rate to his own mill, but it enables him also to determine at once the freight differential which he must offset in his mill price in order to compete with other manufacturers serving any other given territory.

Exchange of information concerning credits.

Members of the Association render monthly reports of all accounts of customers two months or more over due, giving the name and address of the delinquent debtor, the amount of the overdue account in ledger balance, accounts in hands of attorneys for collection, and any explanation, as for example when the account was treated by the debtors as offset of a balance due for bags, or was otherwise disputed. There are also reports showing the general total of delinquent accounts in comparison with those for the last twelve months, and reports of payments of accounts placed in the hands of attorneys. There was a form, seldom used, for answering inquiries as to whether a particular name had appeared in the monthly report, and if so, where. There were never any comments concerning names appearing on the list of delinquent debtors. The Government neither charged nor proved that there was any agreement with respect to the use of this informa-

tion, or with respect to the persons to whom or conditions under which credit should be extended. The evidence falls far short of establishing any understanding on the basis of which credit was to be extended to customers or that any co-operation resulted from the distribution of this information, or that there were any consequences from it other than such as would naturally ensue from the exercise of the individual judgment of manufacturers in determining, on the basis of available information, whether to extend credit or to require cash or security from any given customer.

Statistical information.

The statistical activities of the Association, other than those relating to specific job contracts which have already been referred to, dealt with information as to existing supplies of cement and the so-called bag report, which gave information concerning returned bags which are the usual containers in which cement is shipped and delivered.

Each member of the Association, in addition to the reports on specific job contracts already referred to, sends to the Association a monthly statement of its production of clinker and ground cement, shipments and stock on hand for the past month and for the corresponding periods of the previous year. These were compiled and distributed to members without any change or comment. In addition, semi-monthly statements of shipments were also received and likewise distributed. Each member of the Association was thus given full information as to the available supply of cement and by whom it was held.

By universal practice, the price of bags in which cement is shipped is included and becomes a part of the mill base price. This is usually at the rate of ten cents per bag. The bag reports were made quarterly and contained two items; the total number of bags returned by each member

during the preceding quarter and the percentage thereof found unfit for use. The reports show that the loss varied from about ¾ of 1% by one manufacturer to about 4½% by another, and the diversity continued throughout the period covered by the reports. In 1918 a questionnaire was sent out enquiring as to the practice of each company, to determine whether better results were obtained by cleaning before or after counting, showing that some counted before cleaning and some after cleaning, and some both before and after. No information was reported concerning the charge and allowance or deposit for bags returned, or concerning the number received from any particular customer, or the portion found unfit for use.

Meetings.

The constitution and by-laws of the Association provided for monthly meetings. A full and accurate stenographic report of all discussions at meetings was kept and made available to the Government and, as is stated in the Government's brief, "the Association's counsel was present at every meeting to steer the discussions away from illegal subjects and to have them confine the matters strictly within the purview of the by-laws and the constitution of the Association." During the only period of rising markets since the relinquishment of war control, the spring and summer of 1920, no meetings were held during July and August. The later minutes contained complaints at smallness of attendance, and the number of companies represented at meetings varied from eleven to seventeen, with an average attendance of about two-thirds of the total membership of nineteen corporations. There was no discussion at these meetings of current prices; no comment on conditions or as to prospect of market, production or prices. Excerpts from the minutes are set out by the Government's brief at great length in-

dicating that from time to time individual representatives of the companies expressed themselves on subjects of minor importance; such as return of bags and bag reports, discounts, the use of trade acceptances where customers desired more than the customary thirty days' discount. But with reference to these suggestions and discussions, either no action was taken, or action was taken adverse to the suggestions made. There is no evidence that any agreement was reached affecting any of the matters discussed; nor does the Government point specifically to any uniformity of trade practice or custom followed, which is urged as even inferentially the result of activities at meetings.

Legal consequence of defendants' activities.

From these various activities of the defendants, the Government deduces a purpose to control the price of cement, which it is charged was to be accomplished by the control of the supply of cement on the market and by intimate association of the defendants in the exchange of information and a ready means of quoting a delivered price at any point. Cement was to be kept from the market by the use of the specific job contract accompanied by the systematic gathering and reporting of information with reference to the specific jobs and the amount of cement required for their completion. The two essential elements in the conspiracy to restrain commerce charged therefore are (a) the gathering and reporting of information which would enable individual members of the Association to avoid making deliveries of cement on specific job contracts which by the terms of the contracts they are not bound to deliver, and (b) the gathering of information as to production, price of cement sold on specific job contracts and transportation costs, not differing essentially from similar information disseminated by the Maple Flooring Association which is the subject of

the opinion in *Maple Flooring Association* v. *United States*, decided today, *ante* p. 563.

That a combination existed for the purpose of gathering and distributing these two classes of information is not denied. That a consequence of the gathering and dissemination of information with respect to the specific job contracts was to afford to manufacturers of cement, opportunity and grounds for refusing deliveries of cement which the contractors were not entitled to call for,—an opportunity of which manufacturers were prompt to avail themselves—is also not open to dispute. We do not see, however, in the activity of the defendants with respect to specific job contracts any basis for the contention that they constitute an unlawful restraint of commerce. The Government does not rely on any agreement or understanding among members of the Association that members would either make use of the specific job contract, or that they would refuse to deliver "excess" cement under specific job contracts. Members were left free to use this type of contract and to make such deliveries or not as they chose, and the evidence already referred to shows that in 1920 padded specific job contracts were cut down something less than two-thirds of the total amount of the padding, as a result of the system of gathering and reporting this information. It may be assumed, however, if manufacturers take the precaution to draw their sales contracts in such form that they are not to be required to deliver cement not needed for the specific jobs described in these contracts, that they would, to a considerable extent, decline to make deliveries, upon receiving information showing that the deliveries claimed were not called for by the contracts. Unless the provisions in the contract are waived by the manufacturer, demand for and receipt of such deliveries by the contractor would be a fraud on the manufacturer; and, in our view, the gathering and dissemination of information which will enable

sellers to prevent the perpetration of fraud upon them, which information they are free to act upon or not as they choose, cannot be held to be an unlawful restraint upon commerce, even though in the ordinary course of business most sellers would act on the information and refuse to make deliveries for which they were not legally bound.

In *Swift & Co.* v. *United States*, 196 U. S. 375, 395, this Court approved a decree which provided that defendants should not be restrained "from establishing and maintaining rules for the giving of credit to dealers where such rules in good faith are calculated solely to protect the defendants against dishonest or irresponsible dealers." Distribution of information as to credit and responsibility of buyers undoubtedly prevents fraud and cuts down to some degree commercial transactions which would otherwise be induced by fraud. But for reasons stated more at length in our opinion in *Maple Flooring Association* v. *United States*, *supra*, we cannot regard the procuring and dissemination of information which tends to prevent the procuring of fraudulent contracts or to prevent the fraudulent securing of deliveries of merchandise on the pretense that the seller is bound to deliver it by his contract, as an unlawful restraint of trade even though such information be gathered and disseminated by those who are engaged in the trade or business principally concerned.

Nor, for the reasons stated, can we regard the gathering and reporting of information, through the co-operation of the defendants in this case, with reference to production, price of cement in actual closed specific job contracts and of transportation costs from chief points of production in the cement trade, as an unlawful restraint of commerce; even though it be assumed that the result of the gathering and reporting of such information tends to bring about uniformity in price.

Agreements or understanding among competitors for the maintenance of uniform prices are of course unlawful

and may be enjoined, but the Government does not rely on any agreement or understanding for price maintenance. It relies rather upon the necessary leveling effect upon prices of knowledge disseminated among sellers as to some of the important factors which enter into price. It is conceded that there is a substantial uniformity of price of cement. Variations of price by one manufacturer are usually promptly followed by like variation throughout the trade. As already indicated, the larger proportion of the product of the defendants is distributed through dealers, and prices to dealers are not reported to or through the Association. It is contended by the Government that the report of prices on specific job contracts in effect informs the members of the Association of prices to dealers, since the differential allowed to dealers is well known in the trade. However this may be, the fact is that any change in quotation of price to dealers, promptly becomes well-known in the trade through reports of salesmen, agents and dealers of various manufacturers. It appears to be undisputed that there were frequent changes in price, and uniformity has resulted not from maintaining the price at fixed levels, but from the prompt meeting of changes in prices by competing sellers.

It is urged by the defendants that such uniformity of price as existed in the trade was due to competition. They offered much evidence tending to show complete independence of judgment and of action of defendants, by large expenditures in competitive sales efforts and by variations in the volume of their production and shipment, earnings and profits. A great volume of testimony was also given by distinguished economists in support of the thesis that, in the case of a standardized product sold wholesale to fully informed professional buyers, as were the dealers in cement, uniformity of price will inevitably result from active, free and unrestrained competition; and the Government in its brief concedes that "undoubtedly

the price of cement would approach uniformity in a normal market in the absence of all combinations between the manufacturers."

We realize also that uniformity of price may be the result of agreement or understanding, and that an artificial price level not related to the supply and demand of a given commodity may be evidence from which such agreement or understanding, or some concerted action of sellers operating to restrain commerce, may be inferred. But here the Government does not rely upon agreement or understanding, and this record wholly fails to establish, either directly or by inference, any concerted action other than that involved in the gathering and dissemination of pertinent information with respect to the sale and distribution of cement to which we have referred; and it fails to show any effect on price and production except such as would naturally flow from the dissemination of that information in the trade and its natural influence on individual action.

For reasons stated in *Maple Flooring Association* v. *United States, supra,* such activities are not in themselves unlawful restraints upon commerce and are not prohibited by the Sherman Act.

The judgment of the District Court is reversed.

The CHIEF JUSTICE and MR. JUSTICE SANFORD, and MR. JUSTICE MCREYNOLDS in a separate opinion, dissented from the opinions of the majority in this case and the case next preceding. See *ante,* pp. 586, 587.
